Typical Single Unit Type C Softener. Vertical Style

FOREWORD

CRYSTALITE is a zeolite possessing those properties which enable it to meet the practical requirements of supplying zero hardness water with greater efficiency than has been attained heretofore. Its development is an interesting record, but telling the story is hardly possible outside the bounds of a purely technical treatise. For those who are interested in this phase of the subject a separate special treatise prepared by our technical staff will be sent upon request.

Crystalite

The Super Rapid Zeolite

Type C Water Softeners

INTERNATIONAL Type C Water Softeners are suitable for comparatively long runs between regenerations at high softening rates. High rate performance is made possible by the use of CRYSTALITE, a high speed, high capacity zeolite and an exclusive International Filter Co. product.

Many advantages found in these Type C Softeners have been desired for years but have never actually been attained before in zeolite water softeners. Only a general comparison of zeolites will be made here, for the purpose of this bulletin is to describe and illustrate Type C softeners so that their application to water supply conditions may be better understood.

Zeolite

Zeolite is a term that has come to be applied to all base exchange silicates used in water softening, although some are not zeolites if the mineralogical definition is strictly applied.

Among the "zeolites" that have been used are those made from various natural clays and sands, as well as the artificial zeolites made from fused and precipitated ingredients. More recent advances in the art are concerned with a zeolite made from concentrated solutions. The proper mixture of the solutions results in a gel which dries to a flint-like state, in which form the particles are sufficiently hard to scratch glass.

Control of Properties

One of the novel advantages in manufacturing the gel type of zeolite is the possibility of controlling the size, weight and capacity of the finished product. Size of zeolite particles, together with weight—that is, *its effective weight in water*—is most important; for it is by means of these factors that the zeolite bed is made practical in the apparatus.

Compared to greensand, the particles of which are very small, the grains of CRYSTALITE are giants. Were it not for the fact that usually several of the tiny greensand grains are held together as one by a foreign clay or cement-like binder, they could hardly be used. When separated by wear or use, they pass away, being too small to be retained by any mechanical means.

Greensand is used in making this comparison because no control of size can be brought to bear in its preparation. It is necessary to take it as it occurs. The most that can be done is to screen or wash out the single small nodules and save the larger usable grains. Whether these larger particles will hold together for any length of time is a question. Certainly they break apart with use and this fact accounts for the increasing pressure losses experienced by all users of greensand softeners.

As lower backwash rates become necessary in order that the fine greensand may be retained in the apparatus, serious packing with consequent high pressure loss occurs. While the retained fine material continues to soften some water, it accomplishes this result with increasing cost. This packed condition which brings about uneven contact between hard water and greensand explains the reason for short capacity runs. The usual results of this condition are the necessity for more frequent regeneration, the use of more salt, greater waste of wash water and, of course, greater pumping costs to overcome the drop in pressure.

The average size of CRYSTALITE grains is much greater than that of greensand and the CRYSTALITE grain is not made up of several smaller granules which tend to separate with use. CRYSTALITE grains are sharp cornered and irregular in shape. These factors lessen the tendency of CRYSTALITE to pack to such a great extent that the pressure losses through a bed of CRYSTALITE are only a fraction of those through a bed of greensand of the same depth and at the same rate of flow. It is obvious, therefore, that high softening rates are possible with CRYSTALITE while the rates for greensand must be greatly limited.

Works and General Offices

Why Greensand Came Into Use

Greensand came into general use because of its then comparatively rapid softening activity and quick regeneration. While possessing these characteristics, it has at the same time proved to be limited in total capacity—thus for a given amount of water per day, several regenerations are required in order that the apparatus may be of reasonable size and cost.

Zeolites that preceded greensand were abandoned largely because of their much slower softening activity, not because they were inferior, as several of them were of much greater total capacity than greensand. Also the durability of these early zeolites was beyond question for there are notable cases of where they have operated successfully for periods of over ten years time.

The following comparison is made frankly and with due regard for all greensand including VERDITE, the superior greensand used for over five years by the International Filter Co. The main purpose is to make plainer to those interested in zeolite softeners just how the super-rapid properties of CRYSTALITE, and its greater total capacity are a decided advance. These points are dealt with in the following pages.

Advantages of Greater Capacity

Although the depth of the zeolite bed in the apparatus may be varied somewhat, this dimension of the bed is not varied so much as the cross-sectional area. Usually the sectional area is circular because most zeolite softeners are cylindrical. Although many are operated in vertical position, some are placed in a horizontal position solely to obtain greater area in a single unit. In this position the shape of the cross-section is of course, more nearly rectangular.

It is the area that must vary in proportion to the flow required in gallons per hour. For example, a softener of 5000 gallons per hour must have twice the area of one 2500 gallons per hour, etc. The unit of area, therefore, as in filter practice, becomes the unit by which the size of a water softener is reckoned, and the unit of area is the square foot. A bed of greensand of standard depth and one square foot in area has a capacity of about 10,000 grains of hardness calculated as calcium carbonate. This means simply that it will soften 500 gallons of 20 grain water or any number of gallons which, multiplied by the hardness in grains, will equal 10,000 grains—total of softening work. Each time this amount of work is done, the bed must be regenerated—a process requiring (1) a cleansing wash, (2) a contact with brine, and (3) a fresh water wash to expel the waste products of regeneration. Altogether, a square foot column of greensand consumes 50 to 60 gallons of water in the process of regeneration. The amount of water wasted is 10 to 12 percent of the capacity (500 gallons) with water of 20 grains hardness, and this percentage becomes higher as the hardness increases, because the capacity in gallons is reduced in the same proportion as the hardness increases and vice versa, while the amount of water required for regenerating is about constant. This item of waste water is an operating cost the same as salt or labor and is an important consideration especially with the harder waters.

View in the General Offices

CRYSTALITE with its much greater total capacity reduces this item of cost fully 50% and the reason is obvious. The softening work done by a square foot bed of CRYSTALITE of usual depth is twice that of greensand, or 20,000 grains, which is equal to 1000 gallons of water of 20 grains hardness. Since the bed of CRYSTALITE regenerates with substantially the same amount of waste water, namely 50 to 60 gallons, the waste is only 5 to 6 percent.

Another thing, the frequency of attention for regeneration is reduced to half that necessary for greensand.

When water itself is an item of cost, and it usually is even when pumped from a nearby free supply, the Type-C Softener cuts this cost item in half.

The Advantages of Greater Speed of Activity

Zeolites that preceded greensand were capable of handling water of 20 grains hardness at only slow rates of flow. The usual flow per square foot of area was about 85 gallons per hour. With greensand, this rate jumps to 300 gallons per hour and because of this quite radical increase one can readily reconcile the term "rapid rate" which came to be applied to greensand softeners.

Chart showing Pressure Losses at various rates of flow through Greensand Zeolite Softeners

Now because of a similar increase, CRYSTALITE softeners are termed "super-rapid," the rate per unit of area having been increased 100% over that of greensand to 600 gallons per hour on 20 grain water.

CRYSTALITE softeners of the same area as greensand softeners, therefore, possess twice the capacity per regeneration and 100% greater flexibility. Or to make the more practical comparison, CRYSTALITE softeners of the same capacity per regeneration as greensand softeners are of half the area and thus require less space for installation and are of equal flexibility in flow rate.

Also, because of the lesser area, the amount of water wasted per regeneration is 50% of that of the greensand softener.

Salt Consumption and Economy

The usual rating given to CRYSTALITE is 1000 grains of exchange capacity for each one-half pound of salt consumed. By varying the amount of salt used for regeneration, the capacity total in gallons may be varied considerably at will. This variation can cover a range of nearly 200% with the salt rate varying from .4 to .7 of a pound per thousand grains.

Thus it is possible to select a salt rate which will give a capacity fitting the soft water requirements of any shift or day. Also the selection of salt rate makes possible a constant supply of soft water regardless of the usual changes in hardness of the raw water.

Effective Size and Weight

The weight of a zeolite may be greatly misleading. To state that greensand weighs 90 pounds per cubic foot while CRYSTALITE weighs but 50 pounds per cubic foot sounds discouraging for the latter. The effective weight in water, however, is another subject entirely. While greensand is actually heavier on the scales than an equal volume of CRYSTALITE, the importance of effective size and relative weight in water must not be overlooked. The same is true of sands selected for filtration

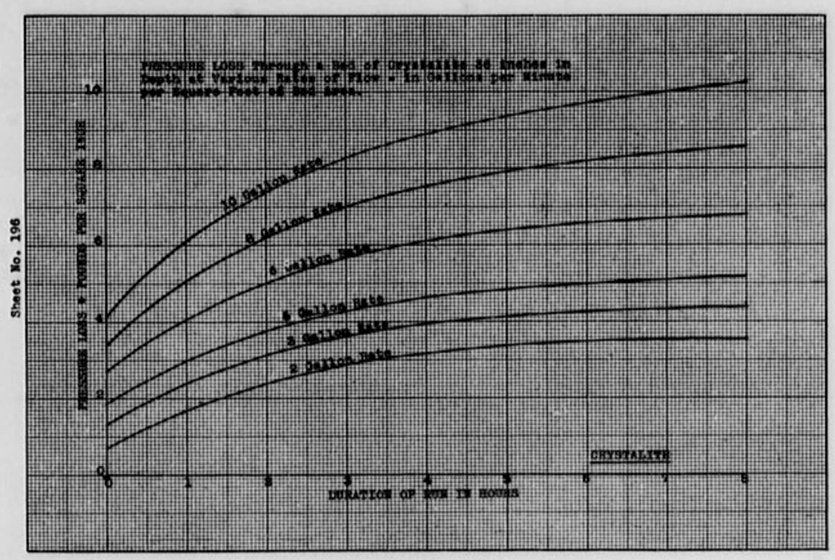

Chart showing Pressure Losses at various rates of flow through Crystalite Zeolite Softeners

work—many are rejected because the grains are too small to measure up to the effectiveness required.

It must be kept in mind that in a slowly rising column of water, very small particles of even a very heavy substance will tend to lift while larger particles of the same substance will remain unmoved. This is because the very tiny particle has more surface for its bulk and weight than a larger particle of the same substance; the surface friction of the passing water being greater in the case of the smaller particle, its tendency to move along becomes greater as the size of the particle diminishes.

Greensand has an effective size of 0.25 millimeters, and when many of the grains break up into the smaller particles of which they are composed, the effective size becomes so reduced that loss on back washing must occur; or if the wash rate is reduced to prevent this loss, then the bed becomes mud-like and almost impervious to the passage of water.

CRYSTALITE has an effective size of 0.45 or nearly double that of greensand. And while this difference is partially offset by the lesser dry weight of CRYSTALITE, the result is an effective weight in water slightly greater for CRYSTALITE than for the greensand grains of proper size.

This means that at the same washing and cleansing rate of flow, there is less tendency to expel CRYSTALITE with the waste water than is the case with greensand. Further, it is possible to greatly reduce this danger by increasing the effective size of CRYSTALITE, a matter entirely beyond the control of man in the case of the natural greensand.

Effect of Size on Resistance to Flow

It has been pointed out that the effective size of CRYSTALITE is nearly double that of greensand. A crude example will illustrate the effect of size upon the resistance to the passage of water. For instance, a tube of lead shot one-eighth inch in diameter will pass the same flow of water much more readily than the same tube filled with lead shot only one-sixteenth inch in diameter. The entire stream is more finely divided in the case of the

Capacity and Speed on 20 Gr. Water

Unit Capacity per Reg.	445 Gals.
Water to Reg.	65.4 Gals.
Waste Percent of Capacity	14.7%
Max. Rate of Softening	300 Gals p. Hr.
Pressure Loss at Max. Rate of Flow:	
(a) At Start	8.8 Lbs. p. Sq. In.
(b) After 1½ Hours	10.2 Lbs. p. Sq. In.

Views in the Works

smaller shot and, therefore, the resistance increases, because as the interspaces become smaller the surface friction becomes greater.

The shape of the particles also has an influence on resistance to water flow. In the case of the greensand, the grains are regular in shape and fit together better to form a more nearly solid mass. On the other hand, CRYSTALITE grains are irregular in shape; do not fit together so readily; and thus give freer passage to flowing water in and among the grains.

The accompanying loss of head curves indicates the advantage of CRYSTALITE with its lesser resistance. Better pressure for soft water distribution to points of use is one result. When pumps must be used for such distribution, CRYSTALITE requires a lower pump pressure and therefore a lower pumping cost.

Type C Softener Construction

The design and construction of Type C International softeners, leave nothing to be desired. Every detail is properly cared for in itself and in its relation to the complete equipment. Simplified installation and operation are carried out to completion as should be expected of the International organization.

The Smaller Sizes

Vertical softeners of the C Type are built in two styles. The smaller sizes of this type are of our Style P design which applies to those having a diameter of 42 inches or less.

The Larger Sizes

All larger sizes ranging in diameter from 48 inches to 108 inches are of our Style S design. Description of these two general styles is given in sufficient detail to serve as a specification.

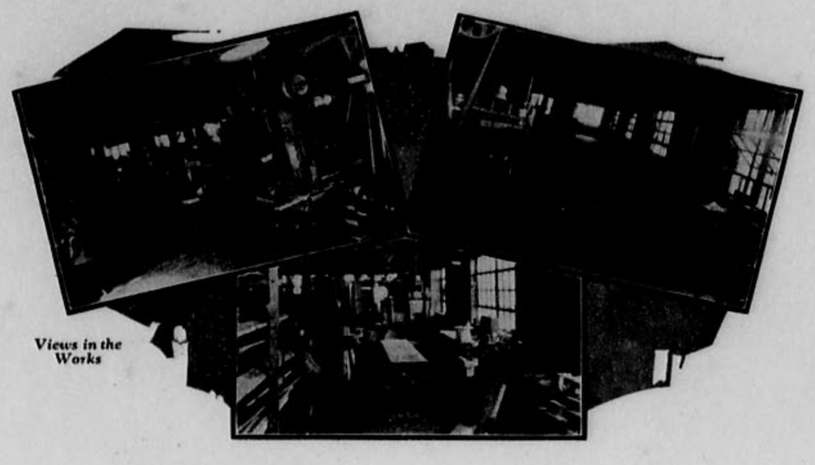

The Style P

Containers for Style P International Softeners are built for a working pressure of 100 pounds per square inch. While lighter metal could be used for these Style P sizes for lower working pressures, it is not deemed good practice to use it. Deterioration of these containers is mostly from the outside in, and is due to failure of users to apply protective paint after the original shop or field coats have worn out. Condensation which forms on all cold metal surfaces subjected to a humid atmosphere together with the exposure to air works havoc with metal. Without proper paint protection, renewed when

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

Library and Archives Canada / Bibliothèque et Archives Canada
www.collectionscanada.gc.ca

Views in the Works

necessary, serious rusting of the outside takes place, thus weakening the metal. For this reason heavier metal than required for ordinary pressures is used and the standard of these International Softeners is for 100 pounds working pressure.

Style P Container Design

The design of the Style P container takes into account the comparatively small inside space of these sizes, also the fact that assembly is often handled in the field without our supervision. To facilitate the field work of installing these sizes, no pipe underdrain is used, thus avoiding the usual concrete fill for the bottom and saving the time for the setting. Instead, these sizes are provided with heavy steel underdrain plate fitted with No. 3 International Tobin Bronze Strainers, the same as used in International filter plants. Spacing of the strainers is six inches center to center and the throat size is ¾ inch diameter.

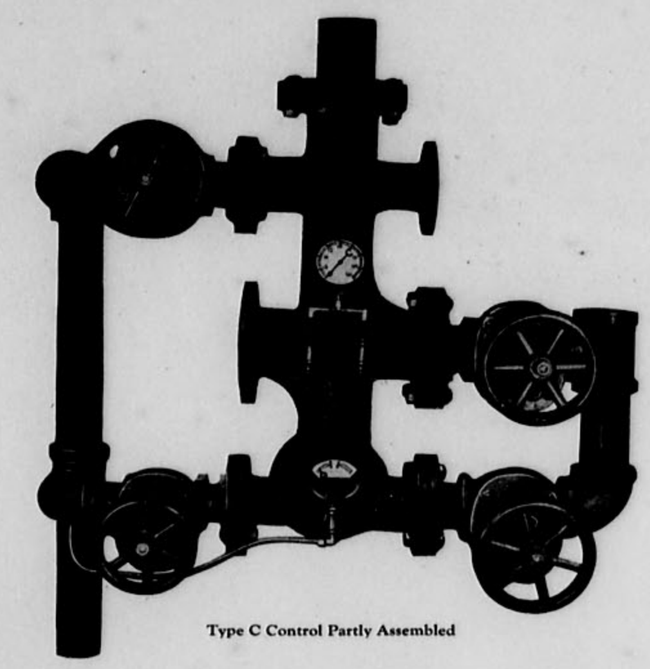

Style S Container Design

The larger sizes of the Style S design are built for a working pressure of 67 pounds per square inch. To save head room, the lower connection of these containers is placed in the side of the shell and made up to the central header of the underdrain consisting of lateral pipes spaced six inches center to center. The laterals carry No. 3 International Tobin Bronze Strainers placed six inches center to center in both directions. After the underdrain is assembled in the container, all under space is filled with concrete and the top cemented over to form a smooth floor for the softener bed. Only the strainers project through the cement from the underdrain to provide the necessary water passages to and from the softener bed.

The upper connection is in the center of the top container head which is provided with the necessary man-hole for access to the interior of the container. Immediately under the upper connection, a water stilling baffle is built into the container, requiring no assembly or attention during installation.

Supports

Containers of all Type C International Softeners are provided with supports requiring only plain level floor of proper thickness to carry the weight. Ball type flanges riveted securely to the bottom head prevent tipping and avoid the danger of injuring workmen engaged in setting containers when placed upon loose or jointed supports. The ball

Type C Control Partly Assembled

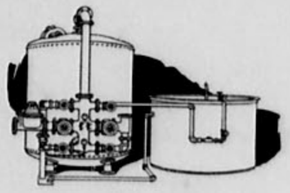

flanges rest upon heavy cast floor plate sockets extended sufficiently to give the necessary under clearance.

Type C Control

All main operating valves for each Type C International Softener Unit are furnished together with the necessary fittings, arranged in an assembly ready to be mounted on the softener front. Six main operating valves are required for the three simple operations of regeneration. Only two valves are open at a time, first—to backwash the unit, second—to admit the regenerating salt brine, and third—to wash out the waste products of regeneration.

While the Softener Unit is in service, its two main valves, inlet and outlet, are open, all others being closed. It will be noted that all valves are within easy reach and logically arranged so that operation is readily understood.

The use of a single cast manifold to which the operating valves are flanged provides for proper alignment, eliminates many screwed joints, and makes repair or replacement of any one of the valves possible without taking down the entire softener front. While this is a refinement of no great extra cost over other methods of building control assemblies, it illustrates the thought put into International design. Use of the cast manifold for the control assembly is standard practice with International Softeners of all sizes from 30-inch diameter up and of both Vertical and Horizontal Styles.

Indian Affairs. (RG 10, Volume 6310, file 654-5, part 4)

Flow Indicator Gauge

Flow Indicator

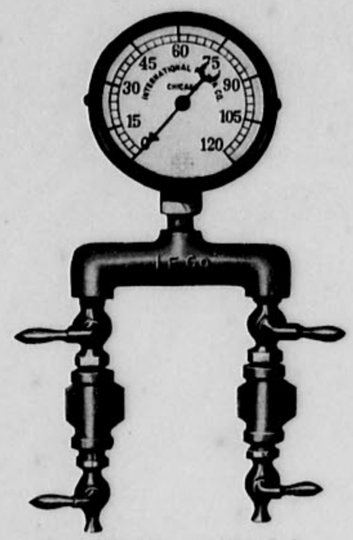

The control of each Type C Softener Unit is provided with a flow indicator gauge to guide the operator during the regeneration. It is necessary to backwash any filter type softener in preparation for the following salt brine regeneration. This is a process which is performed best and with most economical use of water, at a certain rate of flow. The Indicator of the International Softener tells the operator at a glance when the flow is exactly right. Adjustment in flow to the correct indicated wash rate may be made by slight increase or decrease in the wash valve opening.

The same Flow Indicator serves during the rewash operation—merely opening the rewash waste valve until the gauge registers proper flow for the operation is all that is necessary. The importance of performing the regeneration step as nearly alike each time as possible should not be left to the judgment of the operator. No man can look at a stream of water and state the quantity of flow with any degree of accuracy. The International Indicator Gauge completely eliminates the guess work; reduces the regeneration to routine operations which are always handled alike; and brings the resulting performance up to and maintains it at highest efficiency.

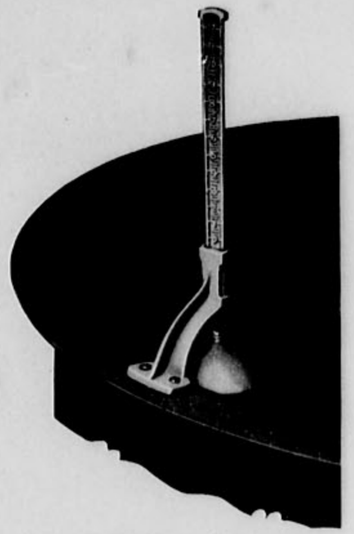

Interconnected Loss of Head Gauge and Test Cocks

Each Type C Softener Unit is provided with suitable pressure gauge interconnected and provided with cocks so that either inlet or outlet pressures may be registered. The use of one gauge for this double purpose is necessary on the International Softener because the usual difference in pressure between inlet and outlet is too little to be registered by two separate gauges or a duplex gauge of ordinary accuracy.

The main purpose of the loss of head gauge is to provide the operator with means for keeping track

Loss of Head Gauge and Test Cocks

Brine Draw-off Gauge

of the softener bed condition, especially during times of peak loads or during times when the turbidity of the raw water may be higher than ordinarily should be supplied to the softener.

The manifold connections for the loss of head gauge are provided with cocks for drawing samples

Statistical Department

of raw or soft water for test purposes, and, in all, with the centralized valve system, bring every means of control to the front of each softener unit.

Soft Water Meter

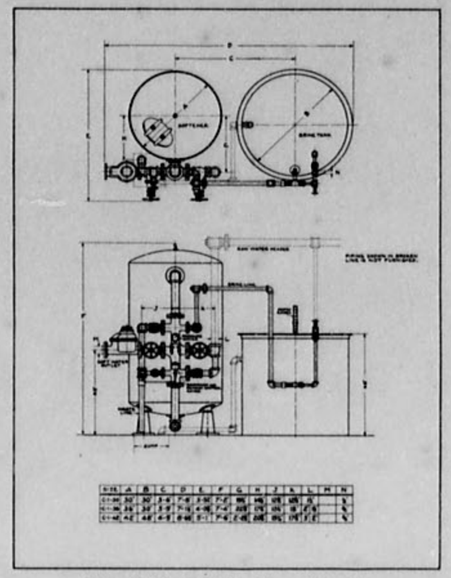

The meter supplied with each Type C Softener Unit is a standard make with straight reading register in Imp. Gallons, rate indicator hand, and set-back contact arm and connections for electric signal. Meters for International Softener Units are placed on the soft water outlet so that only clean soft water passes through same. This position of the meter avoids set back adjustments for regeneration water which would be necessary if the meter were placed on the inlet side.

Measure of water for backwashing and rewashing is provided for on the Type C Unit through the use of the Flow Indicator Gauge used to control these operations. It is possible, therefore, to keep a careful check at all times on the performance and cost of operating the International Type C Softener.

Type C – Single Unit – Sizes 30" to 42"

Salt Storage Brine Tank

The storage of salt for several regenerations is provided for in the International Steel Brine Tank. Although the standard brine tank is made 48 inches in height for convenience in recharging, tanks of any size or shape to better accommodate available space, or provide greater storage for salt, can be furnished. For unusual conditions, designs for salt storage will be drawn up so that purchasers may build their own brine tanks or reservoirs.

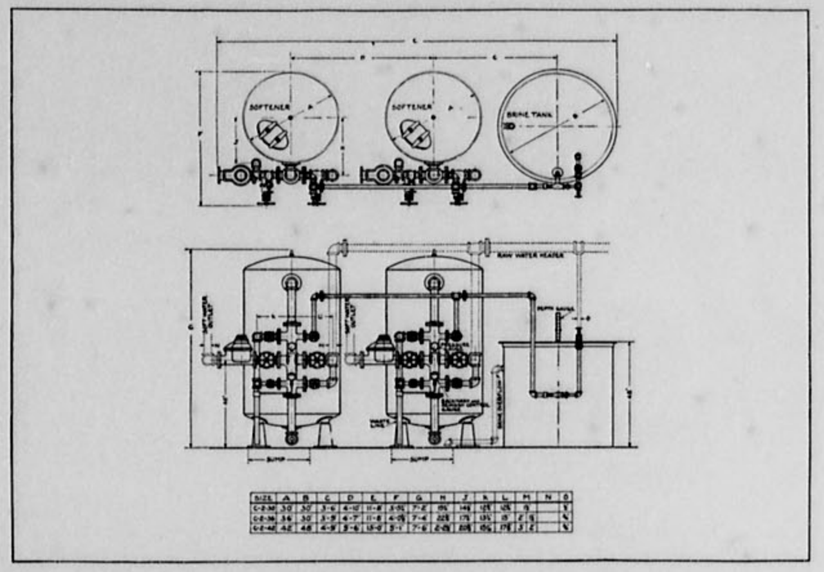

In addition to being a storage for salt, the International brine tank also serves as a saturated brine solution accumulator and measuring device. Each standard brine tank is fitted with an underdrain or draw-off system covering the entire bottom. This system is overlaid with a layer of ¾ in. x ⅜ in. filter gravel which supports the bed of salt above. The advantage of this method of construction is in avoiding the use of wooden or steel draw-off boxes which take up space and prevent uneven withdrawal of brine from the salt bed above. Also, more rapid withdrawal of brine is possible with assurance of obtaining saturated solution and therefore accurate measure of salt used each time.

Salt Handling and Measure

It is not necessary to measure or weigh the salt put into the brine tank. To assure saturated solution in the draw-off system, a bed of salt at least 10 to 12 inches deep must lie upon the layer of gravel at all times. The full charge of salt may form a bed 24 to 30 inches in depth, but should be replaced when used down to the least permissible depth stated above. Handling of salt for charging the brine tank is therefore a simple matter—a chore to be performed once in a week or ten days depending upon size of equipment, etc.

The actual measure of the salt is secured by drawing out of the tank a given amount of saturated solution for each regeneration. Since saturated solution of brine contains a fixed amount of salt per gallon or other unit of volume, measure of salt is secured volumetrically. This method of measure is not only extremely accurate, but is simple to handle.

A depth gauge and indicator mounted in the brine tank shows the exact number of inches of brine drawn out each time.

Type C—Double Unit—Sizes 30" to 42"

Brine Delivery

Delivery of the required amount of brine to the Softener unit undergoing regeneration is usually by hydraulic pump or ejector. The suction of the ejector is connected through the side of the brine tank to the draw-off system; pressure water is connected through a control valve to the ejector inlet; and the discharge of diluted brine is piped from the ejector to the brine inlet valve of the softener control front. Ejectors of generous size are supplied with the International brine system so that the quantity of brine required for a regeneration may be quickly handled to save time.

When water pressures are too low to operate hydraulic ejectors, or where the installation is sizeable, motor driven brine pumps may be used instead of ejectors. Such pumps may be started and stopped by remote control electrical devices when distant settings are required. When conditions are understood, we are pleased to submit drawings for most suitable arrangements of equipment required.

Quality of the Soft Water and Test

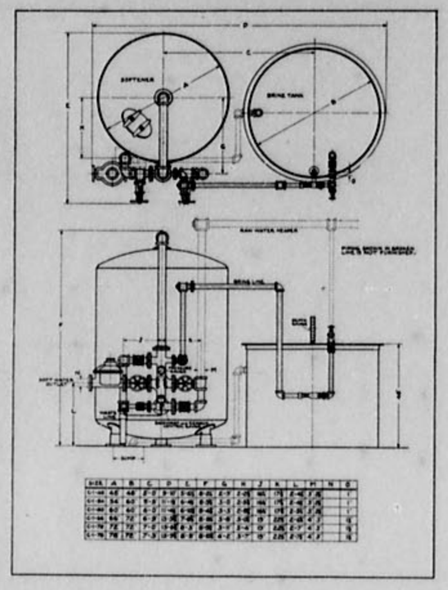

When the Type C Softener is installed and operated according to our written instructions, it produces a full capacity of zero hardness water. By zero hardness water, we mean water containing no lime or magnesia that can be detected by the ordinary analytical methods employed in water examination.

The field soap test should not be confused with or considered the equal in accuracy of the analysis performed in the laboratory. It is merely a rough, handy, and quick means of checking end points of softener operation. The test outfit furnished with the International Softener is arranged for making a quick, simple determination. The soap solution furnished for the test is made to such a standard that when two drops are required to form a permanent suds in a given amount of water contains 1.0 grain per Imp. Gallon, or 17 parts per million of hardness as Calcium Carbonate.

Indian Affairs. (RG 10, Volume 6310, file 654-5, part 4)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

Library and Archives Canada / Bibliothèque et Archives Canada
www.collectionscanada.gc.ca

Type C—Single Unit—Sizes 48" to 78"

Each additional drop in securing a permanent suds, after the first two have been used, counts as another grain of hardness.

The capacity soft water delivered by the International Softener requires but one drop of this soap solution for the test.

Zero-hardness Water Has Many Important Uses

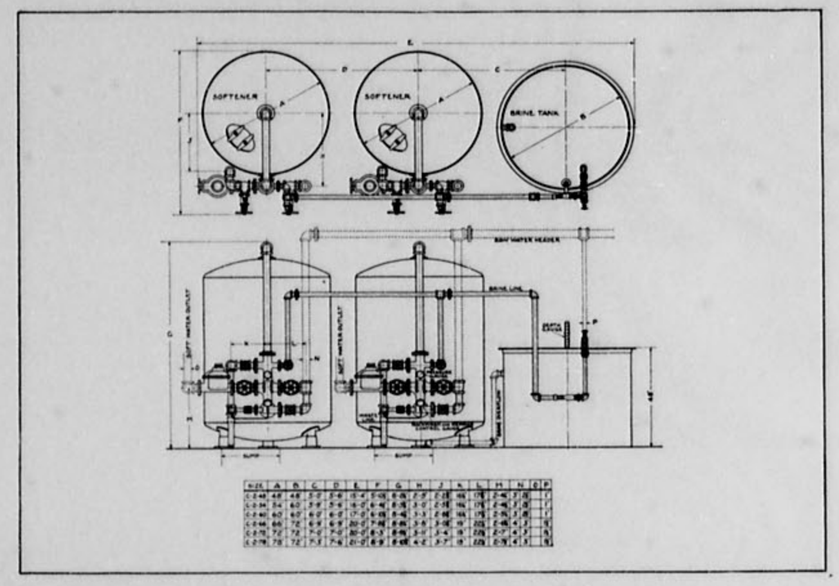

The Zeolite or base-exchange water softener has a wide range of application in practically every water-consuming industry or institution. The benefits from use of zero-hardness water are of far-reaching and enormous value. When actually measured and credited fairly to the softener, these benefits range in value often to the extent of several times the cost, in a year's time. In certain cases, operation without zero-hardness water, is so impractical that it becomes almost impossible.

A generally important benefit derived from zero hardness water, is prevention of scale in boilers, heaters, feed pumps, feed pipes and hot water distributing lines. Clean boilers and heaters use less fuel and operate longer without shut-down.

In laundering, as is obvious, water of zero hardness saves large percentages of soaps, alkalies, and other washing supplies, which are factors in cleansing operations. Much time and labor is also saved and what is equally important, the zero hardness water assists materially in improving and maintaining quality of work.

For textile processes, zero hardness water is one of the prime essentials. Uniformity of quality, color and finish all revert back to the condition of the water used. Uniform water of zero hardness becomes the basis of condition from which all work may have an even start. Although soft water saves enormous quantities of supplies, much additional benefit is derived through saving of time and labor, rejects, reruns, and spoils.

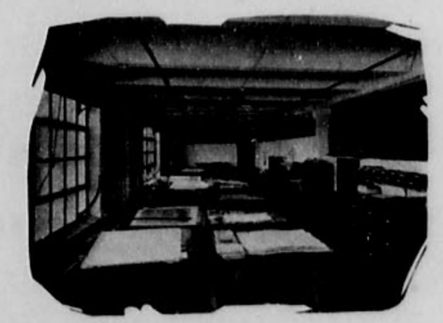

Institutions, such as hotels and hospitals, which have many water-consuming departments and extensive plumbing systems, use zero hardness water

Type C—Double Unit—Sizes 48" to 78"

with advantage all along the line. Hot water equipment and its maintenance are of no small importance, for service must be unfailing.

The laundering of the linens is of special importance. While there is saving of wash-room supplies with the zero hardness water, the life of linens is greatly increased and the cost of replacements reduced from a third to a half of the amount with hard water washing.

Drafting Room

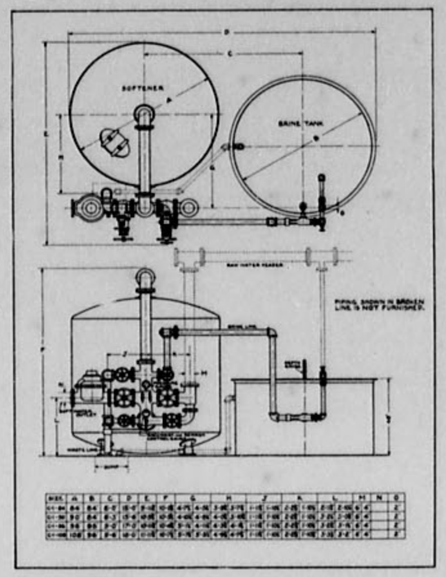

Special Industrial Uses for Water of Zero-hardness

1. Feed water for all types of boilers used in stationary steam power plants.
2. Feed water for railroad or locomotive boilers, crane boilers, steam shovel boilers, and the like.
3. For cooling steam or ammonia surface condensers.
4. For cooling internal combustion engines, furnace doors and jackets, air and ammonia compressors, transformers, steam turbine bearings, etc.
5. Absorption of ammonia gas for manufacture of aqua-ammonia.
6. For preparation of cutting oils.
7. For soap making.
8. For canning, expecially peas and beans.
9. For filter-char washing in sugar and syrup industries.

10. For preparation of beverages and certain extracts.

11. For tanning, expecially scouring of hides.

12. For wool scouring.

13. For dyeing, bleaching and finishing of all textile fabrics.

14. For automobile body washing.

15. For automobile radiators.

16. For preparing food products and many other purposes.

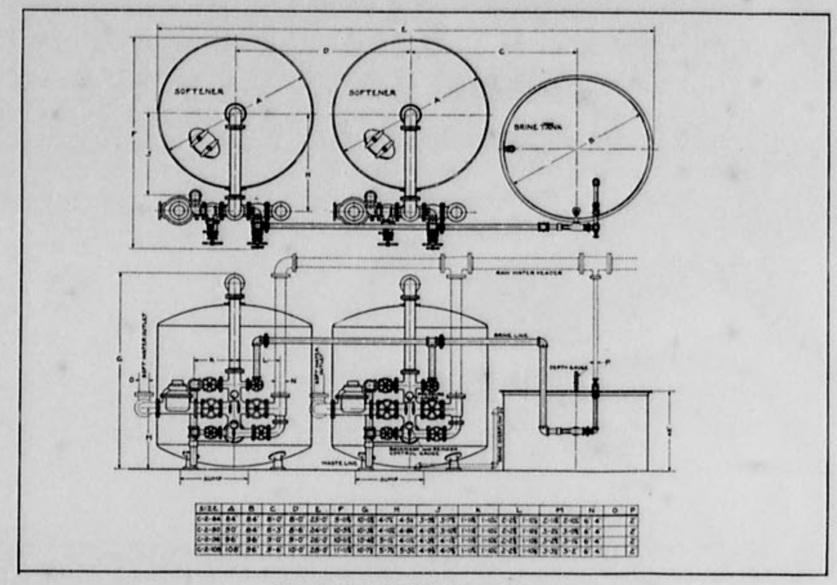

Soft Water for Municipalities

With a zeolite which lends itself to more economical operation, the application to city water supplies becomes possible. The two principal operating costs are for the salt used to regenerate the zeolite, and for the water used in the regeneration process.

The salt used for regeneration may be reduced to as low as one-third pound per 1,000 gallons of zero hardness water per hardness grain to the gallon. For instance, a water containing 15 Grains per Imp. gallon of hardness as $CaCO_3$, requires 5 pounds of salt per 1,000 gallons softened to zero hardness. Bulk salt in car lots ranges in price from $5.00 to $10.00 per ton delivered, depending considerably upon the freight.

The softening cost with such water ranges therefore, from $12.50 to $25.00 per million gallons. Further reduction in salt cost may be accomplished by by-passing enough of the hard or unsoftened water into the soft water lines to increase the hardness from zero to about 3 grains per gallon. With water of 15 grains hardness, as much as one gallon may be by-passed to every four gallons that are softened, thus diluting the hardness of the raw water down to 15 grains in 5 gallons, or 3 grains to one gallon. Incidentally, this reduces the softening cost 20%, bringing the figures for salt per million gallons down to $10.00 to $20.00 depending upon the salt cost.

Water cost for regeneration will vary greatly with the different types of zeolites. Since the

Type C—Double Unit—Sizes 84" to 108"

amount of water required per square foot of softener bed area is fairly well fixed, the amount will vary inversely with the total exchange capacity of the zeolite selected. It is this property of Crystalite—namely high total capacity which by inverse ratio results in low regeneration water cost—and the low salt cost that bring Crystalite to a practical possibility for municipal supplies.

While softener plants for this purpose are all of the same general principle as to operation, many different arrangements of equipment are possible. Either of two types of equipment, pressure or gravity, may be used, depending upon the nature of the water supply, methods of pumping, storage, etc., and the need for preliminary sedimentation and filtration.

Crystalite may be used in open gravity basins. The softener bed of Crystalite three feet in depth may be operated at rates up to four gallons per minute per square foot of area with a maximum water head of only eleven and a half feet. As with gravity filters, this total head may be partly positive and partly negative in order that the softener bed basins may be of the dimensions common to gravity filter basins, to which they are similar.

Surveys will be made and complete plans for plants of any capacity will be furnished to engineers, municipalities, or water companies having bona fide projects. A nominal charge for handling this work is made with the understanding that if the project is carried out and our equipment is used, the charge will be cancelled.

General information involving our broad experience in the design and application of plants of this kind will be gladly furnished without charge at any time.

For Homes

International Household Softeners using Crystalite assure the home of clean, clear soft water for all domestic purposes. Literature describing these softeners, of which several thousand are now in successful use, will be sent upon request.

FILTRATION

Early Methods:

History shows that there has always been a desire for clean clear water, at least for drinking purposes. The ancients often went to considerable effort to obtain their water supply from unpolluted springs or water sheds, sometimes at a considerable distance from the town. Rome was supplied with three qualities of water, the least best for general purposes, the next best for the fountains and washing troughs and the very best exclusively for drinking purposes.

Where turbid waters were, of necessity, used for drinking water there is record that porous sand stone and earthenware filters were used by the ancient Egyptians and also by the Japanese. There is also record of clarification of turbid water by syphoning the liquid from one vessel to another by the capillary action of porous material, such as a skein of wool.

Slow Sand Filters:

The practical application of filtration to entire public water supplies probably dates from about 1800. Records show that in about 1810 slow sand filters were installed in Scotland and that in 1829 one of the London water companies installed the first sand filter of this type. The eventual adoption of this system for all of the London water supply, and for many other English cities, led to its being called "The English system" as its use spread throughout Europe.

Slow sand filters are still used to a considerable extent in Europe and also in a number of localities in America. These filter plants consist of a number of beds of sand varying in size from one-quarter to one acre, usually rectangular in shape, and covered, if the winter temperature is lower than 32 degrees. The fine filter sand is superimposed on three or more layers of graded gravel, under which is a simple form of underdrain either of brick or tile. Each bed is provided with suitable piping to control the influent, effluent, etc.

Some waters may be put onto slow sand filters without any preliminary treatment, but in the great majority of cases preliminary sedimentation and sometimes sedimentation and coagulation are used to prepare the water for the filters.

With the slow sand filters an immense surface filtering area is necessary, because to obtain the desired results the rate of filtration should be maintained at about three million gallons per acre per day—although in some plants the rate is but half and in others twice that figure. As the sand used is of rather small grain size and the rate of flow very slow, the filter in itself acts as a strainer, taking out considerable suspended matter. However, with the slow sand filter the surface of the sand bed provides a place for great numbers of organisms to grow and develop. These form an adherent mass that holds back and collects the bacteria and organisms in the water. This mat or film (sometimes referred to as the "schmutzdecke") is the active part of the bed and until it has been formed the efficiency of the filter is very low. To "ripen" the filter bed, the slow sand filter is started at about one-third of its usual rate and then increased gradually so that not until three or four days later is the filter operated at its normal capacity.

Depending upon the character of the raw water, whether or not it has been given preliminary treatment, the rate of filtration, the maximum loss of head allowable, etc., the slow sand filter will deliver anywhere from 50,000,000 to 400,000,000 gallons per acre of filter area before cleaning is necessary.

The slow sand filter is cleaned by scraping and removing from the filter an inch or two of sand from the surface of the bed, the sand being washed and either placed back on the bed immediately or put in the storage bins and replaced after several scrapings and cleanings.

Slow sand filters are limited in use to handling waters of low turbidity and color and where sufficient ground area is available to provide for the immense filter beds and settling basins.

Rapid Sand Filters:

The first rapid sand or "mechanical" filters were built in the United States during the early 80's. They were installed by the paper industry to solve the problem of handling large volumes of water and removing the coarser particles of suspended matter that were spoiling their product.

These early filters consisted of cylindrical tanks provided with a simple strainer underdrain system, a bed of gravel and sand, wash water troughs and operating piping. They were not capable of removing the finer or colloidal suspended matter and had but little effect on removal of bacteria. However, they crudely served their purpose and represented an immense step forward because of savings in first cost and space required.

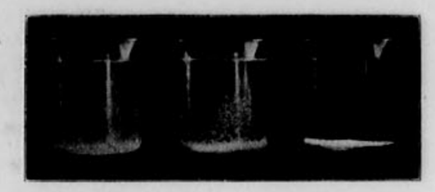

Rapid sand filters differ from slow sand filters not only in the rate of flow of water through the sand bed—but also in design, construction and operation. The smaller area of the filter unit, and consequently its more rapid clogging, requires means for rapid and automatic cleaning. The methods used to quickly wash the sand gave rise to the early term "mechanical filters." The high rate of filtration (125,000,000 gallons per acre per day—or even more) necessitates the use of a coarser and more uniform filter sand—as well as the formation of an "artificial mat" on top the sand bed.

When the introduction of chemical coagulants to gather together the finer suspended matter and to form this artificial mat gave such surprising results it immediately prompted many mechanical improvements. As a result of continual research and improvement the efficiency of the rapid sand filter has steadily increased until today it is the predominating type of filter throughout the world.

These improvements in the modern filter might be grouped under the following classifications:

- Proper coagulation.
- Efficient underdrain systems.
- Standardization of sizes and depth of the supporting gravel and filter sand.
- Proper wash water piping and troughs.
- Standardization of rates of filtration and backwash.
- Size and arrangement of control piping.
- Use of automatic rate controllers, gauges, etc.

To meet all these and other conditions, the modern rapid sand filter bears but little resemblance to its forerunner, the slow sand filter.

Upon adding the coagulant to a turbid water the alum is immediately decomposed and the finely divided suspended matter quickly gathers into coarse grained "flocs" that settle rapidly — leaving the water fairly clear.

Coagulation:

To make the rapid sand filter more than a *strainer* it is necessary to use a coagulant to provide an efficient mat on the surface of the filter bed—instead of the slowly accumulated organic slime or "schmutzdecke" of the slow sand filter.

And—if the water is very turbid—the coagulant must be added and sedimentation provided *before* the water passes to the filter, so as to remove the bulk of the suspended matter outside the filter, otherwise too frequent washing will be necessary.

The common coagulant is alum. Lump ammonium or potash alum for use in pressure coagulant feeders and aluminum sulphate (sometimes termed "filter alum") when the coagulant is made up and fed as a solution.

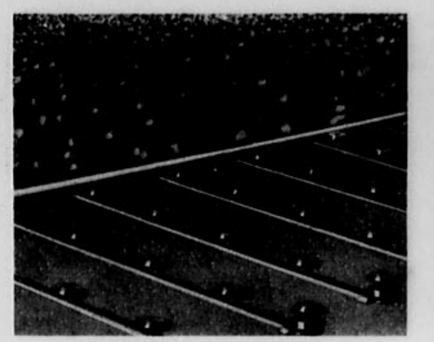

Practically all waters are alkaline and this natural alkalinity — calcium carbonate and magnesium carbonate—decomposes the alum with a resultant heavy white flocculent precipitate of aluminum hydrate. If the water is not naturally alkaline— (or its natural alkalinity has been exhausted by continuous circulation and refiltration as in swimming pool filter systems) —artificial alkalinity is added in the form of soda ash or lime—or in the form of sal-soda if a pressure alkalinity feeder is used.

The action of the insoluble gelatinous sticky aluminum hydrate can be compared to that of the white of egg in clearing coffee. It entangles all the suspended matter, absorbs the color, and gathers the finer particles into flocs that can be readily settled, or which are caught on the filter sand, being too large to pass through the spaces between the grains. The coagulum forms a gelatinous mat on the surface of, and in the

Underdrain system with International Umbrella Distributing Nozzles. The concrete subfill imbeds the lateral system to provide a smooth floor.

Underdrain system with the lateral pipes perforated on the underside. The concrete subfill stops an inch or so beneath the laterals.

upper part of the filter sand, constituting the real filtering medium.

During coagulation, the originally turbid or cloudy water undergoes a complete change in appearance, for in place of the murkiness the impurities become coarse grained and floculent, with the surrounding water itself fairly clear. It is then a comparatively simple matter to filter the water.

Underdrain Systems:

The underdrain system of a rapid sand filter serves a two-fold important purpose—to uniformly distribute the water during washing and to collect the filtered water without loss of sand. The underdrain actually consists of the gravel layers and the distributing manifold system.

Aside from supporting the sand bed—the gravel is the principal means of distributing the wash water and many cases of faulty filter operation can be traced to improperly graded, poor quality or not sufficient filter gravel.

To uniformly collect the filtered water—but more important—to uniformly supply the wash water to the underside of the gravel—is the purpose of the distributing manifold. The systems in common use are:

A pipe manifold system with bronze "strainers" or orifice nozzles screwed into the tops of the header pipe and laterals.

A pipe manifold system, the pipes perforated on the underside in either single or double rows.

The "Wagner Bottom"—distributing pipes with large perforations interspaced by slotted precast concrete blocks.

Concrete "hill and valley" with perforated bronze plate or perforated pipe in bottom of valley.

The "Wheeler Bottom" with balls geometrically placed in pyramidal hoppers.

"Strainers" or orifice nozzles in false metal or concrete bottoms.

Gravel Layers:

In order to properly support the filter sand, the filter gravel must be small enough at the top layer, and to diffuse the wash water—must be fairly large at the lowest layer around or on top the distributing manifold. Each grading must be of fairly uniform size and practically free from flat pieces. The gradation must be such as to prevent small pebbles from *falling* through lower layers.

Modern practice calls for as many as five and a minimum of three gradations ranging in size from 2½ inches at the bottom to ⅛ inch diameter at the top.

Filter Sand:

Silica sand, which was the first material used, is still the accepted filtering medium of today. Crushed quartz, crushed marble, charcoal, coke and screened anthracite coal have also been used—but usually to take care of some special conditions. Porous filter materials are to be avoided

Underdrain system of the International "Wagner Bottom" type. Slotted concrete blocks fit closely in between the distributing laterals.

as they cannot be washed clean and are breeding places for bacteria.

Whereas little attention was formerly paid to the quality and uniformity of filter sand, experience has proven that for proper results definite standards must be met and now this filtering medium must pass rigid tests and specifications.

Sand performs its function as a filtering medium through its ability to hold back the coagulum or floc containing the suspended and colloidal impurities in the water. Theoretically, the top surface of the sand performs this duty, and it is assumed in practice that none of the coagulum penetrates beyond a depth of six inches into the sand. It is customary to provide a depth of sand of from 18 to 24 inches in industrial filters, to as much as 30 inches in municipal filters, the latter extreme depth being required by the dictates of some boards of health or the individual practice of some engineers.

The sand bed should not be so shallow as to be easily channelled or broken through during filtering and yet not so deep as to offer unneeded resistance to the flow of water.

Suitability of a sand as a filtering medium depends upon its chemical character, freedom from clay, dirt, organic matter and other impurities and its uniformity. Unless it is of uniform size the smaller grains will pack in the voids between the coarser grains causing undue resistance to the flow of water. Well rounded grains are considered preferable to sharp grains because the former do not pack so readily and clean much better.

Two measures are used to draw a fairly accurate picture of the size and grading of filter sand. These two measurements are the Effective Size and Uniformity Coefficient.

By "Effective Size" is meant the size of the sand grains—usually expressed in decimal fractions of a millimeter—than which 10% by weight of the sand is finer and 90% coarser. Thus the "Effective Size" is the minimum size of the great bulk of the sand particles, but it does not indicate either the limits of coarseness, or the degree of variation in the size of the particles included in the 90%.

Therefore, in order to assure that the variation is not too great a second measurement of the sand is made. This is the size of sand grains than which 60% by weight of the sand is finer and 40% coarser. This size, divided by the "Effective Size" is called the "Uniformity Coefficient."

For example, if a screen analysis showed that 10% of a sand was finer than 0.40 millimeter, and 60% was finer than 0.64 millimeter,—the "Effective Size" would be 40 m.m. and the "Uniformity Coefficient" would be 0.64 divided by 0.40 or 1.6. Obviously, the more uniform the sand, the more nearly alike will be the sizes of grains than which 10% is finer and than which 60% is finer—or—the closer will the "Uniformity Coefficient" approach 1.0.

The most desirable "Effective Size" and "Uniformity Coefficient" depend upon the conditions of filter operation and the quality of filtered water desired. Modern practice calls for at least two gradings of filter sand. International filters are provided with silica sand of "Effective Size" of from 0.35 to 0.55 m.m.—as conditions warrant—and a "Uniformity Coefficient" of from 1.75 to 1.6.

When a filter is washed, the entire sand bed rises and grades itself—the finest particles on top, grading down to the coarsest at the bottom—so that such sand automatically produces the several size condition that is most desired.

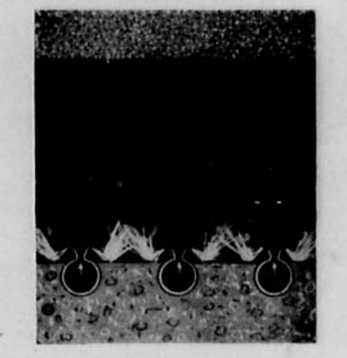

Chemical Requirements:

The filter bed must be insoluble in water and the usual specification for filter sand and gravel is that it shall not lose more than 5% in weight when treated with concentrated hydrochloric acid for 24 hours. This is principally to insure the absence of limestone, which, on account of its relative softness and appreciable solubility would not stand up under agitation during washing.

Distribution of wash water by International Umbrella Nozzles. No upward jet action. 360 degree distribution as water leaves umbrella cap and is deflected downward to concrete floor.

Distribution of wash water with perforated lateral system. Jet action is downward. Complete distribution accomplished by deeper coarse gravel bed.

Rates of Filtration:

The maximum rate of filtration depends upon the required quality of filtered water, the character and condition of the filter sand and the character of the water to be filtered. Water can be forced through a pressure filter at enormous rates if sufficient pressure is applied—but the water will not be filtered, in fact, at excessive rates the water will hardly be "strained," the coagulum will be driven deep down into the sand and the filter bed ultimately ruined.

For efficient operation and proper quality of effluent, the rate of filtration should be carefully controlled and rapid fluctuations avoided. Standard practice has set a rate of from two to three gallons per minute per sq. ft. of filter area as being a conservative rating. Lower or higher rates may be required or allowable under special conditions.

The standard specifications for pressure water filters, as approved by the American Waterworks Association and the American Society of Mechanical Engineers give the following rates of filtration as standard:

Whenever the water is to be used for domestic purposes or to secure full bacterial purification, the capacity shall be based on a rate of filtration not to exceed 2 gallons per minute per sq. ft. of filtering area and a coagulant must be used.

Rates of filtration for various uses should conform to the following schedule:

2 gals. per sq. ft. per minute for all supplies used for drinking, or for the preparation of food products.

2 to 4 gals. per sq. ft. per minute when filtering a treated municipal supply of approved bacterial purity.

2 to 4 gals. per sq. ft. per minute for swimming pools, and for all industrial uses.

2 to 5 gals. per sq. ft. per minute as conditions may warrant for double filtration, using sand followed by charcoal, where reduction of color, odor, taste or certain forms of iron is desired. This method of filtration is not to be applied for bacterial purification.

Washing:

Provision for proper washing of the sand bed is equally as important as the area of the filter. The filter retains what is removed from the water and will continue to work satisfactorily only so long as it is properly washed. A filter is usually run until the maximum allowable loss of head is reached—or until the desired rate can no longer be maintained. Therefore, at regular intervals the filter is cut out of service, the waste valve opened and water —preferably filtered water—admitted to the underdrain system at a rate sufficient to expand or float the sand bed, to scrub or scour the sand and to flush out the accumulated impurities.

From three to eight minutes washing are required to clean the sand bed—with six minutes as an average figure. From one to five per cent of the total water filtered is the usual amount of wash water used—with three per cent an average.

INTERNATIONAL

Distribution of wash water with "Wagner Bottom." Downward jet from distributing laterals changes to horizontal beneath the blocks. Perfect distribution when water passes out into gravel through slots.

Proper "freeboard" is essential as otherwise sand would be lost during washing if it is not enough or the impurities would not wash out if there is too great a freeboard.

The rate of flow of wash water required for efficient cleaning depends upon the size of sand, the system of washing, and the efficiency of the wash water distributing system. The modern —and simplest method of filter washing is the "high velocity" wash where the velocity of the water alone thoroughly scours and cleans the sand.

High velocity wash needs the most efficient form of distributing manifold system and proper gravel grading to prevent disturbance of the gravel layers and provide uniform distribution of wash water. The rate of flow of wash water required is 15 gals. per min. per sq. ft. of filter area (24 inches vertical rise per minute) although under certain conditions flow rates as low as 12 gals. per min. (19 inches vertical rise) have been found satisfactory.

Where insufficient water is available for high velocity wash—air or mechanical agitation may be used to loosen the filter bed. With such preliminary agitation effective washing requires wash water at a velocity of 12 to 15 inches vertical rise per minute (8 to 10 gals. per sq. ft.). The use of mechanical agitators is obsolete but the air wash system—if properly designed—will satisfactorily solve the occasional problem of insufficient wash water.

The proper rate of flow of wash water is most important—washing at low rates of flow for even long periods of time only wastes the water and does not clean the filter effectively.

Freeboard:

To prevent sand from being washed out with the impurities during backwashing, the waste outlet, trough or pipe should be a definite distance above the surface of the sand bed. This distance is designated as the "freeboard." This depends upon the depth of sand and size of sand (which determines the bed expansion) and the rate of washing. With modern filter design—the general rule is that the freeboard in inches approximates the wash rate in inches of vertical rise per minute.

Pressure Filters:

The use of pressure filters is as old as the practice of rapid sand filtration. The term "pressure" is used to designate that type of rapid sand filter wherein the filter bed is placed in a closed container, through which the water passes under pressure. This does not mean that high pressure is required to pass the water through the filter. To operate economically the pressure consumed is not more than five pounds at its maximum, with a minimum of about one pound directly after the filter is washed.

In comparison with gravity or open type rapid sand filters, the pressure filters have certain apparent advantages. Connection may be made in any pressure line without loss of pressure for water distribution except that consumed in the filter, as mentioned above. Repumping of the water after being filtered is not required. They may be quickly installed on simple foundations and usually fit into some available space. Settling basins and clear water storage can frequently be eliminated. Less precision in operation is demanded. The first cost is lower.

Battery of International Horizontal Pressure Filters

INTERNATIONAL PRESSURE FILTERS

Types and Sizes:

International Pressure Filters such as are shown in this bulletin are of two general types —vertical and horizontal. The vertical type International Filters range in size from 16 inches to 96 inches diameter. These sizes are used for homes, drinking water systems, hotels, apartment buildings and general industrial purposes. They may be used singly, in pairs or in batteries of three or more. For greater capacity the International Horizontal Pressure Filters are used. The horizontal type are built in two diameters—7 and 8 feet—and range in length from 8 to 25 feet.

International Filters of Other Types:

International Filters of the gravity or open type are described in other bulletins. This type has the filter bed in open wood or concrete units and has important advantages for certain conditions of operation, but of course, is not constructed to operate under pressure as the type shown herein.

Sedimentation:

While comparitively few waters require sedimentation in connection with International Pressure Filters, it can be used advantageously with very turbid waters. The purposes of preliminary sedimentation are to allow suspended and coagulated matter to settle, to provide time for coagulating chemicals to react properly and to relieve filters of a large amount of work (at least 80 percent), thereby reducing the washing of filters to a minimum.

The time required for settling out suspended matter varies, depending on the size and weight of the particles, amount of coagulant used, etc. Where sedimentation is recommended preliminary to passing the water through International Filters, a period of two to six hours holding time is generally allowed. This period determines the size of settling basin required.

Coagulation:

Coagulation and filtration are very intimately related in the art of water purificaion. The use of a coagulant in connection with the pressure filter is essential if it is desired to remove all suspended matter visible to the naked eye. The spaces between the sand grains of the filter bed are sufficiently large to allow the finer particles to pass through the filter. In order to retain all the suspended matter on top the filter bed it is necessary that the impurities be brought together into comparatively large particles. This is accomplished by introducing a coagulant, alum, by means of the coagulant feeder. The small amount of alum fed into the water is entirely and immediately decomposed by the alkalinity naturally present in the water or which may be added. The chemical reaction which takes place produces hydrate of alumina, a heavy, sticky, gelatinous precipitate. At the same time, the electrolytic force set free induces the finer particles to gather together in flocs, each of which becomes enveloped in the sticky hydrate of alumina.

INTERNATIONAL

International Pressure Coagulant Feeder with Venturi Proportioner

International Pressure Coagulant Feeder:

An automatic pressure coagulant feeder is furnished with each International Pressure Filter Plant. The feeder is attached to the filter inlet, a special proportioner being placed in the water line. This proportioner automatically by-passes a small percentage of the incoming water through the feeder. In this way the coagulant is dissolved, automatically fed and mixed with the water entering the filter.

The International Pressure Coagulant Feeders are of the quick opening design for convenience in recharging. The feeder is built of cast iron, fitted with brass piping and bronze shut off and needle regulating valves. The operator increases or decreases the amount of coagulant fed by adjusting the regulating valve on the feeder. Only Lump Alum (not Aluminum Sulphate) should be used.

Artificial Alkalinity:

When the filter is to be used in connection with circulation and refiltration of water for swimming pools, etc., an extra feeder should be used. Refiltration of the water finally exhausts the natural alkalinity of the water and unless artificial alkalinity, such as soda, is supplied, the coagulant floc is not formed and free alum will pass through the filter. For such work and for waters low in natural alkalinity, the use of two feeders, one for alum and one for soda, is to be recommended.

Double Feeder with Proportioner Valve to supply artificial alkalinity as well as coagulant.

International Gravity Coagulant Feeder:

Where the coagulant is fed into the pump suction or into the mixing chamber of the coagulating and settling basin it is desirable and often preferable to use the International Gravity Coagulant Feeding Plant. Two solution tanks are provided so that one batch can be made up while the other tank is in service. Aluminum sulphate is placed in the perforated dissolving box and dissolved by the water from the spray dissolver. The coagulant solution of definite strength is fed to the constant level orifice box and from there piped to either a pump suction box or directly to the point of application.

The coagulant control may be either of the constant rate type—with the International micrometer adjustable orifice feed—or of the variable rate type where proportioning equipment is furnished so that the amount of coagulant fed will be in exact proportion to the varying flow of water.

International Gravity Coagulant Feeder, constant rate — manually controlled type.

Battery of International Vertical Pressure Filters

International Filter Shell:

International Pressure Filters are substantially constructed of the best materials available. The standard design is suitable for all ordinary pressures up to 67 pounds per sq. in. Filters for higher pressures are furnished, an extra charge being made for the heavier materials used. The shells are built of steel, the seams firmly hot riveted and well caulked. All heads are flanged and given standard maximum dish. Every shell is tested under a hydrostatic internal pressure fifty per cent greater than the maximum working pressure for which it is designed. Manholes and handholes for easy access to the interior are provided as needed.

International Distributing Manifold System:

The only practical distributing manifold for use with pressure filters is the pipe manifold, consisting of a header pipe with distributing lateral pipes. The size of the pressure filter units and the steel tank construction does not readily permit the use of systems such as the Wagner precast concrete block bottom.

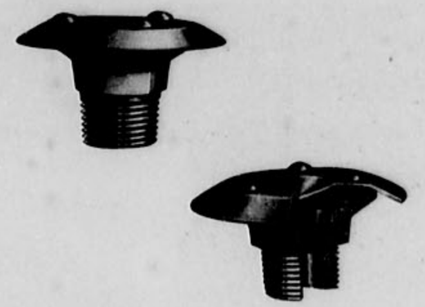

False bottoms of steel plate—unless ridiculously reinforced—will pulsate or "breathe" so that it is impossible to keep orifice nozzles or "strainers" from working loose and blowing out during washing. If the plate is perforated in place of using strainers, the upward jet action during washing will displace the gravel layers.

To provide perfect collection of filtered water and uniform distribution of wash water from *all points directly under* the surface of the filter bed the International manifold is of the pipe manifold type. The header pipe is oversize and the lateral pipes, spaced not less than 6 inches center to center, are of a size larger than the total area of the perforations or orifice nozzles in each lateral. To meet certain conditions, the manifold system may be of the perforated lateral type, where perforations, spaced 3 inches center to center, are made in the underside of the lateral piping and the latter set close to the concrete floor of the filter. Jet action is overcome by the water striking the concrete floor and diffusing before changing direction and passing upward through the gravel layers.

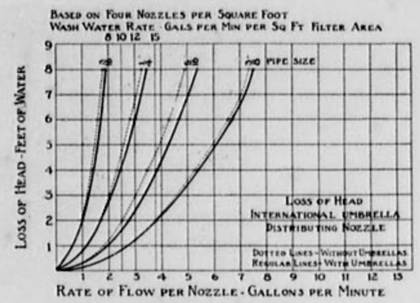

The standard manifold system on International general purpose pressure filters is of the pipe manifold type with International Umbrella Type Tobin Bronze Distributing nozzles. Header and lateral pipes are oversize and the laterals are spaced six inches center to center. The orifice nozzles—spaced not less than 6 inches center to center in both directions—are screwed into the top side of the laterals. The concrete sub-fill of the filter is brought up to imbed the lateral system and provide a smooth floor under the gravel.

Filter Bed:

The required filter sand and gravel is furnished with International Filters, shipped separately ready to put in place when the filter is installed. The gravel is specially selected, washed clean, and of the proper size and number of gradings. The filter medium is carefully washed silica filter sand of effective size and uniformity in accordance with the standards of modern filter practice.

The International Tobin Bronze Umbrella Distributing Nozzle. The amount of wash water distributed by each nozzle is governed by the diameter of the orifice in the body. The cone-umbrella cap assures perfect distribution.

With the International Umbrella Distributing Nozzle there is LESS *loss of head or frictional resistance to the passage of wash water with the cone-umbrella cap in place than with cap removed. Perfect distribution with minimum loss of head.*

International Tobin Bronze Distributing Nozzle:

The International Umbrella Distributing Nozzle was developed to provide a "strainer" that would accomplish every required purpose—to stand abuse and wear under all operating conditions—and to eliminate the common faults of ordinary "strainers."

It is made in but two pieces—the body and the cap—both parts of genuine Tobin bronze. The body is a drop forging, the spacers and rivets being an integral part of the body—and of real riveting metal. The cap is of one piece, scientifically shaped with a central deflecting cone and umbrella edge—both perfectly formed for efficient distribution. The rivet heads are spun (not hammered) to assure a perfect joint between cap and body. The throat is accurately bored to proper diameter with chamfered edge to insure easy influx. The shank is accurately threaded ⅜ inch pipe thread by automatic dies. The hexagon shaped part of the body permits the use of a standard wrench for installation.

The term "strainer" to describe this part of the underdrain system is now a misnomer. Before it was learned that proper gravel and correct gravel grading should be depended on to keep the sand layer in its proper place—many forms of actual sand strainers were used—and many are still being offered today. With correct gravel grading and the distributing manifold system of efficient design and construction, there will be no possibility of upsetting the gravel or allowing sand to get to the bottom of the filter. The purpose of the "strainer" of today is not to stop the passage of sand—but is that of an efficient distributor of wash water under the entire bottom of the gravel bed.

A few of the principal advantages of the International No. 3 Umbrella Type Nozzle are:

It has but one interior orifice which will not clog or become incrusted—strainers with multiple orifices or slots invariably clog within a comparatively short time.

It provides perfect diffusion by the cone-umbrella cap, diverting the water downward in all directions with rapid "get-away" yet extremely low friction loss and assuring complete diffusion throughout the entire underside of the gravel layers. Multiple orifice strainers produce a jet action, either upward or partly upward into the gravel bed—but in any case as a jet or number of jets—which puts the responsibility of diffusion on a smaller part of the gravel bed and uniform distribution is rarely accomplished.

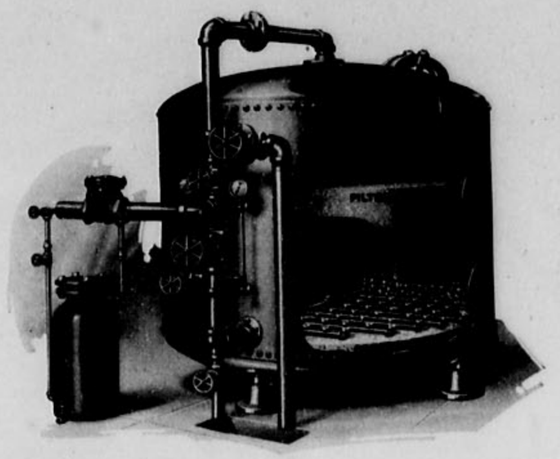

Being constructed entirely of Tobin bronze it is far superior in its resistance to corrosion than strainers of brass or so called "acid bronze."

The base—with its rivets—being a forging, it is more homogeneous and smoother than the invariable cast base of ordinary strainers—and the rivets are much more uniform and ductile. The rivets, being an integral part of the forging, will never work loose.

Sectional View of International Pressure Filter showing distributing manifold system, gravel layers and sand bed.

Operation:

Water enters the International Filter through the top and is distributed uniformly over the filter bed by a baffle, which prevents the incoming water directly striking the sand bed and disturbing the surface film. The water passes downward through the filter sand and gravel, the clean filtered water uniformly collected from beneath the gravel by the manifold system, through which it passes to the filter outlet.

To remove the collected sediment or suspended matter, the filter is periodically cleaned by reversing the flow of water. Wash water enters at the bottom, is first distributed by the manifold system, further distributed by the umbrella nozzles and completely distributed by the gravel layers. As the water rises the filter bed expands and is loosened, the sediment lifting and passing out to waste with the wash water.

International Filter Control:

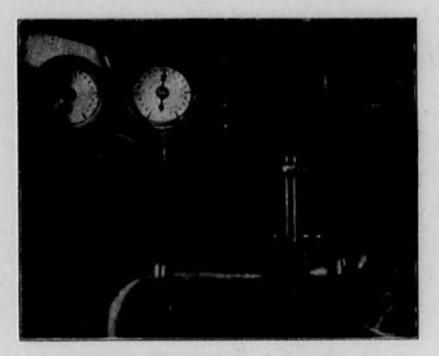

All immediate pipes, valves and fittings necessary for successful operation are furnished with each filter. Standard gate valves are used to assure perfect reliability and uniform efficiency—as single control multi-port plug valves, although cheaper, will leak sooner or later and permit unfiltered water to by pass the filter. Valves four inches and smaller are of the screwed pattern, flanged valves being used on larger sizes.

International Filter Battery:

Where it is desirable to provide for continuous service, the advantage of filtered water storage is obvious. But if storage to tide over the brief washing periods cannot be provided conveniently, a battery of two or more International Filters should be used. Only one filter of a battery is washed at a time and a complete shut-off of the filtered water supply is thereby prevented.

Another advantage of having filtered water storage is that the filter may be washed with filtered water, and this is always desirable and sometimes necessary. The "battery of three or more" International Filters provides for washing with filtered water even without storage. Any one filter of a battery of three or more filters, can be washed with filtered water from the others, by slightly increasing their normal rate of filtration during such washing period.

INTERNATIONAL

International Venturi Rate of Flow Indicator Installation on Horizontal Pressure Filter. Pressure Gauges indicate loss of head.

Loss of Head Gauges:

The International Filter is fitted with two gauges to show the pressure of the incoming and outgoing water. After the filter has been in service for a time, the accumulated sediment on top the filter bed resists the passage of water and this resistance or "loss of head" is shown by the gauges. "Clogging" is indicated by the difference in pressure shown by the two gauges, and when this difference in pressure between inlet and outlet reaches about five pounds, it is advisable to wash the filter.

Rate of Flow Indicator:

Where the quality of the filtered water does does not have to meet rigid requirements but some check is desired on the rate of flow of each filter—the International Venturi Rate of Flow Indicator or Manometer is used. The venturi tube may be placed in either inlet or outlet line of each filter. Connections are made from the venturi to the mercury manometer and the differential head is indicated by the mercury level. A scale gives readings in gallons per minute or any other desired factor. Recording gauges are sometimes furnished in place of the manometer, when permanent records are required.

Special venturi tubes and manometers can be furnished so as to allow placing the Indicator in a combined outlet and wash water line. Such an arrangement permits a check of both the filter rate of flow as well as that of the wash water. Both the standard and combined Indicators are covered in a separate bulletin.

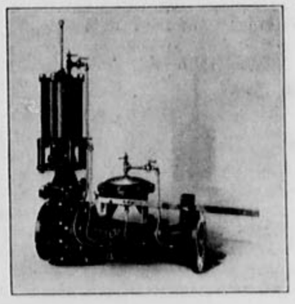

Rate of Flow Controller:

Although not furnished as standard equipment, pressure filters of all types and makes should be provided with automatic rate of flow controllers, especially if partial bacterial purification is expected or the water is to be used for domestic supply—and for the better general operation of the filter plant. There is hardly a gravity filter installation that is made without rate of flow controllers and undue overloading of a pressure filter is so much more possible that here is even greater reason for automatic control.

Depending upon the piping arrangement, the rate of flow controller is placed in either the inlet or outlet line of *each* filter. The International Rate of Flow Controller is of the Venturi type, the differential head automatically controlling the movement of the throttling device so that the filter cannot deliver a greater amount of water than that determined by the setting on the controller. With all the filters equipped with controllers each will handle its proper share of the load, whereas a clean filter of a battery of filters will always deliver water at two or three times its proper rating until the other filters have been cleaned.

Many modern filter plants are providing International Wash Water Controllers to assure the proper amount of water during backwashing.

These controllers may be provided with International Rate of Flow Gauges, either indicating or recording. Both the controllers and gauges are the subject of a separate bulletin.

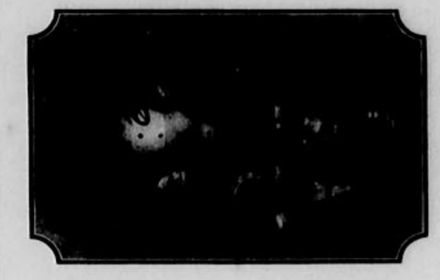

International Type P Rate of Flow Controller, Venturi Operated.

INTERNATIONAL

International Pressure Filters are providing clean clear water wherever water is being used. The larger units, completely equipped are providing many *municipalities* with water meeting all sanitary and esthetic requirements. *Industrial plants*, especially those in the *paper* and *textile* trades filter their entire supply and assure themselves of a perfect product. *Public Institutions, hospitals*, etc., find that filtration of the general supply results in many savings and much satisfaction. *Office buildings, hotels*, and

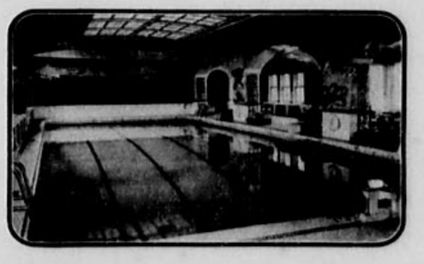

apartment buildings require the best quality of filtered water to meet the modern demands of their tenants. And the better *residences* should have clear sparkling water available at all times for all purposes. Crystal clear water which will not discolor or spot the clothes is an essential to the *laundry*. *Bakeries, dairies* and all *food product plants* find that International Pressure Filters are not only a necessity but a profitable asset as well as a decided advertisement.

International Pressure Filters are supplying the most inviting sparkling clear water for *swimming pools* of the finest type. Whether the pool is a simple plunge or an extensive outdoor installation there is an International Filter Plant of proper size to meet every requirement.

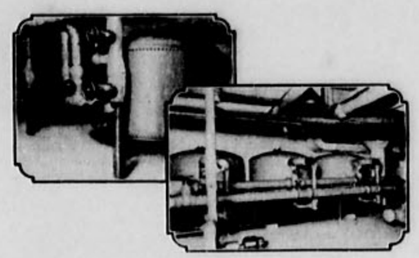

The continuous circulation and refiltration method is to be recommended. A circulating pump draws water from the deep end of the pool, passes it through the International Filter and then after heating and sterilizing returns it to the shallow end of the pool.

Although dependent upon the use of the pool, —the rate of circulation (and size of filter) should be sufficient to refilter the full volume of the pool once in ten or twelve hours. With such circulation and refiltration and the usual sterilization—the water in the pool can be made to comply with the most stringent sanitary requirements and at the same time crystal clear for weeks and months—adding only such fresh water needed to make up losses from splashing, cleaning the pool and washing the filter.

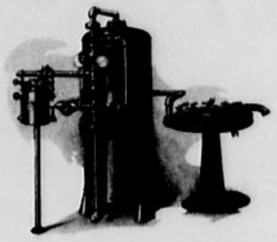

Several bulletins are available covering the special application of International Pressure Filter for swimming pools, care and operation of pools, etc.

INTERNATIONAL

Where filtration of the entire supply is not possible or not necessary, International Pressure Filters are usually installed to provide crystal clear water for the drinking water system. *Restaurants, tea rooms, hotels*, and *office buildings* endeavor to make their drinking water most inviting and the combination of International Pressure Filter and International Disk Filter has become standard practice. The latter uses as a filter medium, disks of compressed cotton fibre which are inexpensive and discarded when clogged and replaced with fresh ones. The Disk

Filter is designed primarily for putting the "finishing touch" of filtration on water that is already comparatively clean. From the esthetic standpoint it has been found advantageous to refilter even apparently clean water and remove every trace of suspended matter.

When the water is to be used for fine manufacturing purposes—such as by *photographers, bottlers, chemical* and *cosmetic laboratories, ice plants*, etc.—even traces of foreign matter affect the finished product, lowering the quality and making the combination of International Pressure and Disk Filter an economic advantage.

Standard Specifications:

Furnish complete (one, two, battery of three, etc.) International Filter Co's. Style (D, E, R or H) Pressure Filter(s), . . . feet in diameter by . . feet (high or long), (each) with . . inch inlet and outlet connections and . . inch waste connection. (Each) filter to have a capacity of . . . . gallons per hour (and a combined capacity of . . . . gallons per hour) based on the rate of filtration of (2, 3 or 4) gallons per minute per square foot of filter area.

Filter shell(s) to be of best grade tank steel, the seams firmly hot riveted and well caulked. Heads flanged and given standard maximum dish. (Each) shell to be tested and make tight under a hydrostatic pressure 50% in excess of working pressure of . . . . pounds per square inch and provided with necessary flanges, manhole and manhead.

Filter(s) to be provided with distributing manifold with laterals spaced 6 inches center to center and International Tobin Bronze Umbrella Distributing Nozzles spaced not less than 6 inches center to center in both directions: full charge of filtering material of not less than three grades of selected silicious filter gravel and one of special washed and graded silica filter sand.

Filter(s) to be provided with all immediate pipes, valves and fittings necessary for operation: loss of head gauges for inlet and outlet lines: sight glass for waste line and sample cocks.

An automatic pressure coagulant feeder to be provided, ready for connection in inlet line—complete with proportioner, needle regulating valve and all brass pipes, valves and fittings necessary for its operation.

(Note:—When filters are to be used in connection with the circulation and refiltration of water for swimming pools—an extra coagulant feeder must be specified. Refiltration of the water finally exhausts the natural alkalinity of the water and unless artificial alkalinity is supplied, the coagulant floc is not formed and free alum passes through the filter. For such work substitute the following for the last paragraph in the above specifications.)

Two (2) automatic pressure coagulant feeders to be provided ready for connection in inlet header line—one for lump alum and one for sal-soda—complete with proportioning device, needle regulating valves and all brass pipes, valves and fittings necessary for their operation.

INTERNATIONAL

Style D- International Filter

THE Style "D" International Filter is used where only a relatively small volume of filtered water is required. It is especially suitable for filtering the entire water supply of residences, small apartment buildings and for drinking water supplies or special process water in industrial plants. A single filter or battery of two or more filters can be used to secure the desired capacity.

The Style "D" International Filter is built of steel—tested under a hydrostatic internal pressure of 150 pounds per square inch and is suitable for any working pressure up to 100 pounds. The external piping and fittings are furnished and separate brass control valves are used.

An International Coagulant Feeder is furnished with each filter or battery of filters and is connected in the manner illustrated below. A sight-glass is supplied for the wash water outlet to show the condition of the wash water and re-wash water so that the operator can see when the filter is clean.

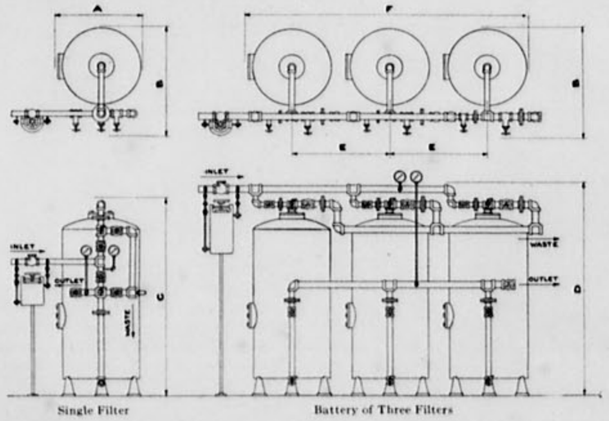

The Style "D" International Filter is built up to the same standard as the larger International Filters.

Three or more Style "D" International Filters are placed in a battery where it is desired to wash the filters with filtered water. The connections are arranged so that any one of the filters may be washed with filtered water from the other two, thus requiring the operation of but two valves on each filter. When one filter is to be washed the inlet valve is closed and the waste valve opened. The filtered water from the other two or more units, being under pressure, is forced up through the discharge of the one that is to be washed and carries the accumulated sediment out to the sewer. The discharge valves are used only when one unit is to be cut out of service.

Where conditions warrant, it is better to install a battery of three or more filters, than to install a single filter of the required capacity because the filters can be washed with filtered water and not so large a volume of wash water will be required.

INTERNATIONAL

Style E- International Filter

THE Style "E" International Filter is generally used in hotels, apartment buildings and institutions. It is also used in connection with swimming pools and for filtering the entire water supply of industrial plants. A single filter or a battery of two or more filters can be used to secure the desired capacity.

The Style "E" International Filter is built of steel—tested under hydrostatic internal pressure of 100 pounds per square inch and suitable for any working pressure up to 67 pounds. Style "E" Filters for higher working pressures can be furnished at a slight additional cost. All immediate pipes, valves and fittings necessary for the operation are furnished.

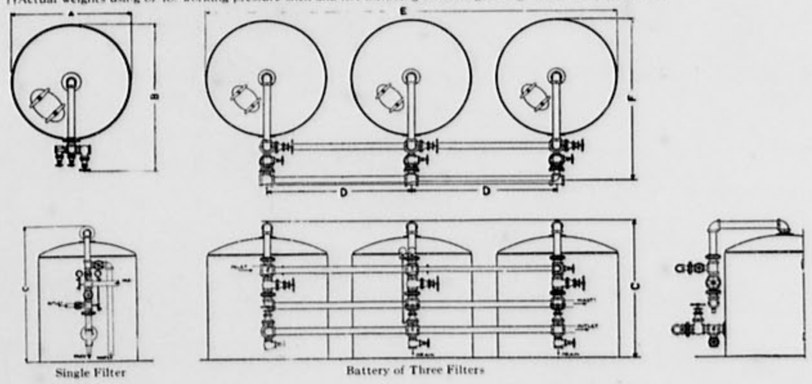

An International Coagulant Feeder is furnished with each filter or battery of filters. A sight-glass is supplied for the wash water outlet to show the condition of the wash water and re-wash water so that the operator can see when the filter is clean.

The Style "E" International Filter in three or more units is recommended where it is desired to wash the filters with filtered water, or where sufficient wash water would not be available to wash a single filter of the required capacity.

With a battery of three or more filters only two valves are required in the operation of each filter. When a filter is to be washed the inlet valve is closed and the waste valve opened. The filtered water from the other units, being under pressure, is forced up through the discharge of the one that is to be washed and carries the accumulated sediment out to the sewer. The discharge valves are used only when any one unit is to be cut out of service.

INTERNATIONAL

Style R- International Filter

THE Style "R" International Filter is generally used in large hotels, office buildings and institutions. It is also used for filtering the entire water supply of industrial plants and small municipalities. A single filter or a battery of two or more filters can be used to secure the desired capacity.

The Style "R" International Filter is built of steel—suitable for any working pressure up to 67 pounds per inch and tested under a hydrostatic pressure of 100 pounds per square inch. Style "R" Filters for higher working pressures can be furnished at a slight additional cost. All immediate pipes, valves and fittings necessary for operation are furnished.

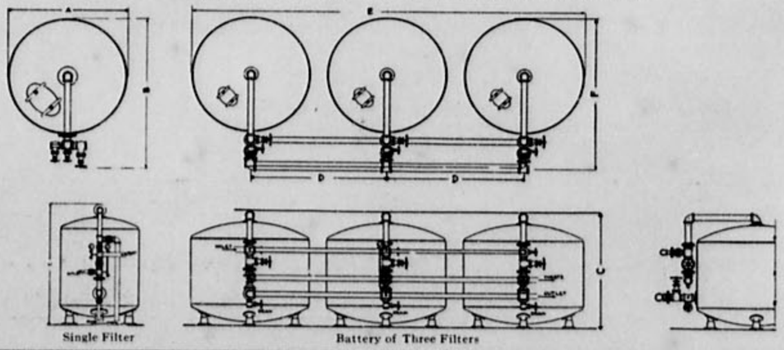

An International Coagulant Feeder is furnished with each filter or battery of filters. A sight-glass is supplied for the wash outlet to show the condition of the wash water and re-wash water so that the operator can see when the filter is clean.

The Style "R" International Filter in a battery of three or more units is installed where it is desired to wash the filters with filtered water. The connections are arranged so that any one of the filters may be washed with filtered water from the other two or more filters. (See drawing below.)

With the larger filters the quantity of water available for washing the filters often determines the number of units required. At least twelve gallons per minute per square foot of filter area must be available during washing while but three gallons per minute per square foot is required during filtering. If the larger quantity of wash water, (four times the filtering rate) is not available to wash a single filter of the required capacity, a battery of two or more filters must be installed.

Single Filter — Battery of Three Filters

INTERNATIONAL

Style-H International Filter

THE Style "H" International Filter is generally used to filter the water supply of railroads, industrial plants and municipalities. A single filter or battery of two or more filters can be used to obtain the amount of filtered water required.

The Style "H" International Filter is built of steel—suitable for any working pressure up to 67 pounds and is tested under a hydrostatic pressure of 100 pounds per square inch before shipment. Style "H" Filters for higher working pressures can be furnished at a slight additional cost. Flanged gate valves and cast iron fittings are used. The controlling valves may be arranged for operation from the floor above by hand or hydraulically if required. Rate of flow controllers and indicators will be furnished if desired.

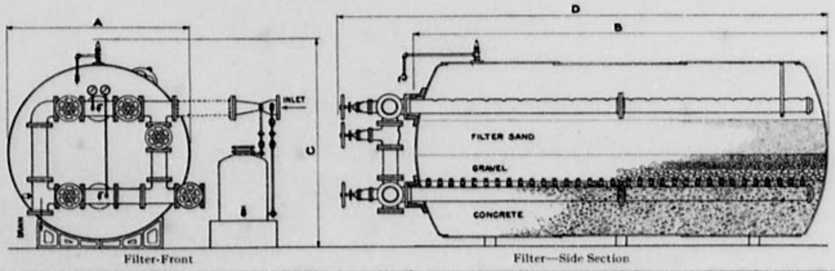

An International Coagulant Feeder is furnished with each filter or battery of filters. A sight-glass or an open connection is supplied for the wash water outlet, to show the condition of the wash water and re-wash water so that the operator can see when the filter is clean.

The Style "H" International Filter in a battery of three or more units is installed where it is desired to wash the filters with filtered water. The connections are arranged so that any one of the filters may be washed with filtered water from the other two or more filters.

With the larger filters the quantity of water available for washing the filters often determines the number of units required. Twelve gallons per minute per square foot of filter area should be available during washing while but three gallons per minute per square foot is required during filtering. If the larger quantity of wash water, (four times the filtering rate) is not available to wash a single filter of the required capacity, a battery of two or more filters must be installed.

INTERNATIONAL

WATER SOFTENING AND FILTRATION PLANTS

FOR ALL INDUSTRIAL AND MUNICIPAL SUPPLIES

Filtration

International Sand Filters are built in sizes and types to meet any requirements—large or small—for domestic, industrial and municipal purposes. In design and construction all the best known principles of filtration are included. The filters may be used singly, in pairs or in batteries of three or more. Separate bulletins describe different sizes and types.

Water Softening

International Softeners have never followed old methods; they have had to be different to make possible the uniform results that have made their success. International Softeners are made in sizes and types to handle several million gallons of water a day or a few hundred gallons an hour. They are made to soften water cold, or warm or hot. The same accuracy of operation is built into all sizes and types.

Water Purification

Whether your problem is one of filtration, softening, color removal, iron removal, coagulation, sterilization, etc., there is a type of International Equipment designed for your requirements. A laboratory and an engineering department are maintained to investigate your problems and work out the arrangement and design of apparatus that will eliminate your difficulties. You are invited to make use of this service.

Remember that water is a raw material in practically every industry. Our aim is to assist you in whatever process is necessary to make the water a finished product.

Steam Purification

The International Steam Purifier, employing new methods, removes all moisture and dirt from steam—eliminates clogging of steam lines, governors, safety devices, etc.—assures 100 per cent clean, dry steam.

THE GENERAL SUPPLY CO. OF CANADA, LIMITED

To Department of Indian Affairs

On the analysis of your water as submitted by Mr. J. Grant Lewis under date of June 28th, was a recommendation that this water be softened. On investigation we find this water contains 43 grains of hardness per Imperial gal. and it would require a 36" diameter Softener with an extra large softening bed to take care of the extremely high hardness.

This Softener would have a capacity per regeneration of 2100 Imperial gal. After softening this quantity of water, it would have to be regenerated requiring 80# of salt, this being based on 3/4# per 1000 grains, and 840 U.S. gals. of water for back wash.

If this softener were installed, we believe it would be advisable to enlarge your storage capacity of filtered water to take care of the requirements of back washing the softener and filter. It is possible to back wash this filter with raw water, but in view of the fact that this water is to be used for sanitary purposes, we do not recommend this.

The prices on the equipment are as follows:

1 only 60" Style "E" International Pressure Filter, 67# working pressure having a capacity of 2355 U.S. gal. per hour at a 2 gal. per sq. ft. per mi. rate $574.00

Alternative

2 only 42" (in battery) Style "E" International Pressure Filters built for 67# working pressure and having a capacity of 2310 U.S. gal. per hour at a 2 gal. per sq. ft. per mi. rate $721.00

1 only International U.F.R. 36" diameter Crystallite Water Softener having a capacity of 2100 Imperial gals. of water per regeneration as per analysis submitted by your chemist and requiring 80# of salt per regeneration, price complete with brine tank $1242.00

The above prices are f.o.b. Punnichy, Sask., duty and excise paid, no further charge for tax.

Trusting we shall be favored with your valued order.

Yours very truly,

The General Supply Co., of Canada, Limited.

SCHOOLS BRANCH
AUG 18 1927

Department of Indian Affairs,

Ottawa, Ont.

Attention Mr. J. D. McLean,
Asst. Deputy and Secretary

Gentlemen: Your file No. 121-1-5

Under date of May 10th you wrote us regarding the Gordon's Indian Residential School at Punnichy, Sask.

After going into the matter very carefully with your Mr. Orr and also Mr. Ferrier, we wish to submit the following proposition.

We understand that your pump has now a capacity of 33 Imperial gal. per minute and in order to keep the filter rate per sq. ft. of filter area within the 2 gal. per sq. ft. per minute rate, it will require a 60" diameter Filter having an area of 19.63 and requiring 236 gal. per mi. for 6 minutes for back washing, or a total of 1415 gals.

The Filter will have to be back washed possibly once a week depending entirely on the condition of the water you are going to filter.

If you find that you are not going to have sufficient reserve capacity to take care of these requirements, it might be better to instal two 42" Filters which would give you almost the same area, that is 19.24 sq. ft. and you would then be able to back wash one Filter at a time at the rate of 115 gal. per mi. This is a matter which your engineers will have to decide, basing their decision on floor space available and reserve capacity of wash water.

Indian Affairs. (RG 10, Volume 6310, file 654-5, part 4)

August 19, 1927.

Sir,-

With reference to your letter of the 15th instant regarding a filter for the Gordon's Indian Residential School at Punnichy, Sask., I would ask you to ship, addressed to the Indian Agent, Mr. S. S. Moore, Punnich, Sask.,

1 only 60" Style "E" International Pressure Filter, 67# working pressure having a capacity of 2355 U.S. gal. per hour at a 2 gal. per sq. ft. per. mi. rate .....$574.00.

at the price quoted of $574.00. The accounts for same should also be sent to the Indian Agent at Punnichy in order that he may certify for them when they will be forwarded to the Department for payment.

Your obedient servant,

A.F.MacKenzie.
Acting Asst. Deputy and Secretary.

R.E. Hayes, Esq.,

August 19, 1927.

Sir,-

I beg to advise you that an order has today been placed with the General Supply Company of Canada for,-

1 only 60" Style "E" International Pressure Filter, 67# working pressure having a capacity of 2355 U.S. gal per hour at a 2 gal. per sq. ft. per mi. rate $574.00

for the Gordon's Indian Residential School and they have been instructed to ship same addressed to the Indian Agent at Punnichy. I would ask you to get into communication with the Agent and make arrangements to have the filter properly installed on its arrival. In the operating of this filter there will be required once a week approximately 6 minutes of back washing whichwill use in the neighbourhood of 1500 gals. of water. When the plumber is sent to make the installation, arrangements should also be made for discharging outside of the building this water used for back washing, same should not be emtied into the school drains as it would necessarily flood the septic tank.

Your obedient servant,

A.F.MacKenzie.
Acting Assistant Deputy and Secretary.

SCHOOLS BRANCH
OCT 18 1927

Sir:-

Some time ago I received a complaint from the Reverend Principal at the Gordon's Indian Residential School that the 10 H.P. engine in use there was worn out and not properly functioning. I requested the Canadian Fairbanks-Morse Co. to send one of their experts to look over and report upon the engine as it was bought from them, and I have just received this.

Information from the company indicates that the cylinder is very badly scored and that to renew this and provide a new piston, a new cylinder head, complete with valves, etc., and completely overhaul the engine, would cost approximately $500.00. While this seems to me a large amount, the engine should be overhauled before the cold weather sets in. It has only been in use for the past six years and the expert can offer no reason as to why it should now require so much repairing. I am assured, however, that for the expenditure named, it can be placed in first class condition.

The Principal requested that it should be replaced by a 15 H.P. engine, but I am of the opinion that the lesser expenditure involved in repairing the old one would be more economical and should prolong its life for another four or five years. I shall be glad if the Department will advise me whether the work may be proceeded with.

Your obedient servant,

Wm Graham

IN YOUR REPLY REFER TO
No. 312-[illegible]
ALSO TO DATE OF THIS LETTER

COMMISSIONER'S OFFICE,
REGINA, SASK., October 14th, 1927

Sir -

I beg to refer you to your 121-1-5, dated the 19th. August last, advising me that you had placed an order with the General Supply Company of Canada for the delivery of an International Pressure Filter for use at the Gordon School in the Touchwood Agency. I so advised the Indian Agent, and gave him instructions in conformity with those contained in your letter referred to. Not having heard from him I again wrote him and have received a reply today, stating that the installation cannot take place, as there are certain parts which have not yet been received. The Filter Shell is one which is apparently being supplied by the Keewanee Boiler Works, and while it is not yet on the ground it is expected daily. No word, however, has been received of other material which is being supplied by the International Filter Company, and every day's delay brings nearer the possibility of the ground being frozen before the installation can be made.

I should be glad if you would communicate with the shippers and ask for an explanation as to the cause of the delay, and request them to do all in their power to expedite delivery of the various parts that are needed.

Your obedient servant,

W. M. Graham,
Indian Commissioner.

Sir,-

When advising me under cover of Department number 121-1-5 dated the 19th of August last of the purchase of Filter from the General Supply Company of Canada for the Gordon's Indian Residential School the price was stated, but not whether the figure was F.O.B. Punnichy or F.O.B., the point from which the Filter was shipped. I enclose Touchwood Agency voucher number 256 in favor of the General Supply Company of Canada for $574.00, but when forwarding this the Indian Agent points out that although the account bears the notation that the charge is F.O.B. Punnichy he has paid freight charges amounting to over $180.00. Will you please advise me who is responsible for the payment of these charges.

312-11 A C.E.

Dear Sir,-

I beg to acknowledge receipt of your letter of the 9th instant inclosing account amounting to $574.00 in favour of The General Supply Company of Canada, Ottawa, for a Filter supplied for use at Gordon's Indian Residential School.

In reply I have to inform you that the price quoted by the above mentioned Company was f.o.b. Punnichy, and, therefore, the freight charges, amounting to approximately $180.00, which the Indian Agent paid, should be deducted from the account. It is re-inclosed herewith.

Yours truly,

F.H.Paget

Sir,-

With reference to Department number 121-1-5 dated the 19th of August last I beg to advise you that when the filter for the Gordon's Indian Residential School arrived it was found that there was no space in which to install it, and after discussing the matter with Mr. William Swan, Architect in Punnichy, it was decided that the best arrangement that could be arrived at would be to erect a lean-to to the school and transfer the engine there and utilize the space vacated by the latter for the installation of the filter. These arrangements are being carried out under the supervision of Mr. Swan.

Your obedient servant,

W.M. Graham,
INDIAN COMMISSIONER.

IN YOUR REPLY REFER TO
No. 312-11A C.R. ED
ALSO TO DATE OF THIS LETTER

COMMISSIONER'S OFFICE,
Regina, Sask., December 10th, 1927.

SCHOOLS BRANCH DEC 15 1927

Sir:-

I have just received a letter from the Reverend Principal of the Gordon's Indian Residential School, advising me that the bottom fell out of one of the furnaces during the cold weather and he was forced to wire for new grates. He states that he hopes his action will be approved and submits for the consideration of the Department payment of the account, amounting to $99.70. I enclose a voucher for that amount, in favour of the Gurney Foundry Co. Ltd., of Winnipeg.

I think, however, that the Principal could have telephoned and had the order placed through this office. He no doubt considered the matter urgent, but, at the same time, we should have information which will enable us to control school expenditures when the Department is expected to bear the expense.

Recommended for payment

Your obedient servant,

W. M. Graham,
Indian Commissioner.

The Secretary,
Dept. of Indian Affairs,
Ottawa, Ont.

My opinion is that the Principal could have showed in his for authority before making the purchase that he did

Re.Filtration Plant and Engine Room,Gordons School.

I am enclosing herewith three copies of B.Dunster's account for the work on above at Gordons School.
This work has run into more time than was at first anticipated,but with so much changing of machinery which had to be kept running,it could not be avoided.
Before the filtration plant could be installed the engine had to be changed from it's original foundation onto a new one built in the new engine room.Before this was done the generator had to be moved,as it was in the spot required for the engine.The generator could not be placed on it's new foundation until such time as the engine was also moved as the light had to be kept on for the school.This was arranged by temporally installing the generator and then when all was ready making the change in one day;running a temporary line to the switch board from the generator.
As soon as engine and generator were on their new foundations it was necessary to arrange for the running of the laundry machinery.This we had expected to do by a twisted belt from the drive wheel to a pulley on overhead shaft,but this after several trials was found to be impracticable and we had to rearrange the laundry machinery,which now runs much better with a direct driven shaft.
When we had the laundry machinery running,the old engine bed,a large concrete block,had to be brokem up with cold chisel and hammer so that the filter tank could be installed;this tank in the meantime was in the new engine room.
With the engine bed demolished and the concrete in shape to receive the tank it was moved onto it's proper position and the fitting and installing commenced.This involved running the water main under the concrete floor to the filter tank and then to the pressure tanks;also the running of a waste from filter tank to sewer to septic tank.When the actual connecting up of the filter was done the two large pressure tanks had to be emptied and the work done so that the water supply to the school was not interfered with.This was managed by working during the night hours.
Afterwe had the filter functioning O.K.the switchboard and batteries had to be moved into the new engine room which naturally involved a lot of work on the wiring from generator to switchboard.

Indian Affairs. (RG 10, Volume 6310, file 654-5, part 4)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

Library and Archives Canada / Bibliothèque et Archives Canada
www.collectionscanada.gc.ca

With the present layout the school has an engine room that is safe to move around in and a compact filtration plant right alongside the main water supply tanks, and the laundry machinery is running with less loss of power.

The Fairbanks-Morse expert was up a few days ago and the engine now appears to in good condition.
The alum sulphate for the coagulent tank of the filter was obtained through the local druggist.

If there are any further details of the work done, which you require I shall be pleased to furnish you with same.

Yours faithfully,

William Swan

Dear Sir

I am taking the liberty of writing to tell you some of my troubles in the hope that you may see your way to help me and am marking the letter "personal."
Last year the Department were unable to sanction the building of a house for the Farm Instructor or to enlarge the barn. Might I ask you to grant this favour this year.
During the month of March last year Commissioner Graham engaged a Farm Instructor for me and promised him a house — perhaps I should say the man told me he promised it — which house of course was not built.
The man was married and came from Ontario.
In the month of June he asked me if his wife and baby might come on a visit. They came and stayed for some time but the arrangement was far from being satisfactory and I had to ask him to leave. Mr. Graham did not say anything to me but I dont think he was pleased at my action.

by reason for asking him to look for other work was because his wife made trouble among the members of the staff and a change became absolutely necessary.
I never told him the reason as I would not talk to a man about his wife but I think he quite understood the conditions.
I have an opportunity of securing a good married man now but would not think of doing so unless you sanction the building of a house. It is very desirable that we should not be continually changing our staff and a married man is more likely to settle down than a single man. Also this is no place for a woman who has no work to do as she is liable to make trouble.

Barn/

we have not sufficient room for our stock or feed. Our present are very over-crowded and it is very difficult to do our work properly.

The other matter I wished to put before you is the question of land.
As you know we have a half section on part of which stands the old school. There are only 60 acres broken on

Dear Canon Irwin:

I have your letter of the 14th instant, with reference to the desirability of providing a farmer's residence and enlarging the barn at the Gordon's Indian Residential School. I am pleased to inform you that there are items for these purposes in our Main Estimates for the coming fiscal year. Some time in April, Mr. Indian Commissioner Graham will receive authority to proceed with the building activity.

With reference to securing a parcel of land to the north of the school, I have directed that enquiries be made and you will be advised later in the matter.

Yours very truly,

Duncan C. Scott

SCHOOLS BRANCH
APR 2 1928

Sir:-

In his report on the Gordon's Indian Residential School, Inspector Hamilton suggests that the dryer should be put in working condition. It will require considerable pipe and a quantity of fittings and will cost about $50.00.

In my opinion, this should be attended to by the school. Other schools have done similar work at their own expense. May I please receive the Department's instructions.

Your obedient servant,

W. M. Graham,
Indian Commissioner.

Ottawa, April 2, 1928.

Sir:

I have your 312-11A C.E. of the 28th ultimo, relative to the suggestion of Mr. Inspector Hamilton that the dryer at the Gordon's Indian Residential School be put in working condition. In this connection it is noted that the quantity of pipe and fittings required for the purpose will cost approximately $50. The Department notes your opinion that the fitting up of this dryer and placing it in working condition should be attended to by the school at their own expense and you may so inform the school authorities.

Your obedient servant,

A. F. MacKenzie,
Acting Asst. Deputy & Secretary.

GORDON'S INDIAN RESIDENTIAL SCHOOL (Cont'd.)

The fire escapes are good, but both doors open in instead of out. These could be changed, but the fire escape platform would not allow them to open wide. Fire drill has not been practised often since the Rev. Canon Irwin took charge. I pointed out that more frequent practices should be carried out, and advised the Indian Agent to also have fire drill on his occasional visits.

The Rev. Canon Irwin informed me he had resigned and would be leaving in the near future. I believe the Rev. Principal had this work at heart, and he certainly gave his whole time and attention to it.

COMMISSIONER'S OFFICE,
REGINA, SASK., March 30th, 1928

Dear Mr. Scott:-

I beg to enclose herewith a report of an inspection of the various schools in the Touchwood Agency which was made by Mr. Inspector Hamilton.

I see nothing in this report that requires much attention, excepting the Inspector's remarks regarding the residence of the teacher on the Day Star reserve. This house is in bad condition, but as the people who are occupying it are of little or no account and they are about to leave I thought we could let this matter stand until such time as we get people in there who are capable of looking after things and then we could put the house in shape.

With reference to the appointment of a Farming Instructor at the Gordon Indian Residential School, I do not know whether the newly appointed Principal has any knowledge of farming or not. If he has not this school is going to be in a bad way. Canon Irwin had no practical knowledge of farming and surrounded himself with the poorest class of men possible, and if the new Principal is not an improvement I am afraid we cannot look forward to any great change for the better. As regards the dryer in the laundry, the mechanic should be able to fix this and should do it without assistance. As regards the matter of a chicken house, this can be attended to when we are fixing up the stable this summer. You will note that the doors

on the fire escapes open inward. Nearly all our plans that come from Ottawa show the doors opening inward; this should be changed. I would ask for authority to replace the fire hose at this school.

You will notice that the laundry at the Muscowequan School is in very poor shape. This school is, I understand, one that the Church expects the Department to make an addition to. In that case the question of the laundry and other repairs could be gone into.

GORDON'S INDIAN RESIDENTIAL SCHOOL.

The classroom work here is carried on in the senior room by Miss Atwater . She has been here for a number of years and is doing good work.

The junior room is in charge of Mr. Sinclair, and I believe his work is quite satisfactory.

In both classrooms the children appeared well along in their grades, and the work examined was good. The children were clean, and I found the classrooms well aired and tidy.

Mrs. Collins was in charge of the kitchen, where I found the work being carried out with good discipline. The food was well prepared, and I think, in all respects, Mrs. Collins gives good service.

The sewing teacher, Miss Wilkins, is quite capable, but unfortunately was leaving the following week. Both the boys' matron and laundry matron had recently left, but Rev. Canon Irwin informed me he had already engaged new officers.

GORDON'S INDIAN RESIDENTIAL SCHOOL (Cont'd.)

Mr. Dunster is now engineer. He is an experienced man, and I feel sure can carry out any repair work required.

Since the Farming Instructor, Mr. Headrick, left no one has received the appointment. A first class man is badly needed in this position. Canon Irwin informed me he had a man in view, but was unable to hire him as he has no accommodation at present for a married man.

I found the school in good repair and clean throughout. The filter is giving splendid satisfaction, although it does not soften the water.

The dryer in the laundry is of little use. I believe this could be made to do good work, but would require about $50.00 worth of pipe and material. The engineer informed me he could do the work if the material were supplied.

The chicken house has not been in use since its erection. Only one ply of boards were used in this building and these have dived apart so that it is unfit for winter use. This should be put in shape so that poultry may be kept.

I found the other building in good repair, and the work horses in much better condition than ever before. The cattle appeared to be receiving good care.

Very little sickness has occurred at this school during the winter, and the children looked exceptionally well. I believe they receive good care and plenty of wholesome food.

The fire

Sir,

I am informed that the drainage system at Gordon's school is out of commission and it is thought that some of the pipes have been broken by the frost and that it will be necessary to open the trench and replace some the pipes that are found to be damaged. I beg to request authority to have this defect attended to and assure you that the cost will be kept at the lowest possible figure.

The boilers in this institution should also be covered with asbestos and I shall be glad to receive authority to proceed with this work at the same time.

Sir,

In the Touchwood Agency Estimates for 1928-29 I inserted an item of $1000.00 to provide a soft water reservoir and $120.00 for fencing, both of which are urgently needed at Gordon's School. The soft water reservoir was authorized at one time but the amount allowed was entirely inadequate and nothing was done to provide for the storage of soft water. This really is an urgent necessity and I shall be very glad if some means can be found to provide it.

I am exercising the strictest economy, saving wherever possible on such items as have been allowed but this is a case where an ordinary, every day facility should have been provided long ago and I trust the Department will be able to rpovide for an expenditure of $1120.00 for the above mentioned items.

Your obedient servant,

O.K. - DCL

W.M. Graham
Indian Commissioner.

The Secretary,
Indian Department,

Ottawa, June 30, 1928.

Sir:

I have your 312-11A C.E. of the 22nd instant, relative to the providing of a soft water reservoir and fencing for the Gordon's Indian Residential School and giving an estimate of the cost.

In view of your report that the installing of this reservoir is an urgent necessity, I have to inform you that you may arrange to have this work carried out. It is noted that you estimate the cost to be approximately $1,000.

Further, you may incur an expenditure of $120 for fencing.

In connection with this expenditure, please be guided by the general instructions in the Deputy Superintendent General's 1-1-5 of the 28th ultimo.

Your obedient servant,

A. F. MacKenzie.
Acting Asst. Deputy & Secretary.

COMMISSIONER'S OFFICE,
W. REGINA, SASK., 30th June, 1928.

Sir:-

Recently the Reverend Principal of the Gordon's Indian Residential School wrote stating that the fire hose and extinguishers at the school are in bad condition. I requested the Indian Agent to let me have a report and he states that the hose appear to be leaking badly although not cut or cracked, and suggests using a dressing. This, I understand, should not be used with linen hose and it is possible that the hose is dry and that running water through will swell the weave and prevent the leakage. I am directing the Indian Agent to have this done and report again.

In regard to the extinguishers, he states that they need acid and two of them require new hose. These are matters which the Principal should have attended to and I am directing the Agent to tell the Principal to buy acid and new hose. He states that they need "two more small extinguishers of the long thin cylinder type at $3.00 each" for the engine room, and three additional 2½ gallon extinguishers for the upper storey. Will the Department please arrange to have these supplied.

Your obedient servant,

W. M. Graham,
Indian Commissioner.

SCHOOLS BRANCH
JUL 9 1928

Sir:-

There is some interior painting required at the Gordon's Indian Residential School and the Principal recently wrote asking to be supplied with material. His list was a long one and I asked the Agent to let me have a report as to requirements, and he informs me that the Principal's list comprised enough material to redecorate the whole interior of the school and he does not think this is immediately necessary. I do not think so either, but I think some repairing should be done, and, if the Department will allow $150.00, I will so advise the Principal and have the money expended to the best advantage.

Your obedient servant,

W. M. Graham,
Indian Commissioner.

Gentlemen:

Please ship, addressed to Rev. Canon J. K. Irwin, Gordon's Indian Residential School, Punnichy, Sask., the following:

2 - 5 Gal. Pump Tanks, complete with non-freeze charges,
2 - 1½ Quart Pyrene extinguishers, complete with non-freeze charges.

These should be supplied at the price usually charged this Department, and the cost should be F.O.B. Punnichy, Sask.

Please forward your account, in duplicate, to S. S. Moore, Esq., Indian Agent, Punnichy, Sask., who is being informed that the order has been placed with you, and requested, upon receipt of the extinguishers, to certify the account and send it to the Department, when payment will be made.

Yours very truly,

F. H. Paget,
Accountant & Purchasing Agent.

Ottawa, July 9th, 1928.

Sir:

Replying to your No. 312-11A C.E. of the 30th ultimo, I beg to say that you may incur an expenditure not exceeding the sum of $150 in supplying the materials required in the interior redecorating at the Gordon's Indian Residential School. You may advise the Principal accordingly and arrange to have this money expended to the best advantage.

I have also your letter of the same date and file number regarding the fire equipment. It is noted that the fire hose leaks, although not cut or cracked, and that you have directed the Agent to authorize the Principal to buy any new hose required, and also the necessary refills for the extinguishers on hand.

We are placing an order here to supply 2 - 5 gallon pump tank extinguishers and 2 - 1½ quart Pyrene extinguishers. The latter to be used in the engine room and the larger size for the upper storey of the school building.

Your obedient servant,

A. F. MacKenzie,
Acting Asst. Deputy and Secretary.

IN YOUR REPLY REFER TO
No. 312-11A C.E.
ALSO TO DATE OF THIS LETTER

ED

COMMISSIONER'S OFFICE,
REGINA, SASK., September 27th, 1928.

Sir:-

I beg to forward and recommend for payment the under-noted Touchwood Agency vouchers for the hardware, freighting and the wiring of the Farming Instructor's house at the Gordon's School. Tenders were not called for the hardware, the Punnichy Hardware being the only local source of supply.

No. 613	Punnichy Hardware,	Punnichy, Sask.	458.65
No. 619	E. A. Day, Freighting	" "	89.25
No. 620	R. Goodwin, Wiring	" "	29.25

Department authority is dated May 31st, 1928, letter No. 121-1-5.

Your obedient servant,

W. M. Graham,
Indian Commissioner.

IN YOUR REPLY REFER TO
No. 312-1 C.E.
ALSO TO DATE OF THIS LETTER

COMMISSIONER'S OFFICE,
ED
REGINA, SASK., December 17th, 1928.

Sir:-

I beg to inform you that it has been necessary to have the generator at the Gordon's Indian Residential School overhauled.

In correspondence with the Agent regarding this matter he states that from his own observations a great deal of the trouble lies in the human element. There have been different men in charge of this plant during the past four years; some experienced no trouble whilst others had nothing but trouble, all depending upon their experience and common sense. The Agent goes on to say that while he was at the school with a local electrician the school engineer started to disconnect the batteries from the generator while the latter was running full speed, but he was stopped in time. On the way back to Punnichy the electrician who was sent out to fix the plant stated that it would be all right with a new generator if it was left in capable hands and not monkeyed with.

Dept. too much interested in this

I am writing this letter to impress upon the Department the absolute importance of seeing that the school authorities employ competent help to run these expensive machines. I am satisfied in my own mind that thousands of dollars are wasted annually through mismanagement of these plants, and I have been harping on this subject for some time hoping that a change would be made. It is hard to stand by seeing this destruction going on without making some comment on it. The plants are up-to-date and in no time there are large bills for unwarranted expenditures.

Your obedient servant,

W. M. Graham,
Indian Commissioner.

Sir:-

I beg to inform you that the $150.00 for painting at the Gordon's Indian Residential School, authorized in Department letter 121-1-5 dated the 9th of July, 1928, will not be used. The Department are aware of what the management at this school has been and I thought it only a waste of money to authorize the Principal who was there during the summer to go on with this work. An item of $200.00 was placed in the 1929-30 Estimates for interior painting and kalsomining. This should cover whatever painting is required there during the coming fiscal year.

SCHOOLS BRANCH
JAN 30 1929

Sir,-

In forwarding credit voucher No.5660 with cheque No.89052 for $1009.75, being unexpended balance of amount advanced in connection with barn and other buildings at the Gordon Reserve Indian School, I wish to point out that the painting and several small pieces of work were not completed before winter set in and cannot be done until Spring. I trust the amount herewith returned will be available then, as I presume you would rather have the advances in connection with this work accounted for ,now that no more work can be done. If this amount will not be available after April 1st, a certain amount of material could be purchased before that date.

Your obedient servant,

W.M.Graham.
Indian Commissioner.

The Secretary,
Department of Indian Affairs,

Ottawa, January 30, 1929.

Sir:

I have your 312-11A C.E. of the 23rd instant, enclosing voucher covering an expenditure of $990.25 and a cheque for $1,009.75 in accounting for the advance which was sent you in connection with repairs and painting to the barns and other buildings at the Gordon Indian Residential School. In this connection, it is noted that certain of the work was not finished, and an amount of approximately $1,000 will be available in the Estimates for 1929-30 for its completion. You may apply for this advance when considered timely by you next spring.

Your obedient servant,

J. D. McLEAN

INDIAN COMMISSIONER'S OFFICE.
REGINA, SASK., February 2nd, 1929.

Dear Mr. Scott:-

Confirming my telegrams to you regarding the Gordon's school fire, at the time of writing, 1 o'clock Saturday, the only information I have had over the phone is that they have not as yet discovered the cause of the fire. Mr. Moore is out there now holding an investigation and when I receive his report it will be forwarded to you at once. In the meantime, I can assure you that everything possible is being done to take care of the children. I expect there will be around thirty going to Elkhorn . There is building accommodation there for that number. It might be a good idea to take some to the File Hills School later on.

FEB 6 1929
BRANCH

The loss is a great one; it was really a splendid building and we were just getting things lined up - a new Principal and a first class Farming Instructor who was going to make changes there. The stock and other buildings, of course, will be looked after by the members of the staff. At the time of writing, I cannot tell you just what the Church authorities intend to do. They will likely want to carry on some of the work at the old stone building. Mr. Christianson is in Alberta, Mr. Murison is at Saddle Lake and Mr. Hamilton is in bed.

I will write you when I get further particulars.

Yours very truly,

W. M. Graham
Indian Commissioner.

WILLIAM SWAN, Mem. R.A.I.C.

ARCHITECT

Reb. 9th, 1929.

W. M. Graham, Esq.,
Indian Commissioner,
Regina.

Dear Sir:-

Re. Gordons School.

In accordance with your instructions of Wednesday last I have made an inspection of the remains of the school and beg to report as follows;-
The footings are of course perfectly good, and the basement walls up as far as the concrete and tile construction goes are O.K. This means that from the top of the footings there is 5'.6" of concrete and tile wall that is fit to build on. That is 1'6" above the ground.
The asphalt mastic flooring of the basement is burnt but this has protected the sub-floor of concrete which will require no repairing.
The walls of the boiler room and tank room are in good condition, although the chapel above was completely destroyed.
The water tanks and filtration plant appear to be generally O.K. except for the gauges and small pipe connections. The two low-pressure steam heating boilers appear to be little the worse except for gauges etc.
The hot water tank is O.K.
Many of the cast iron radiators, I think, could be salvaged, although they are all mixed in the debris in the basement.
The two metal fire escapes can be reused.
A large number of bricks could be salvaged and used for backing up and interior partition walls.
The large chimney to boiler room is O.K., but although the kitchen chimney is standing I am of the opinion that it should be taken down; it would be dangerous to work around it. All the laundry machinery is a complete loss. The engine and generator are also a loss, but the switch-board and storage batteries were saved from the fire. If the intentions are to rebuild I would like to suggest that the building be of fire-proof constructions. This could be of the lighter type such as used in many of our city schools; brick and tile walls with Massillon Bar joist construction for floors, and partition walls of gypsum tile. Stairways of concrete or steel. I am of the opinion that such a structure, built from the same plans, with minor changes in layout, could be put up for less than the original cost of the school.

Indian Affairs. (RG 10, Volume 6310, file 654-5, part 4)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

Library and Archives Canada / Bibliothèque et Archives Canada
www.collectionscanada.gc.ca

It must be considered that all excavating, footings, concrete floors, and part basement walls are already in place. The water supply is piped to the building, the septic tank is connected to the basement, and all underground plumbing is in. The rainwater tank is also in position.

If such work is contemplated it might be a good idea to have the indians undertake to clear the debris away before they commenced their spring work on the land.

If there is anything further that I can do for you in this matter I shall be only too pleased to have your instructions.

Yours faithfully.

(Sgd) Wm. Swan.

P.S. I may say that during my inspection I had the opportunity to talk with Mr. Williams, who I believe was boys' supervisor, and he tells me that he was with the engineer when they both went to the boys' lavatory to put out the fire. They went in from the playroom but the smoke was too thick for them to stay in so they went out and around to break in the windows, and then got down to work on the burning partition with portable extinguishers. but as the fire was in behind the asbestos wainscotting on this wall they were unable to put it out and in a few minutes the upper part of the partition near the ceiling was flaming. He is of the opinion that no blow-torch was used that day; and if it was I see no reason for using it near that partition. Also, seeing that there was no wiring in the partition, the theory of a short circuit is out.

COMMISSIONER'S OFFICE,
REGINA, SASK., 12th. February, 1929

Dear Mr. Scott:-

I am enclosing herewith copy of a report that I received from Mr. Wm. Swan, of Punnichy, who, as you know, had charge of the construction work at the Gordon School. He is most reliable and the report contains a lot of valuable information for the Department. I am not in favour, however, of having Indians remove this debris unless there is a competent foreman in charge and perhaps two or three white men. The Indians can do a certain amount of the work but to leave them alone at it would only be a waste of money. It seems to me this is work that should be done without any delay.

I doubt if we are going to be able to carry on the classroom work there at the present time. The building is not at all suitable and there is no accommodation for the teachers.

Yours very truly,

W. M. Graham,
Indian Commissioner.

What else should be done to preserve the remains available

DLS

Feb. 28, 1929.

MEMORANDUM FOR DR. SCOTT.

A letter has been received from Commissioner Graham enclosing a report from Mr. Swan, who acted as Inspector of Construction during the erection of the Onion Lake School recently destroyed by fire, in which it is stated that the footings, foundations, and concrete floors of the old building are in good condition. Many of the hot water radiators can be salvaged although at the present time they are mixed in the debris in the basement of the building. A large quantity of brick can also be salgaged.

Mr. Graham has recommended that the building be cleaned up without delay, and it would appear that it would be adviseable that this be done, and arrange for the proper protection of the foundation and any materials that can be saved and stored so as to be available if a new building is erected.

February 26, 1929.

Dear Mr. Graham:

I have your 312-11A C.E. of the 18th instant. I note that Reverend Mr. Stanford is remaining at the Gordon School and that arrangements are being made to carry on with the farming there. I have also noted that the church authorities would like to conduct a day class in the frame annex to the old school.

The Department approves of this arrangement and you may erect a small building at an estimated cost of $550 as a temporary teacher's residence. This building can be used, later, as a warehouse in the event of reconstruction of the school. You may purchase the desks, blackboards, etc., on the list which accompanied your letter. The books, however, which form the second part of the list, will be ordered from the King's Printer. The Department will allow salary at the rate of $90 per teaching month in the case of the two Misses Atwater. The expenses of looking after the farm and stock should be met by the church authorities, and, if deficits occur, the Department will give consideration to reimbursement.

Yours very truly,

Duncan C. Scott

Sir:

I have your No. 312-11A C.E. of the 13th instant, informing the Department that a day school is now in operation on the Gordon's Reserve.

In this connection it is noted that you have forwarded 800 pounds of biscuits. You may also arrange to supply a quantity of flour and beef from time to time to meet the requirements in making soup.

You may arrange for the purchase of a cook stove of a type suitable for the purpose for which it is required. It is noted you estimate the cost of the stove to be approximately $50.

Please forward accounts in the usual manner covering the expenditure incurred.

Your obedient servant,

A. F. MacKenzie,

COMMISSIONER'S OFFICE,
D REGINA, SASK., March 18th, 1929

Sir:-

I beg to acknowledge receipt of your letter of the 14th. instant, with reference to the salvaging of material from the Gordon School. You ask me to give you some idea as to what it would cost to clean up the place and provide storage for the materials worth keeping, and in reply I would say that it is difficult to answer this question. In the first place, all these boilers are down in the bottom of the basement floor and they could not be removed, excepting at considerable cost, and if we were going to protect them from the weather it would mean we would have to go to work and build a temporary shed which would cost a lot of money. Then again, there is a lot of material around that would have to be taken apart. Altogether I believe it would cost $2000.00, if not more, to look after this material for the period of a year, and I think it would pay the Department to seriously consider re-building the school at once. The money that would be spent on housing this material could be applied on a new building. Of course, if the school is not to be rebuilt steps should be taken to remove the boilers, etc. to another part of the country.

Your obedient servant,

W. M. Graham,

DEPT. OF INDIAN AFFAIRS
APR 30 1929
REGINA

EXTRACT FROM LETTER OF W. M. GRAHAM, INDIAN COMMISSIONER, REGINA, DATED APRIL 23RD, 1929, ENCLOSING INSPECTOR HAMILTON'S REPORT ON HIS INSPECTION OF THE SCHOOLS IN THE TOUCHWOOD AGENCY.

Original on File 121-3-6.

The cement work in the barns at the GORDON School is not in good shape but I propose letting this matter stand until I see what the Department intends to do regarding the building of a new school. If a new school is to be erected the necessary work on the barns can be attended to by the men who are on the ground for this purpose. It would not pay to send a man from here to do this work and the same remark applies to the hay track.

Sir:

I wish to refer to that portion of your letter of the 23rd ultimo which is relative to the cement work in the Gordon Indian Residential School barn. If a supplementary estimate is allowed by Parliament, it is the intention to reconstruct the main building, and this repair can be attended to at that time.

Your obedient servant,

A. F. Mackenzie,
Acting Asst. Deputy & Secretary.

COMMISSIONER'S OFFICE,
REGINA, SASK., May 13th, 1929.

Sir,-

In connection with voucher No. 5922, which is herewith enclosed, I wish to make the following explanation,-

Last January I had some correspondence with the Principal of Gordon's school regarding the purchase of wire and staples, which had been authorized, as I wished the accounts to be forwarded to Ottawa before the end of March. On Feb. 1st I received a quotation from the Punnichy Hardware Store ,but owing to the school being burned that day, this matter was lost sight of in the confusion that followed,in fact, I did not know whether the school work was to be continued or not. The Principal did not again mention this matter till about ten days ago. As he said the fence was badly needed I order the wire and staples and trust the account will be paid.

Your obedient servant,

W.M. Graham.

GORDON'S SCHOOL. GORDON'S RESERVE. PUNNICHY.

REQUISITION FOR PROVISIONS TO BE USED FOR THE NON-RESIDENT CHILDREN OF THE RESERVE ATTENDING THE DAY SCHOOL.

In addition to the 25 children in Residence at the School there are 2 belonging to the School Farm Instructor, a and 1 belonging to the Reserve Farm Instructor, and 14 others from the Reserve. The 3 belonging to the Farm Instructors bring their own dinner. The others have been given dinner, usually stew with meat, rice, vegetables, biscuits and milk from the School supplies.

On March 13th the school received from the Touchwood agency Beef 50lbs; Tea 4lbs; Rice 50lbs and biscuits 100 lbs. Later we received a large shipment of biscuits, a good part of which is still on hand.

Provisions asked for, for future use.

Beef	14 lbs per week. or
Clear Bacon	50 lbs.
Sugar	50 lbs
Salt	50 lbs.
Beans	100 lbs
Peas	50 lbs
Prunes	50 lbs
Raisins	50 lbs
Apricots	50 lbs
Soap	1 Case

Milk and Vegetables are being supplied by the School.

Dear Sir;

Re.Rebuilding of Gordon School.

I understand from Commissioner Graham that it is proposed to rebuild the Gordon School recently destroyed by fire. If such is the case you will no doubt require supervision of the work as soon as the contract is let;and I would be pleased to undertake this duty on the same terms as I did the original inspections for. You will see from the records that I made a daily inspections with a weekly report,and I also sent in weekly progress photos.

I am fully aware that Mr.Gurney Orr,your Dept.Architect, will be preparing the plans;but in the event of you requiring any plans or measurements of the existing foundations etc.I shall be pleased to make or obtain same for you;In fact any architectural work that the Dept.may require done by a resident architect in the West I would be pleased to have the opportunity to do.

Yours faithfully,

Wm Swan.

Dear Sir;

Re.Proposed Gordon School.

In going over the blueprints of the old school with the Rev.Archdeacon Knowles I find that he has very little to suggest in the way of minor changes that could be done without changing the exterior walls.He does think that the clothes room off the sewing room could be thrown into the sewing,thus doing away with a dark room and leaving the clothes cupboards to open in the sewing room.

I would recommend that the interior walls be brick or hollow tile,using much of the old brick,that is still good, on basement walls. I have sketched in red on the blue prints the position of the engine room which was built after the filtration plant was installed.It would of course be necessary to include for this in a new building.

The other small items marked are merely changes which were made during construction of the old building,and which should be followed again.

Yours faithfully, W. Swan.

COMMISSIONER'S OFFICE,
REGINA, SASK., May 21st, 1929

Sir:-

I beg to acknowledge receipt of your letter of the 13th. instant No. 121-1-5, informing me that if funds are provided by Parliament it is the intention to proceed with the rebuilding of the Gordon's School, enclosing copies of the floor plans of the school as it appeared before the fire, and asking me to interview the Church authorities and return the blue prints with any changes that might be desired. In reply I may say that I had Archdeacon Knowles, who represents the Church in this matter, and who is the practical man on the committee, go over the plans with Mr. Swan. He has only suggested one slight change and that is that the clothes room be thrown open into the sewing room, and this to me seems a practical suggestion as it will give more light and there is no reason why it should be partitioned off.

There is a slight extension to be made to the engine room. We had this extension framed in before, but we might as well have the concrete basement walls extended to include it.

Aside from the above there are no changes that I can suggest, and these changes are noted on the blue prints which are returned herewith.

The front entrance steps as shown by the red marks were constructed on these lines in the original building.

-With regard-

The Secretary,
Dept. of Indian Affairs,
Ottawa.

Indian Affairs. (RG 10, Volume 6310, file 654-5, part 4)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

www.collectionscanada.gc.ca

With regard to the construction of this building, it seems to me that the Department would do well to employ Mr. Wm. Swan to supervise the work, for, as you know, in reconstructing a building where there has been a fire, very close scrutiny of the work is necessary, and in Wm. Swan we have one of the most competent men in the province of Saskatchewan. He did good work when the original building was erected here and I would strongly advise the Department to employ him again.

The work of clearing up and removing the debris should be proceeded with without delay.

Your obedient servant,

W. M. Graham,
Indian Commissioner.

Ottawa, May 22nd, 1929.

Sir:

I have your letter of the 8th instant, enclosing a requisition from the Principal of the Gordon's School for provisions to be used for the non-resident children of the Reserve who are attending the day school.

In this connection I have to say that you may arrange for the purchase and delivery of a sufficient quantity of the following provisions for the purpose of serving a midday meal for the balance of the present school year, to June 30th, next, viz., beef, sugar, salt, beans and peas. Only the quantities of these supplies to last until the date mentioned are to be purchased at the present time. The Department is not prepared to authorize the supplying of prunes, raisins and apricots, as these provisions are not furnished for midday lunches at day schools. You may also purchase and have delivered 12 cakes of laundry soap. If this school reopens after the summer holidays, the Principal should renew his request for the supplies required for the midday meal.

Your obedient servant,

Sir:-

I enclose and recommend for payment Touchwood Agency Voucher No. 939 for $48.10 representing material purchased to refloor the old horse stable at the Gordon's School. The Acting Agent advised me that the old flooring was very badly worn and in several places there were large holes, making it dangerous for stabling stock in. I therefore directed him to purchase the required amount of lumber to repair it.

COMMISSIONER'S OFFICE,
W. REGINA, SASK., 5th July, 1929.

Sir:-

I forward and beg to recommend for payment Touchwood Agency Voucher No. 994, representing the purchase by the Reverend Principal at Gordon's school of roofing material to cover the school granaries. These were leaking very badly and, as they housed the seed grain and flour belonging to the school, repairs were urgent, and I advised the Principal to purchase the material and told him that I would submit the voucher to Ottawa and ask for payment. Under the circumstances I would be glad if the Department would bear the cost amounting to $21.20.

Your obedient servant,

W. M. Graham

Dear Sir:

Re - Indian School, Punnichy.

We understand that in the near future your department will be calling for tenders for a building to be erected on the above farm. I wonder if you could give me the names of those who are tendering on this so that we could get in touch with them with reference to material. We have a yard a Punnichy, Saskatchewan, with a complete stock and we are very desirous of getting in touch with any tenderers on the same.

Thanking you for sending us the names of the tenderers on this, we remain,

Yours very truly,

COMMISSIONER'S OFFICE.
D REGINA, SASK., July 17th, 1929

Sir:-

Re my telegram of the 13th. instant, inquiring as to when it is proposed to commence operations on the erection of the Gordon Residential School, I beg to say that there is great urgency that this work should be proceeded with without delay. I would hate to see the children who belong to this school and who are attending the Elkhorn school temporarily, put in a winter at Elkhorn, and if there is much further delay this will be the only place we can keep them. Aside from this the Department is going to pay a lot more for having this school erected if the work is going to run on into the late fall, as the days will be short and the cost of labour is high. At best I do not suppose we could expect to get it started now until the 15th. of August, which is rather late to start building in this country. I hope the Department will be able to rush this matter.

Your obedient servant,

W. M. Graham,
Indian Commissioner.

Dear Mr. Graham,-

My attention has been drawn to telegram of July 13th and your letter of July 17th with reference to the construction of the Gordon Residential School.

Plans for this school will be ready in a few days and tenders will be advertised for at once. I notice from the file that we asked for your suggestions with reference to the plans on May 13th. We wrote you on June 19th and asked for an answer to this letter and the plans were returned under a letter dated May 21st which did not reach the Department until June 21st. I do not know how to explain this matter. Everything has been done since the receipt of your letter of June 21st to expedite the matter.

Yours very truly,

COMMISSIONER'S OFFICE,
D REGINA, SASK., August 6th, 1929

Dear Mr. Scott:-

I have your letter of the 2nd. instant No. 121-1-15, and I note that the plans for the new Gordon's School will be ready in a few days, and that tenders will be advertised for at once.

With reference to that part of your letter in which you advise me that my letter of the 21st. of May did not reach the Department until the 21st. of June, I may say it was only yesterday I discovered the reason for this delay. The plans were received in my office on Saturday, May 18th. Knowing the great importance of the matter I dealt with it on Monday, the 20th., made the necessary changes in the plans and dictated the letter. This letter was written on Tuesday, the 21st., and together with the plans was sent out to Mr. Hay for mailing on that date, but for some reason he did not send it out and it remained in his desk for fully three weeks before he discovered it. When he did come across it again he mailed it without making any mention to me of the fact that it had been delayed, nor did he mention it to the Clerks in the office until some time after the 13th. of July on which date I sent you a telegram asking if the Department had come to any decision regarding the building. The whole incident is most regrettable, and the cause of the delay for this period of three weeks rests entirely with this office. I note, however, that the letter did reach the Department on the 21st. of June last.

Yours very truly,

W. M. Graham,
Indian Commissioner.

Sir,-

Replying to your letter of the 12th instant with reference to the schedule of wages required for the proposed new Indian Residential School near Punnichy, Sask., I beg to say the schedule should include practically all classes of labour, similar to the schedules furnished for other buildings in the past.

The building will cost approximately $100,000. and if a contract is awarded it will probably take in the neighborhood of nine months to build same.

I would be glad to receive this Schedule at the earliest possible date.

LABOUR CONDITIONS

Fair Wages Clause.

(1) All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on, or if there be no custom of the trade as repects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages, and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof. Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may, in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classication of work so as to give effect to such decision. In case the contractor shall fail so to do or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the contractor and any such payment shall for all purposes as between the contractor and the Government be deemed and taken to be payment to the contractor, and the contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

Fair Wages Clause or Schedule to be posted.

(2) The Contractor shall post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the Fair Wages Clause or Schedule inserted in his contract for the protection of the workmen employed, also any decision of the Minister of Labour under the preceding paragraph.

Books, etc., of contractor open for inspection.

(3) The Contractor shall keep proper books and records showing the names, trades, and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, and the books or documents containing such record shall be open for inspection by the Fair Wage Officers of the Government at any time it may be expedient to the Minister of Labour to have the same inspected.

Payment by contractor for labour, etc.

(4) The Contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of the contract in respect of work and labour performed in the execution of the contract unless and until he shall have filed with the Minister in support of his claim for payment a statement attested by statutory declaration, showing (1) the rates of wages and hours of labour of the various classes of workmen employed in the execution of the contract; (2) whether any wages in respect of the said work and labour remain in arrears; (3) that all the labour conditions of the contract have been duly complied with; nor, in the event of notice from the Minister of Labour of claims for wages, until the same are adjusted. The Contractor shall also from time to time furnish the Minister such further detailed information and evidence as the Minister may deem necessary in order to satisfy him that the conditions herein contained to secure the payment of fair wages have been complied with, and that the workmen so employed as aforesaid upon the portion of the work in respect of which payment is demanded have been paid in full.

Indian Affairs. (RG 10, Volume 6310, file 654-5, part 4)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

Library and Archives Canada / Bibliothèque et Archives Canada
www.collectionscanada.gc.ca

(5) In the event of default being made in payment of any money owing in respect of wages of any workmen employed on the said work and if a claim therefor is filed in the office of the Minister and proof thereof satisfactory to the Minister is furnished, the said Minister may pay such claim out of the moneys at any time payable by His Majesty under said contract and the amounts so paid shall be deemed payments to the Contractor. Power to pay wages in default of payment by contractor.

(6) These conditions shall extend and apply to moneys payable for the use or hire of horses or teams, and the persons entitled to payments for the use or hire of horses or teams shall have the like rights in respect of moneys so owing them as if such moneys were payable to them in respect of wages.

(7) With a view to the avoidance of any abuses which might arise from the sub-letting of contracts it shall be understood that sub-letting, other than such as may be customary in the trades concerned, is prohibited unless the approval of the Minister is obtained; sub-contractors shall be bound in all cases to conform to the conditions of the main contract, and the main contractor shall be held responsible for strict adherence to all contract conditions on the part of sub-contractor; the contract shall not, nor shall any portion thereof be transferred without the written permission of the Minister; no portion of the work to be performed shall be done at the homes of the workmen. Sub-letting, etc.

(8) All workmen employed upon the work comprehended in and to be executed pursuant to the said contract shall be residents of Canada, unless the Minister is of opinion that Canadian labour is not available or that other special circumstances exist which render it contrary to the public interest to enforce this provision. Workmen to be residents of Canada.

LABOUR CONDITIONS

Fair Wages Clause.

(1) All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on, or if there be no custom of the trade as repects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages, and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof. Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may, in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classication of work so as to give effect to such decision. In case the contractor shall fail so to do or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the contractor and any such payment shall for all purposes as between the contractor and the Government be deemed and taken to be payment to the contractor, and the contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

Fair Wages Clause or Schedule to be posted.

(2) The Contractor shall post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the Fair Wages Clause or Schedule inserted in his contract for the protection of the workmen employed, also any decision of the Minister of Labour under the preceding paragraph.

Books, etc., of contractor open for inspection.

(3) The Contractor shall keep proper books and records showing the names, trades, and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, and the books or documents containing such record shall be open for inspection by the Fair Wage Officers of the Government at any time it may be expedient to the Minister of Labour to have the same inspected.

Payment by contractor for labour, etc.

(4) The Contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of the contract in respect of work and labour performed in the execution of the contract unless and until he shall have filed with the Minister in support of his claim for payment a statement attested by statutory declaration, showing (1) the rates of wages and hours of labour of the various classes of workmen employed in the execution of the contract; (2) whether any wages in respect of the said work and labour remain in arrears; (3) that all the labour conditions of the contract have been duly complied with; nor, in the event of notice from the Minister of Labour of claims for wages, until the same are adjusted. The Contractor shall also from time to time furnish the Minister such further detailed information and evidence as the Minister may deem necessary in order to satisfy him that the conditions herein contained to secure the payment of fair wages have been complied with, and that the workmen so employed as aforesaid upon the portion of the work in respect of which payment is demanded have been paid in full.

Indian Affairs. (RG 10, Volume 6310, file 654-5, part 4)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

Library and Archives Canada / Bibliothèque et Archives Canada
www.collectionscanada.gc.ca

(5) In the event of default being made in payment of any money owing in respect of wages of any workmen employed on the said work and if a claim therefor is filed in the office of the Minister and proof thereof satisfactory to the Minister is furnished, the said Minister may pay such claim out of the moneys at any time payable by His Majesty under said contract and the amounts so paid shall be deemed payments to the Contractor. Power to pay wages in default of payment by contractor.

(6) These conditions shall extend and apply to moneys payable for the use or hire of horses or teams, and the persons entitled to payments for the use or hire of horses or teams shall have the like rights in respect of moneys so owing them as if such moneys were payable to them in respect of wages.

(7) With a view to the avoidance of any abuses which might arise from the sub-letting of contracts it shall be understood that sub-letting, other than such as may be customary in the trades concerned, is prohibited unless the approval of the Minister is obtained; sub-contractors shall be bound in all cases to conform to the conditions of the main contract, and the main contractor shall be held responsible for strict adherence to all contract conditions on the part of sub-contractor; the contract shall not, nor shall any portion thereof be transferred without the written permission of the Minister; no portion of the work to be performed shall be done at the homes of the workmen. Sub-letting, etc.

(8) All workmen employed upon the work comprehended in and to be executed pursuant to the said contract shall be residents of Canada, unless the Minister is of opinion that Canadian labour is not available or that other special circumstances exist which render it contrary to the public interest to enforce this provision. Workmen to be residents of Canada.

Ottawa, August 19th. 1929.

Dear Mr. Brown,-

I have your letter of the 17th instant enclosing general clause for use in connection with the proposed Gordon's Indian Residential School near Punnichy, Sask. I would prefer, however, to insert in my specifications a schedule of labour in place of a fair wage clause. Would it be possible for you to furnish me with this sometime this week.

Yours truly.

R. Gurney Orr.

Dear Mr. Orr,-

Re: Labour Conditions for
Gordon's Indian School,
near Punnichy, Sask.

I have received your letter of the 19th instant in the above matter and have taken up the subject again with our western Fair Wages Officer, who wires me this morning that the question is receiving attention at his hands and that he will advise us as early as possible. I mentioned to him that you would like to have the schedule this week if possible.

Yours truly,

Gerald H. Brown,
Acting Deputy Minister of Labour.

R

Dear Sir,-

With reference to my letter of the 22nd instant submitting a fair wages schedule for use in connection with the proposed contract for a new Indian Residential School near Punnichy, Sask., an error was made in the rate for Bricklayers and Masons, which should be $1.45 per hour, instead of $1.35 as listed. Will you please see that this correction is made in the schedule referred to.

Yours truly,

Gerald H. Brown,
Acting Deputy Minister of Labour.

ALL MESSAGES ARE SUBJECT TO THE FOLLOWING CONDITIONS, WHICH HAVE BEEN APPROVED BY THE BOARD OF RAILWAY COMMISSIONERS FOR CANADA, UNDER ORDER 162, DATED MARCH 30, 1916.

It is agreed between the sender of the message on the face of this form and the Company with which the message is filed that said Company shall not be liable for damages arising from failure to transmit or deliver, or for any error in the transmission or delivery of, any unrepeated telegram, whether happening from negligence of its servants or otherwise, or for delays from interruptions in the working of its lines, for errors in cipher, or obscure messages, or for errors from illegible writing, beyond the amount received for sending the same.

To guard against errors, the said Company will repeat back any telegram for an extra payment of one-half the regular rate; and, in that case, the said Company shall be liable for damages suffered by the sender to an extent not exceeding $200.00, due to the negligence of the said Company in the transmission or delivery of the telegram.

Correctness in the transmission and delivery of messages can be insured by contract in writing, stating agreed amount of risk, and payment of premium thereon at the following rates, in addition to the usual charge for repeated messages, viz.: one per cent. for any distance not exceeding 1000 miles, and two per cent. for any greater distance.

The said Company shall not be liable for the act or omission of any other Company, but will endeavor to forward the telegram by any other Telegraph Company necessary to reaching its destination, but only as the agent of the sender and without liability therefor. The said Company shall not be responsible for messages until the same are presented and accepted at one of its transmitting offices; if a message is sent to such office by one of the said Company's messengers, he acts for that purpose as the sender's agent; if by telephone, the person receiving the message acts therein as agent of the sender, being authorized to assent to these conditions for the sender. The said Company shall not be liable in any case for damages, unless the same be claimed, in writing, within sixty days after receipt of the telegram for transmission.

No employee of the said Company shall vary the foregoing.

CLASSES OF SERVICE

TELEGRAMS

A full-rate expedited service.

NIGHT MESSAGES

Accepted up to midnight at reduced rates, to be sent during the night and delivered on the morning of the next day after their date at places where the Company's offices are open on Sundays, and on the morning of the next ensuing business day at places where the Company's offices are not open on Sundays.

DAY LETTERS

A deferred day service at rates lower than the standard telegram rates as follows: One and one-half times the ten-word day message rate for the transmission of 50 words or less, and one-fifth of the initial rate for such 50 words for each additional 10 words or less. The minimum charge for transmission over the Company's lines of any Day Letter will be 45 cents.

Day Letters shall be written in plain English, or may be written in French between offices in Canada. Code language is not permitted.

Day Letters may be forwarded by the Company as a deferred service, and the transmission and delivery of such Day Letters are, in all respects, subordinate to the priority of transmission and delivery of full-rate messages.

Day Letters may be delivered by the Company by telephoning the same to the addressees and such deliveries shall be a complete discharge of the obligation of the Company to deliver.

Day Letters are received subject to the express understanding and agreement that the Company does not undertake that a Day Letter shall be delivered on the day of its date absolutely and at all events; but that the Company's obligation in this respect is subject to the condition that there shall remain sufficient time for the transmission and delivery of such Day Letter on the day of its date during regular office hours, subject to the priority of the transmission of full-rate messages under the conditions named above.

NIGHT LETTERS

Accepted up to midnight for delivery on the morning of the next day after their date at places where the Company's offices are open on Sundays, and on the morning of the next ensuing business day at places where the Company's offices are not open on Sundays, at rates still lower than its standard night message rates as follows: The standard day rate for 10 words for the transmission of 50 words or less and one-fifth of the initial rate for such 50 words for each additional 10 words or less. The minimum charge for transmission over the Company's lines of any Night Letter will be 30 cents.

Night Letters shall be written in plain English, or may be written in French between offices in Canada. Code language is not permitted.

Night Letters may, at the option of the Company, be mailed at destination to the addressees, and the Company shall be deemed to have discharged its obligation in such cases with respect to delivery by mailing such Night Letters at destination, postage prepaid.

APPROVED BY THE BOARD OF RAILWAY COMMISSIONERS FOR CANADA UNDER ORDER 162, DATED MARCH 30, 1916.

It is agreed between the sender of the message on the face of this form and this Company, that said Company shall not be liable for damages arising from failure to transmit or deliver, or for any error in the transmission or delivery of any unrepeated telegram, whether happening from negligence of its servants or otherwise, or for delays from interruptions in the working of its lines, for errors in cypher or obscure messages, or for errors from illegible writing, beyond the amount received for sending the same.

To guard against errors, the Company will repeat back any telegram for an extra payment of one-half the regular rate, and in that case the Company shall be liable for damages, suffered by the sender to an extent not exceeding $200., due to the negligence of the Company in the transmission or delivery of the telegram.

Correctness in the transmission of messages can be insured by contract in writing, stating agreed amount of risk, and payment of premium thereon at the following rates, in addition to the usual charge for repeated messages, viz: one per cent. for any distance not exceeding 1,000 miles, and two per cent. for any greater distance.

This Company shall not be liable for the act or omission of any other Company, but will endeavor to forward the telegram by any other Telegraph Company necessary to reaching its destination, but only as the agent of the sender and without liability therefor. The Company shall not be responsible for messages until the same are presented and accepted at one of its transmitting offices; if a message is sent to such office by one of the Company's messengers he acts for that purpose as the sender's agent; if by telephone the person receiving the message acts therein as agent of the sender, being authorized to assent to these conditions for the sender. This Company shall not be liable in any case for damages, unless the same be claimed, in writing, within sixty days after receipt of the telegram for transmission.

No employee of the Company shall vary the foregoing.

DAY LETTERS.

This Company will receive DAY LETTERS, to be transmitted at rates lower than its standard telegram rates, as follows: one and one-half times the ten-word Day message rate shall be charged for the transmission of fifty (50) words or less, and one-fifth of the initial rate for such fifty words shall be charged for each additional ten (10) words or less.

DAY LETTERS may be forwarded by the Telegraph Company as a deferred service and the transmission and delivery of such DAY LETTERS are, in all respects, subordinate to the priority of transmission and delivery of full-rate messages.

DAY LETTERS Code, Cypher Foreign languages, etc. will be accepted, in accordance with provisions under rule 4.

DAY LETTERS may be delivered by the Telegraph Company by telephoning the same to the addressees, and such deliveries shall be a complete discharge of the obligation of the Telegraph Company to deliver.

DAY LETTERS are received subject to the express understanding and agreement that the Company does not undertake that a DAY LETTER shall be delivered on the day of its date absolutely and at all events, but that the Company's obligation in this respect is subject to the condition that there shall remain sufficient time for the transmission and delivery of such DAY LETTER on the day of its date during regular office hours, subject to the priority of the transmission of full-rate messages under the conditions named above.

Department of Indian Affairs,
Ottawa, Canada.

Dear Sirs:- Attention Mr. R. Gurney Orr

We wired you yesterday as per attached copy because the information on the blue print regarding the laundry at Punnichy Indian School appears to be a little misleading in that it states that all machines are to be motor driven, whereas we are given to understand from the Indian representative in Regina that a gasoline engine is to be installed from which a line shaft will be driven, and this line shaft will be belted to the machines below.

We hope that we may hear from you today as some of the contractors who are tendering on this equipment are anxious to get their price just as soon as possible.

Yours very truly,

STANLEY BROCK LIMITED.

Dear Sir;

Re.Gordon School.

May I refer you to my letter of the 8th May last in which I offered my services as inspector of construction on the rebuilding of the above school.

The site is six miles south of Punnichy;I could therefore make a daily inspection and send you a weekly report as I did during the erection of the original building.

You will of course appreciate that I am fully conversant with the layout of the old building and the peculiarities of the site etc.,and can therefore serve you better than a stranger to the conditions.

In the event of the contract being let this fall,may I hope to be appointed to serve the Department in this capacity?

Your obedient servant,

W. Swan

RECEIVED SEP 26 1929 INDIAN AFFAIRS OFFICE

W.M.Graham Esq.,
Indian Commissioner,
Regina.

Dear Sir;

Re. Gordon School.

As suggested by you on your visit to Punnichy this week, I herewith offer a few suggestions which would in my opinion save the Dept. of Indian Affairs money in the building of the new school.
In the first place the removal of the large amount of debris from the basement will take some time after the contract is let, and as the weather cannot be relied upon for more than another two months; it would appear that things could be speeded up by having the indians and other local labour start to clear this at once. This work could be done either by the day under a good foreman, or by the load of material moved. Threshing on the reserves and in the surrounding country is now finished and labour is therefore available at very reasonable rates. In doing this all materials that are fit to use could be checked and stacked, and a price allowed by the contractors doing the work. This would also give the inspector of the work a better chance to say what could or could not be reused. There are about twenty thousand brick that could be cleaned and reused in the interior walls of the basement, at least 75% of the angle iron lintels could be used again, and the two fire escapes have only been damaged by falling bricks, and can be easily put in usable condition by a blacksmith. The two pressure tanks with their supports are in good condition and only need refitting with gauges etc. The filtration plant only needs new fittings to put it in working order. There is a considerable quantity of 12" and 6" tile which could be cleaned up and used.
There is also a quantity of material that can be salvaged and sold, which would not be used in the new building; such as the two old boilers, the hot water tank and heater, the cast iron columns, and all the old radiation and pipes. Much of the latter would be merely sold as junk, but is an item that might be considered.
The white glazed brick in the kitchen came through the fire in very could condition, except for a slight gray tinge the glaze appears to be perfectly good, and as the largest portion of these are still standing in the walls they could be salvaged

with very little breakage.
If this work of cleaning up were done by the Department it would certainly result in them having a large quantity of material to sell which many of the contractors are now figuring on using without allowing very much for same. You can readily see that unless some definite check is made of this old material much of it will find its way into the new building, and the Department will not have credit for it; and what is worse the use of it may be very detrimental to the new structure.

Yours faithfully,

W. Swan

DEPARTMENT OF INDIAN AFFAIRS
CANADA

DEPT. OF INDIAN AFFAIRS
SEP 30 1929
RECORDS

IN YOUR REPLY REFER TO
No. 312-11A C.E.
ALSO TO DATE OF THIS LETTER

COMMISSIONER'S OFFICE,
ED
REGINA, SASK., September 26th, 1929.

Dear Mr. Scott:-

While at Touchwood the other day I examined what remains of the Gordon's School, this being the first time I had seen it since it was burnt.

I found the basement filled almost to the ground level with brick, iron pipes, radiators, boilers and other material. Mr. Swan, who supervised the building of the first school, happened to be on the ground looking over the site, and in a conversation with him, he thought it would have been a wise plan had the Department removed all this material and salvaged anything that might be used in the new building. I asked Mr. Swan to write me a letter giving his view on the matter, which he has done, and I herewith enclose same.

I might say that the Department would be very well advised to employ Mr. Swan as Building Inspector on the new school. He is very competent, and as it requires more than an ordinary man to look after this job and check up the work, especially in view of the fact that some of the old material will be used in the reconstruction, I would advise that Mr. Swan be given the job. I have already recommended this man for the position, but have heard nothing from the Department on the matter.

Yours very truly,

W. M. Graham,
Indian Commissioner.

Dear Sir,

Attached is our tender for Gordon's Indian Residential School near Punnichy, Sask., to be built on the old site.

Our tender includes cupboards in kitchen, clothes storage and dormitories. These cupboards are shown on the plans but they are not specified. As we were the Contractors on the old building, we expected that these cupboards would be required in wood, similar to those previously installed. If these cupboards are not intended to be supplied under the contract, please deduct from our submitted tender ONE THOUSAND, FOUR HUNDRED AND SEVENTY FIVE DOLLARS ($1,475.00).

Yours very truly,

Duncan C. Scott, Esq.,
Deputy Supt. of Indian Affairs,
OTTAWA.

Dear Sir;-

We are enclosing you our bid on the re-building of Gordon Indian School at Punnichy, Sask.

We have examined the job as it stands today, and a few things we might mention are as follows;- If four dormitory wood cupboards, as we take them to be, and four passage wood cupboards, and all of the winter clothes closets we figure are in wood, if the above are not to be put in the new building in wood, you can deduct from our tender $1015.00.

While specifications do not specify the toilet partitions to be in steel, we have included them all in steel with steel doors, on second floor only.

While we have gone carefully over the building and examined every part of it we can see, we do not think that there is a part of the concrete footings or walls that require to be re-built in new concrete, therefore we have not estimated on any part of the outside wall footings or wall above footings which is in concrete now to be in new work. A few places require a little repairing. We have included this, but nothing for new walls or footings under outside walls of the /

September 5, 1929.

TENDERS WANTED.

SEALED tenders addressed to the undersigned and endorsed on the envelope, "Tender for [illegible] Gordon's Indian Residential School [illegible] Punnichy, Sask.," will be received up to noon of the 30th of September, 1929, for the erection of the above mentioned buildings.

Plans and specifications may be seen at the Indian Office at Winnipeg, Regina and Punnichy, at the Post Office at Saskatoon, and at the Department of Indian Affairs at Ottawa.

Each tender must be accompanied by an accepted cheque on a chartered bank of Canada for ten per cent. of the amount of the tender, payable to the order of the undersigned (War Bonds of the Dominion or Canadian National Railway Bonds will also be accepted as security, or Bonds and cheque if required to make up an odd amount), which amount will be forfeited if the person or persons tendering decline to enter into a contract when called upon to do so, or fail to complete the work contracted for.

The lowest or any tender not necessarily accepted.

DUNCAN C. SCOTT,
Deputy Superintendent General
of Indian Affairs.

Department of Indian Affairs,

DEPARTMENT OF INDIAN AFFAIRS

CANADA

Oct. 4, 1929.

Memorandum: Dr. Scott.

Plans and specifications were prepared for the rebuilding of the Gordon's Indian Residential School destroyed by fire last year. The tenders closed at noon on the 30th day of September, and in response the following have been received,-

Shoquist Bros., 211 Duchess St., Saskatoon,	$133,895.00
A. W. Cassidy & Co., Ltd., Saskatoon,	$137,700.00
R. N. Wyatt, Lombard Bldg., Winnipeg,	$138,997.00
Macaw & Macdonald, Winnipeg,	$139,800.00
Smith Bros. & Wilson, Ltd., Regina,	$143,470.00
P. W. Graham & Sons, Ltd., Moosejaw,	$144,993.00
J. Albert Tremblay, Winnipeg,	$147,068.00
Poole Construction Co., Regina,	$150,843.00
The Hipperson Construction Co., Regina,	$175,315.00

The lowest tender is submitted by Shoquist Bros. of Saskatoon, and as their tender is fair and reasonable I beg to recommend that it be accepted.

Funds are provided for this work in the vote for Indian Education.

Mr. Duncan C. Scott,
Deputy Supt. General of Indian Affa irs,
Ottawa, Ont.

Dear Sir,

We would greatly appreciate it if you would let us know to whom the contract has been awarded for the construction of the Gordon's Indian Residential School near Punnichy, Sask.

If you could also let us know the total amount of the contract, the unit prices bid, and the names and addresses of all bidders, we would be much obliged to you.

Do not bother to write a letter. Just make a memo on the margin or reverse side of this letter and mail it in the enclosed return envelope.

Trusting that you will be kind enough to co-operate with us by letting us have this information as promptly as possible, so that we in turn can pass it on to engineers, contractors and manufacturers throughout Canada, we remain,

Yours truly,

M. B. Chambers.

KODAK SAFETY ▲ FILM +●

Ottawa, October 7, 1929.

121-1-15

His Excellency

The Governor General in Council.

The undersigned has the honour to report that the same being necessary, tenders were called for the rebuilding of the Gordon's Indian Residential School, near Punnichy, in the Province of Saskatchewan, which was destroyed by fire last year, and that the following were received in regular form and accompanied by the required deposit security:-

Shoquist Bros., 211 Duchess St., Saskatoon, Sask.,.....$133,895.00
A.W.Cassidy and Co., Ltd., Saskatoon, Sask.,.....$137,700.00
R.N.Wyatt, Lombard Bldg, Winnipeg, Man.$138,997.00
Macaw and Macdonald, Winnipeg, Man.,...$139,800.00
Smith Bros and Wilson, Ltd., Regina, Sask.,....$143,470.00
P.W.Graham and Sons, Ltd., Moosejaw, Sask., ...$144,993.00
J.Albert Tremblay, Winnipeg, Man.,.....$147,068.00
Poole Construction Co., Regina, Sask.,..$150,843.00
The Hipperson Construction Co., Regina, Sask.,....$175,315.00

The Architect of the Department of Indian Affairs has reported that the lowest of the above tenders, namely, that of Shoquist Bros., of Saskatoon, in the Province of Saskatchewan, is fair and reasonable, and the undersigned has the honour to recommend that it be accepted pursuant to the requirements of Subsection 2 of Section 36 of the Public Works Act. Funds for this purpose have been provided from Parliamentary Appropriation for Indian Education.

PRIVY COUNCIL CANADA

Certified to be a true copy of a Minute of a Meeting of the Committee of the Privy Council, approved by His Excellency the Governor General on the 17 th OCTOBER 1929

DEPT. OF INDIAN AFFAIRS
DEC 18 1929
RECORDS

The Committee of the Privy Council have had before them a Report, dated 7th October, 1929, from the Superintendent General of Indian Affairs, stating that same being necessary, tenders were called for the re-building of the Gordon's Indian Residential School, near Punnichy, in the Province of Saskatchewan, which was destroyed by fire last year, and that the following were received in regular form and accompanied by the required deposit security:-

Shoquist Bros., 211 Duchess St., Saskatoon, Sask.	$133,895.00
A.W. Cassidy and Co., Ltd., Saskatoon, Sask.	137,700.00
R.N. Wyatt, Lombard Bldg., Winnipeg, Man.	138,997.00
Macaw and Macdonald, Winnipeg, Man.	139,800.00
Smith Bros and Wilson, Ltd., Regina, Sask.	143,470.00
P.W. Graham and Sons, Ltd., Moosejaw, Sask.	144,993.00
J. Albert Tremblay, Winnipeg, Man.	147,068.00
Poole Construction Co., Regina, Sask.	150,843.00
The Hipperson Construction Co., Regina, Sask.	175,315.00

The Architect of the Department of Indian Affairs has reported that the lowest of the above tenders, namely, that of Shoquist Bros., of Saskatoon, in the Province of Saskatchewan, is fair and reasonable, and the Minister recommends that it be accepted pursuant to the requirements of subsection 2 of Section 36 of the Public Works Act. Funds for this purpose have been provided from Parliamentary Appropriation for Indian Education.

The Committee concur in the foregoing recommendation and submit the same for approval.

The Honourable
the Superintendent General
of Indian Affairs.

Dear Sir:

We acknowledge receipt of your wire worded as follows:

"Your tender Gordon's School Accepted
Duncan C. Scott",

and we wish to express our appreciation of this expression of confidence, assuring you that our work will conform to the high standards demanded by your Department.

We deferred immediate acknowledgement anticipating receipt of further instructions. However, the following day we proceeded to Punnichy, visited the site and made preliminary arrangements, and commenced this morning dispatching trucks to the job, and carpenters for the erection of the temporary buildings for housing and boarding our men on the job and storage of materials. We are arranging to haul material immediately, in order to take advantage of the present good condition of the dirt roads leading from Punnichy, and expect to hear definite instructions from your representatives.

Assuring you of our co-operation at all times, we remain

Yours truly,

SHOQUIST BROTHERS

DEPT. OF INDIAN AFFAIRS
NOV 4 1929
RECORDS

October 31, 1929.

Secretary,
Department of Indian Affairs,
Ottawa, Ontario.

Sir:

Your favor of the 19th instant, mailed from Ottawa on the 23rd instant and received by us on the 28th instant, confirming your telegraphic advice of acceptance of our tender for the rebuilding of Gordon's Indian Residential School, together with contract forms in duplicate have received our attention.

We note that entire completion according to the contract is to be effected by April 20, 1930, and in this connection we may state, that our estimated period of construction as shown on our tender form called for six months, and we may frankly state that this refers to six construction months, because it is impossible to lay brick or do concrete work in the severe temperatures obtaining during a portion of the winter months, and we feel sure that the Chief Architect or his representative would not permit this work to be done under climatic conditions, that might seriously detract from the permanence of the completed structure. We are at present engaged in cleaning the site and delivering material to the job, and will do everything in our power to rush this work to completion compatible with good workmanship, and we trust that this will meet with the approval of the Department of Indian Affairs.

We have completed execution of the Agreement in duplicate, and take pleasure in inclosing same herein. Doubtless one copy will be returned to us in due course.

Yours truly,

DEPT. OF INDIAN AFFAIRS
NOV 22 1929
RECORDS

Dear Sir;

Re.Gordon's Indian Residencial School.

Upon receipt of your letter of Oct.22nd last,appointing me temporarily as inspector of construction for the rebuilding of the above school,I arranged to visit the site with Messrs.Shoquist Bros.,the contractors.This we did on Oct.27th.
The contractors had had a small gang of men on for several days previous to this,clearing out debris and building bunk houses etc.
In discussing matters with the contractors I found that they had the impression that they would have all material salvaged;As I did not read the specifications that way I consulted with the Commissioner,Mr.Graham,on the matter, and he advised that a careful check be made of materials with a view to having the Department credited with any that was of value.
I also found that the Contractors did not expect to carry-on all winter,but in view of the fact that I had not seen their contract~~s~~ the matter was left for further discussion with Mr.Gurney Orr.
I continued to make a daily inspection of the work as the cleaning up proceeded,and found that the concrete floors over all of basement had suffered nothing from the fire; the walls to grade were in good condition except for the inner four inches of tile which was removed and concrete poured to give an eighteen inch solid concrete wall.
Mr.Gurney Orr was in Punnichy on the fourth and fifth of Nov.,and all points in question were gone over and settled.
Since Mr.Orr's visit the cleaning up has been completed; the old boiler room and laundry walls wrecked and new footings and foundation walls poured for rear additions.
The Contractors have the cement,crushed stone, and lime on the job;the lime and cement being properly housed in tight sheds.
Mr.Hooff the estimator and representitive of Shoquist Bros.

William Swan, MEM. R.A.I.C.
Architect

was down to the job today in response to a telephone call from me regarding shipment of tile. This I found was being delayed because the twelve by twelve were not available for two weeks. Arrangements were made with another firm to ship four by twelve and eight by twelve immediately.
The steel plans from the Dominion Bridge Co., were checked a and we are assured of quick action in the shipping of all steel.
I expect to see the bricklayers on the job by Thursday next, as the mill have promised delivery of the basement window frames by Wednesday.
Footings for the new colum[illegible] have been excavated for, and these will be poured as soon as reinforcing steel is delivered.
The plumbers have arranged to have a man on the job right away to check over the existing underground pipes, so that all breaking and patching of existing concrete floor may be done at one time.
I have written the R. A. Lister Co., of Winnipeg for a layout of the electrical plant so that if necessary we may arrange for a larger generator room, but up to date I have not received this.
With the definite understanding between Mr. Gurney Orr and the Contractors that the work was to proceed during the winter months I am striving to have them deliver materials so that a large gang of men may be kept busy until we have any extremely cold weather. At the present time we are having a mild spell and the early fall of snow has practically disappeared.

Your obedient servant,

W. Swan

Inspector of Construction,

P.S.
It would expedite the work of the Contractors in rushing the work of other trades if they could have another three set of plans. Can these be sent to them?

Ottawa,Ont.

Dear Sir:- re Building of Gordon's Indian Residential School near Punnichy, Sask.,according to plans and specifcations 613 - Shoquist Brothers.

Shoquist Brothers old customers of ours have required some financing against the above contract. We notice that Clause 5 of the contract states that the contractor shall not assign,transfer, etc., without the consent in writing of the Superintendent in General first having been obtained.

Will you please advise us if you will accept an assignment of this contract in favor of The Royal Bank of Canada and undertake to pay the proceeds to us on satisfactory completion of the work by the contractors.

Thanking you for an early reply,

Yours truly,

RMH*DMW. Manager.

Dept.of Indian Affairs,
Ottawa.

Dear Sir;

Re.Gordon's Indian Residential School. Report No.2.

Since my last report on Nov.16th work on the above has gone on at only a fair rate;although delivery of material has been good. Delay in the delivery of reinforcing steel for column footings,and of the basement window frames,has held things up. On Nov.26th we had a mild day during which the column footings were poured,and covered in to protect from frost.
On the 27th the basement frames were being set and three bricklayers were at work;there are now eight bricklayers at work and they are doing a good job.
During the last two days the weather has turned quite cold,and I am holding up the pouring of any concrete.Brickwork is going on;the men using hollow metal mortar boards with a low flat lamp inside,and as the mortar is put on the boards hot from being mixed with hot water and hot sand,the work is alright.
I have received a letter from R.A.Lister Co.,in which they stated that the generator room as shown was quite large enough. The new pump has been connected up with the existing supply line and there is now a good supply of water on the job.
The south wing of the building is now up eighteen courses of brick above the concrete foundation wall,and there are several courses up on the remainder.With anything like reasonable weather during the next two weeks we should be ready for the ground floor steel joists.
I have made an appointment with the stone-cutter to come up from Regina on Tuesday next and go over the whole of the cut stone required,so that there may be no delay or errors in the shipments of stone as required.
On Nov.28th I issued the first certificate for payment.

Your obedient servant,

W. Swan

Gentlemen:-

PUNICHY INDIAN SCHOOL.

In connection with the above, we have quoted through our Winnipeg Office on the radiator and other steam traps required for the building.

We have been advised that your approval must be obtained before our equipment can be considered. We are offering the Sarco Traps on behalf of our Principals, The Sarco Company of Canada Limited, whose Traps are made in Canada. We enclose herewith literature descriptive of this equipment and will be glad to submit samples if required.

Our Winnipeg Office carries the Sarco Traps in stock and gives service on Western requirements.

The Sarco Traps are used in many buildings in Manitoba and Saskatchewan and also very extensively by both the Canadian National and Canadian Pacific Railways.

Sarco Traps are mentioned in the specifications of such Architects and Engineers in Canada as -

Ross & McDonald.
John Archibald.
Wilson & Kearns.
Royal Bank of Canada Architects.
Canadian National Railways Architects.

There is no question as to the quality and service of the Sarco Traps, which have in a good many instances been put in on a five year guarantee basis.

Trusting to have a favorable reply in this connection, we beg to remain,

Yours very truly,

PEACOCK BROTHERS LIMITED

Dear Mr.Orr;

Re.Gordon School.

Just after my letter asking for the extra bluprints was posted,I received both those for Shoquist Bros.,and those for the Rev.Mr.Stanford.The latter wishes to thank you very much for same.

I am also in receipt of yourletter informing me about the extra allowance for my car.Many thanks for this;it will be very acceptable for new chains,anti-freeze,winter oil,etc., which I have had to get for my daily drives.

I have today received copies of the photographs taken on the job last Saturday,and I am enclosing them with this.

I have prepared a detail (½ inch) of front entrance as changed to use the existing steps.I gave the stone man a copy when he was up from Regina yesterday,will send you one along.

Yours faithfully,

W. Swan

Dear Sir;

Re.Gordon's School,Punnichy. Report No.3.

Since my report of Nov.30th last the above work has shown only fair progress.The weather in the West has been very cold for this time of year,and during several parts of days the bricklayers have not worked.I really do not consider it wise to have bricks laid up under the present conditions, and am notifying the Contractors that no more brick will be laid,after the walls are up to joist level,until more favourable weather.I feel that with the low temperatures now prevailing,it would be necessary to enclose the work in a temporary shell of boards and paper to secure a first class job of brickwork for bearing walls.I am writing Mr.Gurney Orr in detail on this subject.
At the present time only four of the steel columns have been set;none of the cast iron columns or steel beams have been delivered yet.One car load of Massillion steel joists is on the job. Practically all the frames from the mill are on the job,and most of the stone sills have been delivered.
All the face brick are on the job,and the hollow tile is being delivered quickly.
By Tuesday the 17th I expect the bricklayers to be up to joist level when they will leave the work until milder weather after January.In the meantime the steel will be erected and the steel joists put in place.

A certificate was issued and mailed to you yesterday.

Your obedient servant,

W. Swan

Sarco Steam Trap No. 7

The above sketch shows the trap in section

THE SARCO Steam Trap differs from every other type of steam trap, as it utilizes the pressure of a fluid (a heavy hydrocarbon oil) hermetically sealed within a tube.

When the Sarco trap is connected, any steam in the line heats the expansion cartridge, the piston of which instantly moves out and closes the vent. As condensation collects, this cools the expansion cartridge and the trap opens, whereupon water is immediately ejected to the discharge. Steam, following again, heats the cartridge and closes the trap. No live steam ever passes but the lines are kept free of water at all times.

The use of the thermostatic principle is of great merit. The difference in temperature of steam and of the cooled condensation gives ample power to operate the trap. The action is at all times unfailing as the operating oil never tires and there are no friction losses.

No airbinding is possible as air opens the trap in the same way as the water does.

A simple adjustment enables the user to discharge condensation at various desired temperatures.

The elimination of wasteful storage space in the trap, toggle joints, levers, buckets or floats, means less cost and less wear. Thus, the use of the Sarco ensures lower first cost and lower maintenance with maximum efficiency.

For variable steam pressure, use Sarco Steam Trap No. 9. (List No. 22.)

For heating systems, use Sarco Radiator Traps Type E. (List No. 8.)

For heavy service, use Sarco Blast Traps Nos. 9-3 and 9-4. (List No. 26.)

SARCO RADIATOR TRAPS TYPE E

for

Vapor, Vacuum and Low Pressure Heating Systems (up to 25 lbs.)

List Prices F. O. B. Bethlehem, Pa.		Dimensions		CAPACITY — DIRECT RADIATION	
				Vapor System	Vacuum System
½"	$ 6.00	A 3¼"	B 1½"	200 Sq. Ft.	250 Sq. Ft.
¾"	8.00	A 3¼"	B 1½"	600 Sq. Ft.	800 Sq. Ft.
1"	15.00	A 3⅝"	B 2"	1500 Sq. Ft.	1800 Sq. Ft.

Construction and Design — Body and cap are heavy cast bronze; union and tail piece, heavy brass. Body and cap rough nickel finish with polished trimmings. Supplied in angle, offset, and straightway patterns.

Thermostatic Element — Uses Sarco large diameter heavy wall helical bellows, ensuring even distribution of movement and preventing the crystallization of metal that occurs with both disc and annular ring bellows type elements.

Capacity — There is a full ¼" vertical movement from open to closed position, ensuring rapid circulation and extra large capacity.

Steam Tight — Element is fitted with an enclosed frictionless center guide, ensuring perfect seating. Large diameter tubing and specially proportioned vaporizing fluid give maximum closing pressure, preventing any steam leakage. No valve wear, as conical valve head gives line contact only at seat.

Case Suspension — Elements are not attached to cap, but are held rigidly in place without springs. This construction simplifies installation. All parts are quickly interchangeable.

Durability — Sarco multifold, helical bellows have a heavy wall, deeply corrugated, and make the construction the most rugged used in any type of radiator trap. This guarantees longer life than that of any other thermostatic valve.

Operation — Steam from radiator heats the motor element and vaporizes the sensitive expansive liquid it contains. The pressure of the vaporized liquid expands the motor element and closes outlet of trap. As condensation collects, the vapor in thermostatic element cools and returns to a liquid state, whereupon the trap immediately opens. The cycle is repeated and all condensation is discharged promptly but no steam can get by.

SARCO RADIATOR TRAPS TYPE H

for

Vapor, Vacuum and Low Pressure Heating Systems (up to 25 lbs.)

List Prices F. O. B. Bethlehem, Pa.	Dimensions	CAPACITY — DIRECT RADIATION	
		Vapor System	Vacuum System
½" angle type $5.00	3¼" x 1½"	125 Sq. Ft.	150 Sq. Ft.

SARCO RADIATOR TRAP, Type H, which is a companion to the standard Sarco Type E Radiator Trap, is particularly designed for small heating units up to 125 to 150 square feet of radiation surface used in vapor or vacuum heating systems. It is most efficient for living room, bed room and bath room radiation in apartments and hotels. For residence heating, it fills all radiation requirements under usual conditions.

Sarco Radiator Traps are designed to give maximum lift with minimum temperature drop. This high lift, two or three times greater than in traps of the flat disc type, permits discharge of small scale and sediment found in heating systems and prevents dirt clogging the radiators. There is no loss of vapor or of heat units and while freely and promptly discharging the condensation and air, Sarco Traps close positively, preventing the leakage of steam.

Body and cap are of cast bronze, nickel finished with polished trimmings; union nut and tail piece are of heavy brass. The expansion or motor element of Type H is fastened rigidly to the cap. Type H Radiator Traps use Sarco large diameter, heavy wall, helical bellows ensuring even distribution of the movement and avoiding the crystallization of metal that occurs with expansion elements of either disc or annular ring bellows types.

The large diameter tubing and the sensitively proportioned operating fluid contained in the motor element ensure a positive closing pressure. The conical valve head gives line contact only, thus eliminating wear on valve seat. The ample number of corrugations in Sarco Trap elements guarantee longer life than that of any other thermostatic valve.

Steam from radiator heats the motor element and vaporizes the sensitive expansive liquid it contains. The pressure of the vaporized liquid expands the motor element and closes outlet of trap. As condensation collects, the vapor in thermostatic element cools and returns to a liquid state, whereupon the trap immediately opens. The cycle is repeated and all condensation is discharged promptly but no steam can get by.

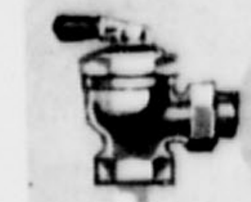

Sarco Type H Radiator Trap has standard dimensions and is supplied in the ½" angle style only. For other sizes and for offset and straightway types, use List No. 12, describing Sarco Type E Radiator Traps.

SARCO PACKLESS INLET VALVES

THERE are many semi-packless Inlet Valves on the market, but the Sarco is of the *true packless* type. By the use of the well-known Sarco helical tubing, it avoids the necessity for packing of any kind. As a result, we can furnish an Inlet Valve which is opened or closed by a three-quarter turn of the handle, the pressure on which is at all times even, smooth and regular.

The ordinary valve is usually hard to turn and leaks after a few months of service. The semi-packless types, relying on springs for packing effect, bind and are therefore jerky in their action.

The Sarco helical tubing, which takes the place of packing is not annularly corrugated but made in the form of a helix or spiral. The construction is unique and ensures a perfectly even distribution of the movement without the least danger of stressing the metal beyond its fatigue point. This feature ensures long life and reliability.

It is the only type of Packless Valve that should be used on a system which will operate below atmospheric pressures, as the most difficult leaks to detect and overcome, also the most disastrous to the vacuum, are those occurring through faulty packing glands in inlet valves.

The Sarco Inlet Valve has a heavy brass body, well nickeled and with pleasing lines. Each valve is fitted with a Jenkins long life composition disc.

Note that the handle is made so that the maximum of strength is obtained. This is achieved by making in one piece the handle proper and the stem connecting with the lift screw. This is a feature found only in Sarco Inlet Valves.

The dial is distinctly marked and will, after years of service, be as readable as when new. It is a handsome, well-built valve and a fit companion for the remarkably successful Sarco Thermostatic Radiator Trap. It can be used on all vacuum and vapor heating systems.

Valves equipped with lever or moulded handles as desired.

Sarco Steam Trap No. 9

The new Sarco Self-Adjusting Steam Trap No. 9 is a development of the universally known Sarco Steam Trap for high and low pressure but is *factory adjusted* and works on widely varying pressures as well as on steady pressure.

It is operated thermostatically and is therefore small in size and low in price.

It has unusually great capacity as it has a large valve area and a quick high lift when discharging.

It closes instantaneously and allows no live steam to pass. It cannot air bind.

It has no toggle joints, levers, buckets, floats, or trouble making parts and as it is all bronze, it cannot rust or stick.

The new Sarco Steam Trap No. 9 is designed on the "balanced pressure" principle. The pressure within the thermostatic, or motor, element balances against the steam pressure and thus the trap is *self-adjusting over the entire range from 0 to 100 lbs.*

It uses the unique Sarco helical bellows made from a seamless bronze tube. The helical form is greatly superior to the annular type of bellows as the movement is distributed over the entire number of corrugations with the result that the life of the bellows is greatly increased. The motor element never tires as it is never unduly stressed.

For a thousand applications in the industrial field the Sarco No. 9 has no rival in size, ease of installation, capacity, efficiency and price. It is the one leading trap for steam jacketed cooking vessels, live drips, high pressure heating coils, pressing machines, laundry equipment, kitchen and hospital fixtures. Also as an automatic high pressure air vent its field is a very large one. It will be supplied freely on 30 days trial for a practical test.

For heavy condensation Types 9-3 and 9-4, using multiple bellows, are particularly recommended.

Sarco Steam Trap No. 7

The above sketch shows the trap in section

THE SARCO Steam Trap differs from every other type of steam trap, as it utilizes the pressure of a fluid (a heavy hydrocarbon oil) hermetically sealed within a tube.

When the Sarco trap is connected, any steam in the line heats the expansion cartridge, the piston of which instantly moves out and closes the vent. As condensation collects, this cools the expansion cartridge and the trap opens, whereupon water is immediately ejected to the discharge. Steam, following again, heats the cartridge and closes the trap. No live steam ever passes but the lines are kept free of water at all times.

The use of the thermostatic principle is of great merit. The difference in temperature of steam and of the cooled condensation gives ample power to operate the trap. The action is at all times unfailing as the operating oil never tires and there are no friction losses.

No airbinding is possible as air opens the trap in the same way as the water does.

A simple adjustment enables the user to discharge condensation at various desired temperatures.

The elimination of wasteful storage space in the trap, toggle joints, levers, buckets or floats, means less cost and less wear. Thus, the use of the Sarco ensures lower first cost and lower maintenance with maximum efficiency.

For variable steam pressure, use Sarco Steam Trap No. 9. (List No. 22.)

For heating systems, use Sarco Radiator Traps Type E. (List No. 8.)

For heavy service, use Sarco Blast Traps Nos. 9-3 and 9-4. (List No. 26.)

SARCO RADIATOR TRAPS TYPE H

for

Vapor, Vacuum and Low Pressure Heating Systems (up to 25 lbs.)

List Prices F. O. B. Bethlehem, Pa.	Dimensions	CAPACITY — DIRECT RADIATION	
		Vapor System	Vacuum System
½" angle type $5.00	3¼" x 1½"	125 Sq. Ft.	150 Sq. Ft.

SARCO RADIATOR TRAP, Type H, which is a companion to the standard Sarco Type E Radiator Trap, is particularly designed for small heating units up to 125 to 150 square feet of radiation surface used in vapor or vacuum heating systems. It is most efficient for living room, bed room and bath room radiation in apartments and hotels. For residence heating, it fills all radiation requirements under usual conditions.

Sarco Radiator Traps are designed to give maximum lift with minimum temperature drop. This high lift, two or three times greater than in traps of the flat disc type, permits discharge of small scale and sediment found in heating systems and prevents dirt clogging the radiators. There is no loss of vapor or of heat units and while freely and promptly discharging the condensation and air, Sarco Traps close positively, preventing the leakage of steam.

Body and cap are of cast bronze, nickel finished with polished trimmings; union nut and tail piece are of heavy brass. The expansion or motor element of Type H is fastened rigidly to the cap. Type H Radiator Traps use Sarco large diameter, heavy wall, helical bellows ensuring even distribution of the movement and avoiding the crystallization of metal that occurs with expansion elements of either disc or annular ring bellows types.

The large diameter tubing and the sensitively proportioned operating fluid contained in the motor element ensure a positive closing pressure. The conical valve head gives line contact only, thus eliminating wear on valve seat. The ample number of corrugations in Sarco Trap elements guarantee longer life than that of any other thermostatic valve.

Steam from radiator heats the motor element and vaporizes the sensitive expansive liquid it contains. The pressure of the vaporized liquid expands the motor element and closes outlet of trap. As condensation collects, the vapor in thermostatic element cools and returns to a liquid state, whereupon the trap immediately opens. The cycle is repeated and all condensation is discharged promptly but no steam can get by.

Sarco Type H Radiator Trap has standard dimensions and is supplied in the ½" angle style only. For other sizes and for offset and straightway types, use List No. 12, describing Sarco Type E Radiator Traps.

SARCO PACKLESS INLET VALVES

THERE are many semi-packless Inlet Valves on the market, but the Sarco is of the *true packless* type. By the use of the well-known Sarco helical tubing, it avoids the necessity for packing of any kind. As a result, we can furnish an Inlet Valve which is opened or closed by a three-quarter turn of the handle, the pressure on which is at all times even, smooth and regular.

The ordinary valve is usually hard to turn and leaks after a few months of service. The semi-packless types, relying on springs for packing effect, bind and are therefore jerky in their action.

The Sarco helical tubing, which takes the place of packing is not annularly corrugated but made in the form of a helix or spiral. The construction is unique and ensures a perfectly even distribution of the movement without the least danger of stressing the metal beyond its fatigue point. This feature ensures long life and reliability.

It is the only type of Packless Valve that should be used on a system which will operate below atmospheric pressures, as the most difficult leaks to detect and overcome, also the most disastrous to the vacuum, are those occurring through faulty packing glands in inlet valves.

The Sarco Inlet Valve has a heavy brass body, well nickeled and with pleasing lines. Each valve is fitted with a Jenkins long life composition disc.

Note that the handle is made so that the maximum of strength is obtained. This is achieved by making in one piece the handle proper and the stem connecting with the lift screw. This is a feature found only in Sarco Inlet Valves.

The dial is distinctly marked and will, after years of service, be as readable as when new. It is a handsome, well-built valve and a fit companion for the remarkably successful Sarco Thermostatic Radiator Trap. It can be used on all vacuum and vapor heating systems.

Valves equipped with lever or moulded handles as desired.

Sarco Steam Trap No. 9

The new Sarco Self-Adjusting Steam Trap No. 9 is a development of the universally known Sarco Steam Trap for high and low pressure but is *factory adjusted* and works on widely varying pressures as well as on steady pressure.

It is operated thermostatically and is therefore small in size and low in price.

It has unusually great capacity as it has a large valve area and a quick high lift when discharging.

It closes instantaneously and allows no live steam to pass. It cannot air bind.

It has no toggle joints, levers, buckets, floats, or trouble making parts and as it is all bronze, it cannot rust or stick.

The new Sarco Steam Trap No. 9 is designed on the "balanced pressure" principle. The pressure within the thermostatic, or motor, element balances against the steam pressure and thus the trap is ***self-adjusting over the entire range from 0 to 100 lbs.***

It uses the unique Sarco helical bellows made from a seamless bronze tube. The helical form is greatly superior to the annular type of bellows as the movement is distributed over the entire number of corrugations with the result that the life of the bellows is greatly increased. The motor element never tires as it is never unduly stressed.

For a thousand applications in the industrial field the Sarco No. 9 has no rival in size, ease of installation, capacity, efficiency and price. It is the one leading trap for steam jacketed cooking vessels, live drips, high pressure heating coils, pressing machines, laundry equipment, kitchen and hospital fixtures. Also as an automatic high pressure air vent its field is a very large one. It will be supplied freely on 30 days trial for a practical test.

For heavy condensation Types 9-3 and 9-4, using multiple bellows, are particularly recommended.

Section of 1¼" and 1½" No. 9-3

Heavy Service Steam Traps

No. 9-3 for 0 to 20 lbs.
No. 9-4 for 0 to 100 lbs.

SARCO Heavy Duty Steam Traps No. 9-3 (for 0 to 20 lbs.) and No. 9-4 (for 0 to 100 lbs.) are recommended for rapid discharge of heavy condensation. They are designed for capacity and have unusually large discharge openings. The rated capacities given below are less than the actual test figures and can be greatly increased if a water leg is connected before the trap.

These traps are of the multiple unit type. A number of Sarco motor elements are attached to a screwed disc in the bottom of the trap. When heated by steam they expand and lift a plate to which the valve head is attached. This closes the trap which remains closed until condensation is ready to be discharged. The lower temperature results in contraction of the motor elements and the trap opens. The Sarco No. 9-3 and 9-4 Steam Traps operate on a differential between the pressures inside and outside the Sarco helical bellows of which the motor element is composed. This reduces the work of the trap to a minimum and provides unusually sensitive and reliable functioning.

SARCO STRAINERS

SELF-CLEANING STRAITWAY TYPE
***for* GAS, WATER, OIL, STEAM, ETC.**

STRAINERS in pipe lines are effective insurance against interruption in service, injury to valves and expensive breakdowns. Strainers should be installed before all temperature or pressure regulating valves, and all other automatic valves. They are supplied for steam, oil, water or any liquid.

The Sarco Strainer has a cast iron body with perforated cylinder placed at such an angle as to offer the minimum obstruction to the flow of gas or liquid, but allowing ample cleaning space. The standard screens are made of perforated brass, but where specified, monel or other metal screens can be supplied to practically any specification.

The Sarco Strainer can be placed in horizontal or vertical lines or at any angle, and the blowoff connection permits the strainer being cleaned instantly merely by opening the valve.

SARCO SELF-CLEANING STRAINERS

SUPPLIED for practically any service, screen perforations ranging from 1/64" to ¼" inclusive. Screens having 1/64" are furnished unless otherwise specified and are suitable for either steam or gas. For water, screens having 3/64" perforations are recommended and 1/16" perforations are usually found suitable for oil. Inquiries and orders should specify clearly the type of service and the size perforations most suitable.
Sarco Strainers are made in all sizes from ¼" to 8" inclusive with screwed or flanged connections. Where all brass, extra heavy cast iron, or cast steel strainers are required, special quotations will be given. Screens other than standard brass 1/64", 3/64", or 1/16" will involve an extra charge.

Type SB
With screwed ends and screwed strainer cap up to 1½" inclusive. 2", 2½", 3" screwed ends and flanged strained cap.

THE Sarco combination float and thermostatic trap has been designed to meet the demand for a heavy duty float trap which will not air bind. This is accomplished by means of a thermostatic by-pass incorporated in the trap body, above the maximum water level within the trap. This trap, due to its special design is easily installed. The 1¼" or "FT-1" size has two inlet and two discharge connections and these can be bushed to the required pipe size. The 2" or "FT-2" trap is similar in construction and design with the exception that there is one inlet and one outlet connection.

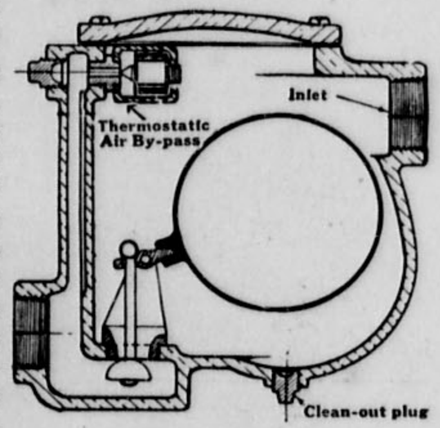

"FT-1" ¾", 1" or 1¼"

Care in design and manufacture is evidenced throughout the Sarco "FT" Float Traps. The body is of cast iron having a carefully machined top and top plate of large size for ease in inspecting the interior. A copper asbestos gasket is used so that the top joint may easily be broken and made up again, using the same gasket. The thermostatic air relief element is identical with those used in the well known Sarco Radiator Trap.

All parts of the valve mechanism are of brass or bronze with the exception of the steel bolts holding it to the body. These are provided with brass nuts so that the entire valve unit can easily be removed. A copper asbestos gasket is used between the base of the valve body and the trap body. The float is of copper substantially constructed of the highest quality. The valve lever is of the rocking bar type, avoiding pivots and parts that stick and bind. In both sizes the underslung valve head is used as in the Sarco No. 9-3 heavy service traps. This design insures large capacity and reduces wear.

As noted in the table, the Sarco "FT" Float Trap capacities are exceptionally large and at a differential of 1 lb. per square inch, the capacity of the "FT-1" is 1,400 lbs. of water per hour; the "FT-2", 10,000 lbs. of water per hour. Sarco Float and Thermostatic Traps are compactly built and can be easily installed in any pipe line.

Applications: We recommend the "FT" Float Trap for use in dripping ends of steam mains, vento heater stacks, large unit heaters, hot water tanks, drip lines and any point in a steam system where the condensate is unusually heavy or comes in sudden rushes. Service details of applications showing diagrammatically the recommendations as made by us are available upon request.

Sarco Temperature Regulators

For Liquids and Atmosphere

Sarco Room or Kiln Temperature Regulator

Type KR-14 Regulator

Principle of Design

SCIENCE has demonstrated that within a certain range the most efficient temperature control can be obtained by the utilization of the contraction and expansion of a sensitive liquid. It is this which forms the motive power of the SARCO Temperature Regulator, operating the unique SARCO helical bellows.

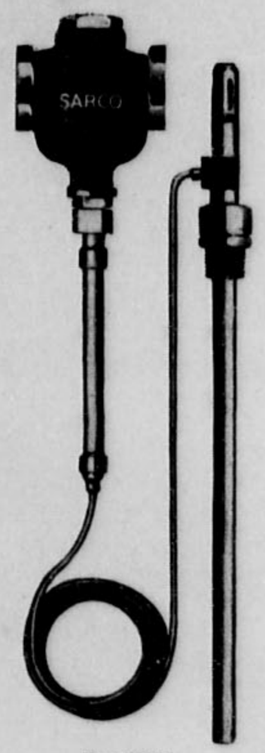

The expansion and contraction of a sensitive liquid permits the design of apparatus far more positive in action than thermostats relying on the use of a volatile fluid, which becomes a gas. With liquid expansion the power is always there. It is certain, positive and reliable. For a given increase in temperature, there will be a given increase in volume. More power is developed by liquid expansion and there is a gentle controlled and *graduated* action of the valve which insures considerable economy in the use of the heating or cooling medium and prevents fluctuations in the controlled temperature of the product.

Sarco Temperature Regulators

For Liquids and Atmosphere

Self-contained and Self-operated

SARCO Temperature Regulators, as compared with other thermostatic devices on the market, are self-contained and more compact, requiring no exterior operating means, such as compressed air, water or electricity. This form of construction, being virtually a power plant in itself, accounts for the success of the SARCO, as it reduces the first cost of the apparatus, lessens installation expense to the lowest possible point, and eliminates maintenance expenses, there being no parts in the thermostat to get out of order. It also avoids the use, in the thermostat itself, of rubber or leather diaphragms, which are of a perishable nature and of metal disc diaphragms, which change their form with considerable resultant inaccuracy. No packing or stuffing boxes are used.

Type TR-21 for Tank Control

Positive Acting

The SARCO Regulators are very substantially constructed and a slight increase in the temperature of the surrounding liquid or atmosphere expands the operating fluid, producing a powerful hydraulic pressure, tending to close the valve, while a decrease in the temperature produces immediately a responsive contraction of the fluid and a gradual opening of the valve. Thus, the action of the regulators is positive and so reliable as to make them suitable for even the most delicate manufacturing processes as well as for ordinary room temperature regulation.

Steam, Water and Gas Valves

The SARCO Regulators operate steam, water or gas valves, and have been widely adopted. They can be supplied with reverse valves to open with rise of temperature.

www.collectionscanada.gc.ca

How Sarco Regulators Operate

IN its essentials the SARCO Temperature Regulator consists of a tube "A" (the thermostatic element) containing a readily expansible, heavy hydro-carbon oil, which, on being heated, generates a pressure that is transmitted through a capillary "D" to a tube "G" (the control element), where it moves a packless piston to operate the valve "K."

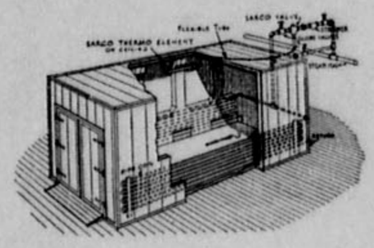

Thermostat "A" and control "G," in communication through "D," a fine bore heavy-wall copper tube, form a closed system, hermetically sealed.

The corrugated tombac tube "B" in thermostat, the length of which is controlled by the adjusting screw "C", serves solely to vary the temperature at which the regulator valve functions, this being accomplished by changing its length in the thermostat. It will be observed that if its length is increased, the oil has less space for expansion and consequently the valve will be actuated at a lower temperature. If it is contracted by turning the regulator head, the valve operates at a higher temperature.

Control "G" contains corrugated tubing "F," which is exposed to the expansive force of liquid in "A" transmitted through "D", and thus acts through piston "H" to move valve stem "I" and open or close valve as may be desired.

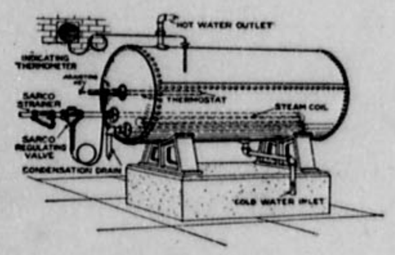

The spring "J" is opposed to the direction of expansion and tends to keep the valve "K" open.

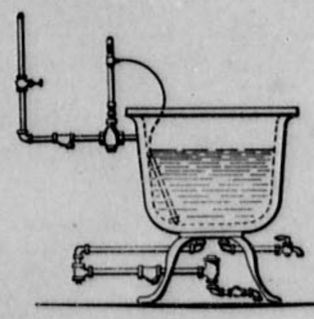

Installation Sketches

This illustrates a dry room equipped with SARCO Regulator, Type KR-14, for any industrial process.

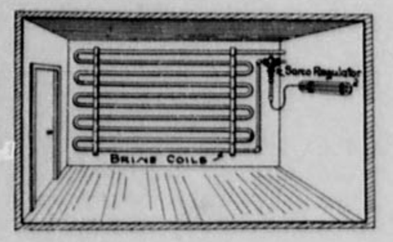

Typical installation of hot water service tank using SARCO Regulator, Type TR-21, controlling a closed coil storage heater.

Typical illustration of SARCO Regulator, Type TR-22, with bulb wholly immersed and used to control temperature of a steam jacketted copper kettle.

Typical installation of brine circulating system using SARCO Regulator, Type TR-25, for temperatures as low as 10° F. The SARCO Regulator using liquid filling with an unvarying coefficient of expansion at any temperature is the best and most widely used thermostat for refrigeration systems.

NOTE: Union nipple for connection in pipe is 1¼" I. P. S.

For Steam Jacketted Kettles or Similar Uses. Type TR-22

Supplied for same range as TR-21 but designed with special bulb thermostat that can be suspended or laid in tank and wholly immersed.

Dimensions A and B are the same as for TR-21. The thermostat can be furnished in various lengths from 12" to 48" to suit special requirements. Prices as for TR-21.

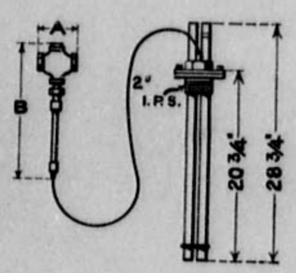

For Dead-end Service Tank Control Type TR-24

This type is furnished with a special over-balanced valve for dead-end service and is particularly suitable where heat is required intermittently as for showers.

Dimensions are special and blue-prints will be furnished on request.

Size	½"	¾"	1"	1¼"	1½"	2"
Price	**$95**	**110**	**115**	**125**	**135**	**145**

For Wide Range Control. Types KR-25 and TR-25

These types are supplied for minimum temperature of 10° F. and maximum of 300° F., with an adjustable range 100° F. (50° F. above and 50° F. below temperature setting specified).

Dimensions of KR-25 (for kiln room control) are the same as those of KR-14. Dimensions of TR-25 (for tank and pipe control) are the same as those of TR-21 except union nipple which is 2" I. P. S.

Size	½"	¾"	1"	1¼"	1½"	2"	2½"	3"
Price	**$85**	**90**	**95**	**100**	**110**	**115**	**130**	**145**

For Pilot Valve Control Type TR-35

This type operates a pilot valve where conditions of installation necessitate a long distance between the valve and the thermostat and for all sizes larger than 6", this type is recommended. It uses a pilot valve, controlling a water, steam or air line to a differential piston valve. This type of regulator operates sensitively and gives wide open discharge. It is designed for an adjustable range of 20° F. but can be furnished (using a TR-25 instead of TR-21 thermostat) for an adjustable range of 100° F. (50° F. above and 50° F. below the specified setting). For wide range adjustability add $10.00 list to prices. Dimensioned blue-prints furnished on request.

SPECIAL TYPES

In addition to the above types, SARCO Temperature Regulators can be furnished to meet special conditions, and inquiries are invited.

How Close Do Regulators Control Temperature?

THE accuracy of control depends to a large extent upon the proper engineering of the installation. The function of a regulator is to maintain temperature mechanically and it does not necessarily correct the faulty design of the apparatus controlled. Under favorable conditions, however, SARCO Regulators maintain temperatures accurately within one-half a degree Fahrenheit.

Important Information to be Given with All Orders

In order that regulators shall be adapted precisely to the conditions under which they are to operate, it is essential that we be given full information as to the requirements.

For what purpose is the installation required?

Size of pipe in which the control valve is inserted, also whether a steam, hot water, cold water or gas valve is required.

Shall valve open or shall it close when temperature rises?

Steam, water or gas pressure in supply line?

Whether thermostat is exposed to corrosive gas or liquid? If so state metals not attacked.

Temperature to be maintained, also maximum and minimum temperature permissible.

Distance between control valve and point at which thermostat is to be inserted or installed.

It is very desirable to protect the regulator valves by installing strainers. These are furnished in all sizes with screwed and flanged connections. (See special list.) They are inexpensive and an excellent insurance against valve trouble. Shall one be included with each regulator?

HOW SARCO TEMPERATURE REGULATORS WORK

(The sketches are diagrammatic only and are not intended to show method of installation. Advice on this when requested, will be gladly furnished on receipt of drawing or blueprint of Supply Lines and Apparatus.)

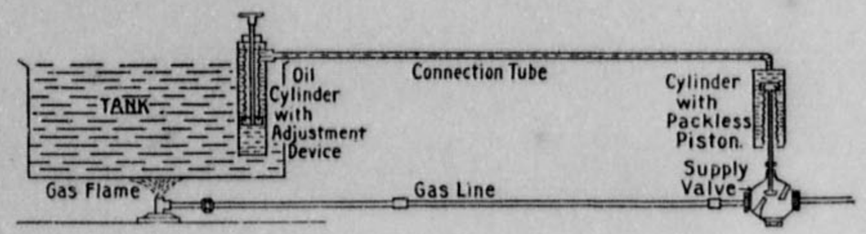

IF a metal cylinder completely filled with oil were hermetically sealed and then heated, the oil would expand with such great force as to split the cylinder. This enormous pressure is utilized in the SARCO temperature regulator. Referring to the illustration below, the oil cylinder communicates through a pipe with another cylinder in which there is a piston, the entire system being completely oil filled. The piston in the piston cylinder actuates a valve. If the oil cylinder is immersed in a tank containing the fluid, temperature of which is to be regulated and that tank is heated, say by a gas flame, the supply of gas to which is regulated by the supply valve, the mode of operation is obvious. When the temperature of the tank rises, heating the oil in the oil cylinder, the expanding oil pushes the piston outward in its cylinder and closes down the supply valve, thus reducing the gas flame. If on the other hand the tank temperature falls, the oil in the cylinder cools and contracts, thus allowing the piston in the piston cylinder to go back under the influence of a spring (not shown) opening the supply valve and thus turning the gas flame higher.

Were the piston in the piston cylinder of the conventional type, trouble would ensue because obviously, successful operation requires that the oil system be absolutely tight, the escape of even a minute quantity of oil altering the whole setting. In other words, it is imperative that the piston packing be leakproof, capable of withstanding the enormous pressures which are involved, and at the same time frictionless. Here the SARCO spirally corrugated tube comes into play, a section of the same being hermetically attached to the outer surface of the piston at one end, and to the inner skirt of the oil cylnider at the other end, as shown in the illustration below. The SARCO spirally corrugated tube will withstand pressures in excess of three thousand pounds per square inch.

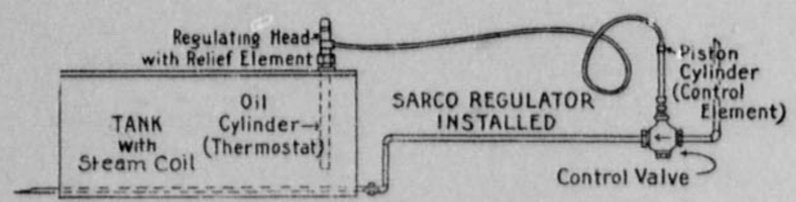

While the regulating system as so far described is complete and would be commercially operative, it is naturally desirable to add some means of adjusting the temperature setting. This is accomplished by having the connection tube issue from the side of the oil cylinder instead of from the top, and then inserting from above a piston which can be adjusted up or down by a regulating screw. When adjusted downward the temperature in the tank need evidently rise less before pressure is transmitted through the connection tube to close the supply valve, and if adjusted upward the temperature must rise higher before closing will take place. The construction is shown in the illustration below. It will be seen that SARCO spirally corrugated tubing is again brought into service to provide a pressure-proof packless flexible fit.

This describes all of the elements of the SARCO regulator with the exception of a relief element which will yield if the pressure after the control valve has been closed should for some special reason continue to rise and exceed even the high limit of strength of the SARCO tubing. That element is a special heavy spring interposed between the manually adjustable head of the rod in the oil cylinder and the piston which the rod pushes. The spring strength is such that it will yield when pressure is too high, restoring itself to normal length when normal conditions are resumed.

The complete system is as below.

The Sarco Temperature Regulator operates gas, steam or water valves and can be used for tank or atmospheric control.

For detailed sectional drawing and description see overleaf.

How Sarco Regulators Operate

(Drawing shows regulator of the tank type T. R. 21, but kiln type K. R. 14 is identical in general construction and operating details)

IN its essentials the Sarco Temperature Regulator consists of a tube "A" (the thermostatic element) containing a readily expansible, heavy-hydro carbon oil, which, on being heated, generates a pressure that is transmitted through a capillary "D" to a tube "G" (the control element), where it moves a packless piston to operate the valve "K."

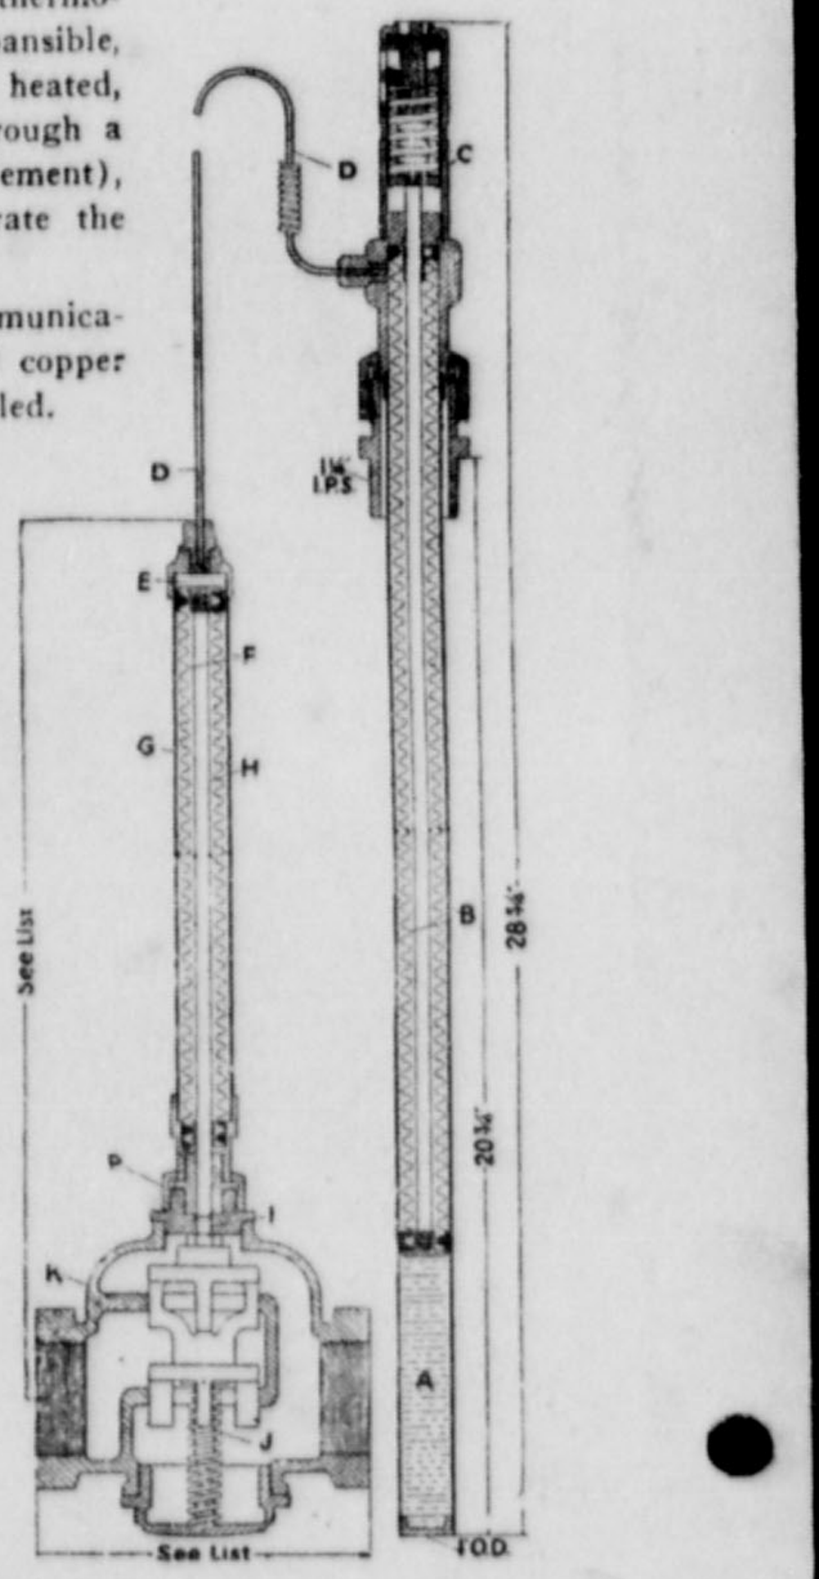

Thermostat "A" and control "G", in communication through "D", a fine bore heavy-wall copper tube, form a closed system, hermetically sealed.

"E" is the operating oil connected thru D with oil in "A".

The corrugated tombac tube "B" in thermostat, the length of which is controlled by the adjusting screw "C" serves solely to vary the temperature at which the regulator valve functions, this being accomplished by changing its length in the thermostat. It will be observed that if its length is increased, the oil has less space for expansion and consequently the valve will be actuated at a lower temperature. If it is contracted by turning the regulator head, the valve operates at a higher temperature.

Control "G" contains corrugated tubing "F", which is exposed to the expansive force of liquid in "A" transmitted through "D", and thus acts through piston "H" to move valve stem "I" and open or close valve as may be desired.

The spring "J" is opposed to the direction of expansion and tends to keep the valve "K" open.

Dear Sirs,-

We have received an order through our Winnipeg Agent, Mr. W. W. Hicks, for Messrs. Beaton & Brady of Saskatoon for one C-541 Leonard Calor Heating Boiler for the Indian School at Punnichy, Saskatchewan.

We are enclosing herewith duplicate blue prints off our drawing E-9255 showing the Boilers which we intend supplying one of which we would ask you to kindly approve and return to us for our files.

If you would like additional prints off this drawing please let us know.

Yours very truly,

E.LEONARD & SONS LIMITED

To the Secretary.

Dear Sir:

We beg to advise you, that we have been awarded the contract of installing the Plumbing and Heating in the Indian Residential School at Punnichy, Sask., by Shoquest Bros. the General Contractors.

Re the matter of radiator valves, radiator traps, return traps, drip traps, and etc., that will be used on this installation. We propose installing it complete with Sarco products.

We herewith ask for your permission and sanction to do so, as we are of the opinion, the Sacro products are equal to the requirements of your specifications.

Yours truly,

Dear Mr.Orr;

Re.Gordon's School.

The Rev.Principal,Mr.Stanford,has asked me about three points on the above;First the matter of the ice house,which you will remember was mentioned at the time of your visit. He wishes to point that if it is the intention of the Department to put ups any such building with the school, he would much appreciate having it done so that he could put up ice in it during February.

His second matter was the possibility of having folding doors between the senior and junior girls' play rooms,so that these rooms could be thrown into one on occasions when the parents of the pupils attend the school in a body.

The third request is that the two windows over the altar might be gothic headed as they are to be glazed with leaded lights;memorial windows to Rt.Rev.Canon Atwater.

After a few days of comparatively good weather we are again in the grip of a below zero spell.

Yours faithfully,

W. Swan

Dear Mr.Orr;

Mr.Stanford,the Rev.Principal of Gordon's School has asked me to mention the matter of the set of blueprints you promised to let him have;he would like to have them so that he can use them in making out his list of furniture.
He also would like to know if they can have two more laundry tubs,andif there could be a small vestry arranged at the entrance to the Chapel;on the flat roof south of the passage.

You will recall discussing the matter of the charge for use of car in driving to and from the job,so I am enclosing a bill made out for $1.00 per day.

My bill for daily inspections has been handed to Mr.Waddy as requested in the letter received at the time of my appointment.

I have some photographs taken of the job but they are not yet back from the finishers,so will send them on at a later date.

Yours faithfully,

W. Swan

Dear Mr. Swan,-

Replying to your letter of the 30th the plans of the Gordon's School that I promised the Reverend Principal were mailed a few days ago and you no doubt have them by now.

With reference to the vestry I think it would be much better to arrange two vestries as shown on plan rather than build one at the entrance to the chapel.

You may also arrange for the installation of two additional laundry tubs.

With reference to the allowance for the use of car I wrote to you the other day with regard to this.

Yours very truly,

William Swan, Esq.,
Punnichy, Sask.

Dear Mr.Orr;

Re.Gordon's School.

You will see from my report of Saturday that we are doing nothing more on the above until the middle of February, unless I have definite instructions from you, as the weather is too severe to permit anything like a decent job being done with the ordinary protective methods of heating materials etc.

I enclose some photographs showing the position of the job on the 21st. Since then all the ground floor steel has been put in place ready for the metal lath.

We had one of the basement columns break in unloading; snapped clean in two when dropped a couple of feet onto the snow. It was a very cold day, about twenty eight below, and cast iron was more like glass. I phoned Shoquist and they wired for a recast, which arrived last Saturday.

I am enclosing my bill for use of car during December. Should this be given to the Indian Agent for O.K. with my other?

Yours faithfully,

W. Swan

Dear Sir:-

Re. Punnichy School, Punnichy, Sask.

We are in receipt of a letter from the Architect Mr. Wm. Swan of Punnichy, giving us a layout of the room for the Lighting Sets. He has also requested us to send you prices on the sets required.

Please note that our 3K.W. Lister-Bruston is now replaced by our 3½K.W. and our 6K.W. by our 7½K.W. Plants. We can supply you with these two Plants, all complete with batteries for $5050.00 F.O.B. Winnipeg. We may state that we have quoted this price to Contractors on these Lighting Sets, and can supply them either tank or radiator cooling (optional), price the same.

The 3½K.W. is illustrated on page 20 of the enclosed catalogue and the 7½K.W. on page 22. Base specifications are shown on pages 31 and 32.

Any information you may wish to have on these Lighting Sets will be promptly forwarded on receipt of word from you.

DEPT. OF INDIAN AFFAIRS
JAN 24 1930
RECORDS

J.D.McLean Esq.,
Assistant Deputy & Secretary,
Department of Indian Affairs,
Ottawa.

Dear Sir;

Re.Gordon's School,Punnichy. Report No.5.

Since my report of Dec.28th last nothing has been done on this job,although delivery of material is still going on.The cut stone is all on the site and most of the window sash.Sand is being delivered steadily.
The weather in the West continues very severe and no building operations involving brick and concrete work are going on.

I am enclosing herewith a third certificate for Messrs, Shoquist Bros.amounting to $17649.00,also copy of their third progress estimate.You will notice that this is dated Jan.4th;the reason for the delay being that I was not satisfied that the money they were receiving was being used to pay for material on the job. I have been in touch with the Dominion Bridge Co.,the Regina Sash & Door Factory,and the North American Lumber & Supply Co., and found that no steel,no millwork,and no brick and tile had been paid for.Of course I had checked up on wages and local cartage previously.I wrote Messrs.Shoquist Bros. that I would not issue further certificates until these accounts had been met;and I am now assured by the N.A.L.Co. who are supplying all brick and tile,cement,lime etc,that their accounts have been met.None of these supply people appear to be worrying about their account,but as the specifications call for regular payments I am insisting upon them.

Your obedient servant,

W. Swan
Inspector of Construction.

Jan. 24th 1930.

R. Gurney Orr Esq.,
Architect,
Dept. of Indian Affairs,
Ottawa.

Dear Mr. Orr;

Re. Gordon's School.

I have prepared a sketch of a nice house such as the Rev. Principal wants, and herew th enclose you a blueprint of same; together with copy of my bill of material taken off to get a figure from the local lumber yard on materials. With the lumber bill at $496.95 I have figured that the hardware, paint, and labor would run the total cost to $700.00. Shoquists would not care to send a man down from Saskatoon right away to do a small job like this, but one of their carpenters is a local man and I could no doubt get him to do it. If you approve of this going ahead will you wire me so it can be completed for the school to put up ice by the middle of February?.

The Principal has been discussing the matter of extra class room accommodation with me. What do you think of carrying the two class rooms the full length of the end projections; cutting out the bath room and putting them on the inside in place of the store rooms. As they would be right on the vent shaft I think it would not be so bad; many of the hotels have bath rooms with only artificial light now; in fact the new C.P.R hotel in Regina is one of such. The large bedroom space is not needed and I think some arrangement could be worked out satisfactorily to give the extra class room length.

Yours sincerely,

W. Swan

Dear Sir,-

With reference to the account as submitted for your salary as Inspector of Construction this account should show in addition to the $6.00 per day an item of $1.00 per day for the use of the car, so if you will have this voucher made out as follows,-

_____days as Inspector of Construction, $6.00 per day,

_____ " for use of Automobile at $1.00 per day,

and then the total, this will avoid having to add the amount for the car when the voucher is sent in here.

Yours very truly,

R. GURNEY ORR.
Architect for the Department.

Ottawa.

Dear Mr.Orr·

Re.Gordon's School.

The Rev.Principal has again been into my office with one or two requests. He would like to have an outside connection for a garden hose both at the front and rear of building.
He states that the Office on right hand of Entrance Hall is used for vaccinations,inoculations etc.,and as a place handing out a certain amount of drugs,and by the Doctor generally for examinations.Could there be a small wash ~~be~~ bowl placed in this?
He is also anxious to have drinking fountains in the Lavatories and Dormitories.

The heating boiler has just arrived today,and will be taken out tomorrow.We have a lot of snow here and I expect that they will have some trouble with it over the bad trails.

I am again enclosing my bill for transportation allowance,although I have to use the horses and cutter now instead of my car.I have only charged for four trips this month.

Yours sincerely,

W. Swan

Feb. 3, 1930.

MEMORANDUM:

Dr. Scott.

With reference to the letter from the Honourable Minister of Labour with regard to the Gordon's School I have to say that when the contract was let last fall it was understood that the work was to be proceeded with throughout the winter when weather conditions were favourable, and work proceeded up to the latter part of December when weather became so cold that it was impossible to lay the brick and be sure of a satisfactory job. The brick walls in this building are supporting walls and great care has therefore to be taken in building in order to avoid unnecessary settlement.

When I was in Punnichy last fall indiscussing this building with Mr. Swan, Inspector of Construction I emphasized that it was the Department's wish that as much work as possible be done during the winter months, but that of course he would have to use his judgment when the weather became severe. From the last report received from Mr. Swan he advises that the work will proceed just as soon as the weather moderates sufficiently to be sure of a good job with the brick work.

Ottawa, February 4, 1930.

My dear Colleague,-

I beg to acknowledge the receipt of your letter of January 29th with inclosure from Mr. Charles H. Watson, of Saskatoon, in which he refers to the erection of the Indian residential school on the George Gordon's reserve near Punnichy, Sask. The officers of the Department have been dealing with this matter, and in the last report received from the Inspector of Construction he advises that the work will proceed just as soon as the weather moderates sufficiently to insure good brick work.

Yours faithfully,

DCL

J.D.McLean Esq.,
Assistant Deputy & Secretary,
Department of Indian Affairs,
Ottawa.

Dear Sir;

Re.Gordon's School,Punnichy. Report No.5.

After a very severe winter work has been started again on the above.On March the first the foreman and one or two men started cleaning up;removing a large amount of snow from the basement etc.,and continued with some steel work.On the 11th six bricklayers were put on,and now there are nine at work. The weather still continues frosty at night,but I am having materials heated,and if very bad during the day stop the brickwork. Material has been delivered all winter and with really good weather a large gang will be on the job and things rushed as much as possible consistant,with good workmanship.

I am enclosing herewith the accounts for materials used on the ice-house completed last month,and in accordance with your instructions have arranged with both the North American Lumber Co.,and the Punnichy Hardware to leave these for payment until after March 31st.This means that in the case of the lumber bill the 10% cash discount may still be deducted You will notice that the total cost of this building is very close to my estimate.

Your obedient servant,

W. Swan

Mr. Wm. Graham,
Indian Commissioner,
Canada Life Building,
Regina, Sask.

Dear Sir:

Re: Gordon School - Punnichy.

I understand that this building is now being erected and would respectfully suggest that in the course of erection would be the most suitable time to make provision for the installation of Electric Refrigeration, even though the Department do not contemplate the installation of the refrigerating machinery at this time but at some later date.

It is highly desirable that a well insulated Refrigerator be constructed and provision made for it during the building operation.

Every new building in the way of a Residential School, Hospital, Apartment etc., makes provision for Electric Refrigeration and while I felt sure the Department must be thinking of it, it is just possible in the maze of detail they may have overlooked it.

Ninety-five percent of the Electric Refrigeration in this Province, extending from as far north as Flin Flon to the American border, has been installed by us and we have a large staff of men available in all parts of the Province who are experts in this matter.

We are noting on an attached sheet some of the Hospitals and Institutions that we have equipped recently and assure you if your Department is interested in refrigeration for the Gordon School we will be glad to furnish full details

Dear Mr.Orr;

Re.Gordon's School.

Referring to my letter of Jan.24th last I may say that the Rev.Principal is still talking about the extra class room area.On the Boys' side we could run the class room the full length and cut out one bedroom,and place the bath room in the corner nearest the Principal's Living Rm.
On the Girls' side the two bedrooms are needed and it would be a case of having an inside bath room.
As things are now going along fast it will be necessary to know if this can be done.If you will wire me on receipt of this I will work out the details should you approve of any such change.

Yours sincerely,

W.Swan

Sir,-

Replying to your letter of the 18th instant, with reference to the providing of electric refrigeration in the new Gordon's School, I beg to say that as there is no electric power available at this point it is not considered advisable to instal an electric refrigerating plant. If same were installed it would have to be operated from the school lighting system and this arrangement would not be economical. An ice house has been provided this winter which will give them ample refrigeration.

Your obedient servant,

A. F. MacKenzie.

Dear Sir;

Re.Gordon's School,Punnichy. Report No.6.

During the past two weeks work has gone on steadily except for a few hours on certain days when it was considered too cold to lay brick in the mornings until the weather had warmed up. The weather generally has been good during the day,but the nights are still cold.I am still having the sand and water heated before mortar is mixed,and slaked lime is being kept in a closed and heated shed.
The walls of the main portion of the building are up to the top of the ground floor level,and we have two floors of the steel joists on.No concrete floors are being run yet,and I intend to hold this off until the weather is safer.
There is still snow on the ground and it is not practicable to do anything on the rough plumbing yet.
The changes to enlarge the classrooms,sanctioned in your telegram of last week,will be carried out,and I have given the contractors a sketch of the changed layout.
Enclosed you will find two photographs showing condition of the building at present.

Your obedient servant,

W. Swan

LIGNITE EQUIPMENT LIMITED
1711 Scarth Street, Regina

April 10, 1930

Mr. W. [redacted]aham,
Dept. of Indian Affairs,
City.

Re - Gordon Indian School - Punnichy, Sask.

Dear Sir:-

As per conversation with you this afternoon with reference to the special burning equipment for Sask.Lignite coal, might say, that we have installed same in the following buildings during the past season:-

Pat Burns & Company, Adanac Brewery, Bartleman Apts., Balfour Apts., Victoria Park Building, Broder Building, Champlain Hotel, Duncan Motors, Westman Chambers, Wood Vallance, Ltd., Queen City Cleaners, Davin School, Normal School, Haultain School, St. Augustine Separate School, Kitchener School, School Board Office, Bruce Apartments and several others

The results obtained, in all cases, have been highly satisfactory, in no case have our savings shown under 20%, several of them between 25 and 30%, while at least four show as high as 40% reduction in fuel costs with less labour and higher efficiency.

We supply special non-sifting grates of the shaker type yet flexible, and allowing 40% air circulation, also forced draft equipment supplied by motor with fan attached and entered through the side of the ashpit wall under the grates and equipped with mercury steam pressure controls, so that the Engineer can regulate same as desired, for instance, if he desires three pound steam pressure he can set his control to cut off and set same to cut in again at any point under three pounds, making a narrow or wide range as desired.

Lignite coal burns with the long flame so that if the boilers have not been installed we would appreciate if possible a higher setting which can easily be arranged with the manufacturer. In the Davin Public School, Regina, we have a special setting with the boiler five feet off the grates and this sixteen room school was heated during our coldest January, 1930, at an average of $6.21 per day (and the system includes air-washers and vacuum ventilators) being a record for Western Canada in fuel costs and efficiency.

The Separate School Board advises me that our equipment in St. Augustine School has resulted in a saving of 40% reduction in costs with less labour.

Indian Affairs. (RG 10, Volume 6310, file 654-5, part 4)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

Library and Archives Canada / Bibliothèque et Archives Canada
www.collectionscanada.gc.ca

If the higher set boiler can be arranged we would recommend at least thirty-six inches from grates to boiler, will assure us of good combustion, as the old theory of setting the boiler close to the grates has ~~exploded~~ been exploded.

Furthermore, when a plant is equipped for burning Lignite coal it will burn any grade of coal with much higher efficiency, while on the other hand a plant set up in the regular way will not burn Sask. Lignite satisfactorily.

The Hulson grate is an American grate built in Keokuk, Iowa, and sells at approximately $21.50 per square foot.

The Pyramid Grate is built by the Riley Engineering Company of Toronto and sells at approximately $17.50 per square foot. The blower and controls sell according to the square foot of grate area.

It is usually arranged with manafacturer when installing our equipment to have the boilers shipped less the grates, thereby saving cost of the regular grate.

If there is any further information which you require will be pleased to give same at your convenience.

Thanking you, we are,

Yours very truly,

LIGNITE EQUIPMENT LIMITED

Dear Mr. Scott:-

I am enclosing herewith copy of a letter that I received from the Manager of the Lignite Equipment, Limited, of this City.

I may say that Mr. Erskine called on me with a view of discussing the matter of using Saskatchewan coal in our institutions. I made it clear to him, however, that this was a matter to be dealt with by the Department, and told him that if he would write me a letter on the subject I would bring it to your attention.

This Province is about to take over its Natural Resources, and a big campaign is on to make use of these resources, so I thought it just as well that I bring this matter to your attention.

Yours very truly,

W. M. Graham,

Dear Sir;

Re.Gordons School Punnichy. Report No.7.

Since March 31st.we have had very good weather and good progress has been made with the brickwork.In another week's time most of the sixteen bricklayers will be away.
The only concrete that has been run up to the present is the roof over the laundry and generator room,but we now intend to work on this with a large gang,and with the nights getting free of frost there is now no danger of having concrete frozen.
I enclose four photographs showing the state of the building on April 9th.

The Principal,Rev.Stanford,has asked me to say that he wants to build a trench silo for use at the school,and would like to have the concrete walls put in by the contractors;can he have your authority to do this as an extra?
He also stated,when I discussed the placing of the laundry machinery with him,that they needed a rinsing tank between the washer and the extractor.He states that a galvanised iron one costing about fifteen dollars would do,and is asking that this be included.
I might mention that I have taken up the matter of running the laundry machinery with the Canadian Laundry Machinery Co.and R.A.Lister Co.and have decided to run the machinery from a line shaft driven by an electric motar from the electric plant. The total power required if all machines are running is 2½ H.P. and the Lister people state that their plant will take care of a 5 H.P.

Yours obedient servant,

W. Swan.
Inspector of Construction.

P.S.
The trench silo will be 100'.0"x 16'.0" x 10'.0".

Dear Sir;

Re.Gordon's School Punnichy,Sask. Report No.8.

During the last two weeks good building weather has continued and good progress has been made.
All concrete roof slabs have been run and also part of the second floor.The plumbers and steam fitters are now at work,and the electrician has been on the job for a week.Basement partitions have been built up,and the bricklayers have been at work on the glazed brick lining of the Kitchen and Pantry for two days.
Of the outside brickwork only the two chimneys remain to be completed (see enclosed photos).
The Rev.Principal states that it will be necessary to have double doors between the boys entrance and the dining room so that children using the recreation rooms will not be able to run into the dining room.I have arranged to have this done and in view of the saving in doors on our new ground floor layout there will be no extra on this.

I enclose herewith five photographs showing building on April 24th.,two days ago.Of course no cleaning down has yet been done.

Your obedient servant,

W. Swan

Inspector of Construction.

MAY 2, 1930.

Sir,-

Replying to your letter of the 12th ultimo with reference to the Gordon's School at Punnichy, I beg to say that there are no funds available to build a trench silo and I would ask you to please advise the Reverend Principal.

With reference to the rinsing tank it is not customary to install these tanks. In fact I do not know of any school that is equipped with such a tank.

I beg to refer to your letter of the 15th of March, in which you enclosed accounts for materials for the ice house. I am returning the accounts herewith and would ask you to please certify as to their correctness and return them to the Department when payment will be made.

I have received your letter of the 26th ultimo and note that good progress is being made. Many thanks for the photographs enclosed with your letter and which have been received from time to time. These are very interesting and show clearly the progress of the work.

Your obedient servant,

A. F. MacKenzie.

May 13, 1929.

Sir,-

If funds are provided by Parliament it is the intention to proceed with the rebuilding of the Gordon's School. I am sending you herewith copies of the floor plans of the school as it appeared before the fire, and would ask you to kindly interview the Church authorities and return the blue prints to me with any changes you desire in the layout.

I may say that it is the intention to erect the building on the old foundation, and any changes contemplated should not interfere with the outside walls.

The new building will be built of semi-fireproof construction with a flat roof.

Your obedient servant,

J. D. McLean.
Assistant Deputy and Secretary.

Dear Sir;

Re.Gordons School,Punnichy,Sask. Report No.9.

Since April 26th there has been a good showing made on the interior work at the school.Most of the partitions are now up and practically all the strapping of exterior walls is in place.The back plastering is on in most of the rooms,and the plasterers are at work on walls and ceilings in the basement of the north wing.The plumbing is all roughed in and I will have a water test on the stacks on Monday.The steam lines have all been run and ceilings are being lathed.
All concrete is finished with the exception of the roof slab over the chapel and the basement floors.
We are now excavating for the tile drain from Laundry and rainwater tank overflow which will connect up beyond the septic tank.
Today the roofers started on the tar and gravel roof,and with a week of good weather the building will have a tight roof on.
We have found good clean sand on the reserve which is first rate for plastering,and the contractors have arranged with the indians to supply all of this.
In going over the matter of cupboards the Principal has pointed out that none have been arranged for in the upper dormitories,and he thinks that these are very necessary.
Will you please let me have your opinion on these at an early date?

Your obedient servant,

W. Swan

Dear Sirs-
Re.Gordons Indian Residential School.

In going over the specifications with the painter he claims that he did not figure on any painting for the concrete floors. I feel sure that it is your intention to have these painted, say a battleship grey, is it not?
He also advises that one coat of varnish on the linoleum is required to preserve the original colour and the surface. Are you of the opinion that this should be done?

Dear Sir;

Re.Gordons School,Punnichy,Sask. Report No.10.

Since my last report most of the first and second coats of plaster have been put on although none has been done in the Chapel.The fire escapes and steel stairs are being erected and these should be in within a few days.
Owing to several spells of rain and windy weather the roofer has not yet finished the tar and gravel roofs.Those of the north and south wings and the centre wing are finished,and a day or so with good weather will see these of the Chapel and Laundry finished.
The painters have started on the frames.
In placing the grounds for blackboards in the class rooms it has come to our attention that the blackboard area is not quite up to the amount required by the Dept.of Education of the province of Saskatchewan.Could we arrange for about sixteen feet of the walls opposite the windows to have boards?
I am arranging with the contractor to have an iron band and brace rod from the kitchen chimney to the chapel roof;this was put on the old chimney if you remember after we found that there was quite a sway to the chimney in a wind.
I have had the plasterers run a large quantity of lime for the putty coat so that there will be no danger of it going into the walls too new.
As the building is shaping up now I think it should be substantially finished by the first of July.

I have not yet had your authority to place cupboards in the upper dormitories.

Your obedient servant,

W. Swan

Inspector of Construction.

Ottawa, June 2, 1930.

Sir,-

I have your letter of the 24th ~~ultimo~~, with reference to the progress of the work on the new Gordon's School at Punnichy.

You may arrange to have the additional black boards installed as requested.

With reference to the painting of the concrete floors this is not provided for in the specifications, but I would ask you to kindly obtain from the contractor and submit a price for the painting of these floors with a suitable paint of battleship grey. It will not be necessary to varnish the linoleum. Also kindly obtain and submit a price for the installation of the additional cupboards asked for in the upper dormitories.

Your obedient servant,

A. F. MacKenzie.

FIRE POLICY CONTAINS A CO-INSURANCE CLAUSE

FIRE POLICY

No. F 3306724

The London & Lancashire

GUARANTEE & ACCIDENT

COMPANY OF CANADA

THIS POLICY CONTAINS A CO-INSURANCE CLAUSE

Replacing #3306721, Cancelled.

HEAD OFFICE, TORONTO

Term: Three Months — Sum Insured, $50,000.00

From April 17th, 1930. at noon — Premium $ 37.50

To July 17th, 1930. at noon — Rate $ 2½ per month.

Whereas---Fred Shoquist and John Shoquist, of the City of Saskatoon, Sask.---
(hereinafter called the Insured), having paid to THE LONDON & LANCASHIRE GUARANTEE & ACCIDENT COMPANY OF CANADA (hereinafter called the "Company"), the amount of Premium above stated, the Company, in consideration of the material representations, covenants and warranties of the Insured, and of the said Premium, hereby insures the said Insured against direct loss or damage by fire (the amount of such loss or damage to be estimated according to the actual cash value of the property at the time of the loss or damage) if such loss or damage occurs between the times above stated, to an amount not exceeding the sums set opposite the several items below, and not exceeding in the whole the sum above stated as the sum insured, in respect of the property hereinafter described, namely:

ATTACHED TO AND FORMING PART OF THIS POLICY.

ATTACHED TO AND FORMING PART OF THIS POLICY.

THIS POLICY CONTAINS A CO-INSURANCE CLAUSE

(For General Use, When Not Otherwise Provided For)

FRED SHOQUIST AND JOHN SHOQUIST.

$50,000.00 ON the building in course of construction, to be built of steel, concrete and tile and roofed with composition on concrete, and its additions of similiar construction adjoining and in contact therewith, landlord's permanent fittings, fixtures, including frescoes and plate glass, and materials to be used in the construction of said building while therein, to be occupied when completed as Indian Boarding School and situate and being on The Gordon's Indian Reserve (near Punnichy), in the Province of Saskatchewan.

80% CO-INSURANCE CLAUSE.

EIGHTY PER CENT. CO-INSURANCE CLAUSE.

It is part of the consideration of this policy and the basis upon which the rate of premium is fixed, that the assured shall maintain insurance concurrent in form with this policy on each and every item of the property hereby insured, to the extent of at least EIGHTY per cent of the actual cash value thereof, and that failing to do so, the insured shall be a co-insurer to the extent of an amount sufficient to make the aggregate insurance equal to EIGHTY per cent. of the actual cash value of each and every item of the property hereby insured and in that capacity shall bear his, her or their proportion of any loss that may occur.

CO-INSURANCE WAIVER.

In case of loss, the Co-Insurance Clause shall not be held to apply when the loss does not exceed two(2) per cent of the amount of Insurance covering on the involved item or items of this schedule, but in no case shall this exemption apply when the total exceeds Twenty Five Hundred Dollars.

FOUNDATION CLAUSE.

It is understood and agreed that this insurance does not cover loss by fire to buried piping or basement floors, or the foundations of the building below the level of the ground, nor is the value of the buried piping, basement floors, or the stone brick or cement foundations, nor the cost of excavating same, nor Architects' fees in connection therewith, to be included in calculating the value of the property with relation to, or for the purpose of the CO-Insurance clause.

PERMISSION GRANTED to use and to keep on hand all materials and to do such work as may be necessary; to work overtime and at night.

Insurance map reference: Vol. Sheet Block No.

Loss, if any, on buildings only, payable to The Deputy Superintendent General, Department of Indian Affairs, and Secondly to Fred Shoquist and John Shoquist.

subject nevertheless to all the terms and conditions of this Insurance.

[redacted]

Permission granted for workmen to be employed to make ordinary alterations and repairs not to exceed fifteen (15) days at any one time; but it is understood and agreed that extraordinary alterations, repairs or additions are prohibited without notice to and consent of this Company in writing.

...NG AND ELECTRICAL CURRENT CLAUSE:—(See Statutory Conditions).

Regina Sask.,

April 29th.1930

Lignite Equipment Limited,

1711 Scarth St.,

Regina, Sask.

"Attention Mr. Erskine."

Gentlemen:

The following figures will be of interest to you on account of your Firm having installed the new equipment in our boilers last fall which enabled us to burn Sask.Lignite coal.

Our total fuel cost from Sept.7th, 1928 to April 30th,1929 was $5297.20, while the total cost for the same period in the following year amounted to $3718.00 thereby effecting a saving of a total of $1579.20, or a daily saving of $5.72, which in reality amounts to 30%. In other words, in addition to paying for our equipment installed by your Firm, the amount of which was $990.00 we saved $589.20, or a total of 6.4%.

These figures are very gratifying to the Writer as they prove conclusively that we can not only burn Sask, lignite caal economically, but at the same time amintain the highest degree of efficiency, in the operation of our heating plant.

These figures should no$ only be of interest to your Firm, but to all residents of our Province who are purchasing other than lignite coal mined in Saskatchewan.

We might add that the two heating boilers are #312 Keewanee type and the high pressure boiler is a #409 Pascol build.

Very truly yours,

HOTEL CHAMPLAIN,

(Signed) W.W.Champ.

Regina, Sask.
May 6th. 1930

Mr.J.A.Erskine,
Lignite Equipment Limited,
1711 Scarth,St.
Regina, Sask.

Dear Mr. Erskine:-

It affords me great pleasure in testifying regarding the efficiency of your Equipment for burning Lignite Coal. I have just made a check up on our cost figures and the following results testify better than I can as to really how efficient your system is.

The School Board is convinced of the wisdom in using the Forced Draft System in burning lignite together with your Coal Gas Burner. The System was first installed in the Haultain School and there we have had it in uselong enough tto make a comparison. From July 1927 to June 30th.1928 .Haultain School cost us $1706.60. whereas, the next year, after we had installed the Lignite Equipment, the cost was reduced to $1027.81. Our new Davin School, which went into operation last Septmmber cost us from Se tember 1st, 1929 to A pril 1st, 1930, only $768.37, whereas, the Strathcona School, which is a slightly smaller shcool, but, which, is operating without the Equipment, cost us $1056.46 for the same period, and the Thomson School, which has an Oil Burning Equipment, ran up to approximately $2125.13.

Last year we converted the Kitchener School, consisting of twenty rooms, to the System and also installed in in our new Administrative Building.

This year we are building a large 20 roomed School on the North Sideand a large addition to the Lakeview School. We are putting in new equipment in the Lakeview School for the entire building. Both these large building will have installed your Lignite Burning Equipment including the Forced Draft. Special Grates and Coal GAs Burners. We are also changing ofer the Albert Street School from Oil to Lignite Equipment this year That will give us a total of siz Schools and our office building equipped in the same manner.

We are delighted with the results, as shown above, and feel that it isonly fair to the Ratepayers of the Ciaty of Regina that the School Board should take every advantage to save money for them.

Yours very tuly,

(Signed) E.O. Walker.

Mr. F. Stanford,Principal,
Punnichy,Sask.

Gordon Indian School.

Dear Sir:-

Regret very much that it has been impossible for the writer to call on you before now with reference to your school, but might say that we have received boiler specifications from the Heating Firm and the cost of our equipment installed in Inglis Supreme boiler No. 16 will be:-

Non-sifting grates	$259.00
Blower and steam pressure control	335.00
Installation	35.00
	$629.00

Supervision would be $15.00 per day and expenses.

It will,of course, be necessary to have electric wiring and 24 hour service,which of course you no doubt have .

There is no doubt in the world but what we could make you a very substantial saving and we are enclosing herewith a copy of a letter from the Champlain Hotel as to results obtained by them during the past season.

Mr. Graham, Indian Agent, advises us that if the Principal approves of the system the Government will not hesitate to have same installed,and we are quite satisfied that you would get your money back in a short time.

We trust you will give the matter your early consideration and let us have your recommendations.

Thanking you,we are

Re: Heating Plant in New Building.

Dear Sir:-

We thank you for your favour of the 24th inst. advising us that the grate area of the Keewanee type boilers is approximately 20 square feet each and are pleased to quote you on our special equipment for the burning of Lignite coal ,as follows:-

Non-sifting grates	$790.00
Forced Draft Equipment	$650.00
Installation	$150.00
	$ 1590.00

Supervision $15.00 per day and expenses,(approximately three days.)

We are enclosing herewith a letter received from Regina Public School Board,which gives some idea of the reduction in fuel costs obtained by the use of our equipment and Lignite coal.

W e trust that you will refer this matter to the Indian Commissioner with your recommendations and we are quite sure that they will give same their favourable attention.

Thanking you,we are

RECORDS

Mr. Duncan C. Scott,
Deputy Supt. General Indian Affairs,
Ottawa, Ont.

Dear Sir:-

In reply to your favor of the 2nd inst. re Lignite Burning Equipment for Brandon, Punnichy and Lestock, might say that although the buildings are complete, our material can be installed, as we are doing in all other buildings in the Province. We supply new grates, Forced Draft Equipment and Steam P ressure Control, and we are enclosing herewith copy of letters from the Champlain Hotel and Public School boards, which speak for themselves.

The boilers installed in Punnichy and Brandon schools are very adaptable to the burning of Lignite coal, and while the investments in these cases are not very much, we have no hesitation in guaranteeing return of same in savings within a period of three years.

We will also enclose letters to the Principals of the two schools, where we gave them quotations of the expenditures required.

We trust this matter will have your favorable consideration, and will await your early reply.

Yours truly,

Dear Sir;

Re.Gordons School,Punnichy,Sask. Report No.11.

The stairs and fire escapes have been up a week,and the concrete landings have been run.
The plasterers have all upper stories finished with the exception of the cement base,and finish coat on the Chapel.
The cement floors on the two upper stories have been run and are at present being kept thoroughly wet.
The roofing is all complete including ventilators and skylight.
The outside walls are now being cleaned down with hydrochloric acid and are showing up well.
We now have the pressure tanks in place,and the filtration plant is being overhauled.
There are two painters on the job,and I am having all trim oiled on the back before placing.
The Rev.Principal has called to my attention that a bell is needed for the belfry as there is none specified,and the one they make use of now is badly damaged;cracked in the fire I believe.
I have not yet been able to obtain a price from the contractors for the extra cupboards and painting of concrete floors,but expect this along within the next day or so.

Dear Mr.Orr;

Re.Gordons School.

The Rev.Principal has asked me if there could be some heavy screens provided for the inside of playroom windows so that the glass would be protected in case of ball games being played there?
He gave me a copy of his list of furniture sent to you,and I notice quite a lot of shelves etc.asked for.Do you think that this should be put up before the contractors leave the job?

Yours sincerely,

W. Swan

Dear Mr.Orr;

Re.Gordon School.

As this job progresses I become convinced that ~~that~~ Shoquist Bros.,are not very satisfactory as regards their methods of financing. Once or twice I have delayed their certificates on account of complaints from some of their supply people. Alex Young Ltd.of Regina who supplied the cut stone were not at all satisfied with the payments they were getting,and threatened to put a lien on the building.Of course I immediately got in touch with Shouists and asked for instant settlement, and then wrote the other firms supplying material;stating the amounts I had certified to as far as they were concerned and asking if they were satisfied with their payments.This brought forth an indignant letter from Shoquists as they stated that the Department had held them up,but after I had pointed out otherwise they were more or less apologetic,and promised that things would be looked after better.Yesterday I get a wire from the North American Lumber & Supply Co.of Winnipeg,stating that they can get no satisfaction by mail or wire from Shoquists,and for me to protect their interest to the extent of $6000.00. Before I issue another certificate I shall ask the contractors to supply me with a letter from the various subcontractors and supply houses stating that each is satisfied with their payments to date.
I intend to keep this matter checked up,but thought you might like to know this more or less confidentially,as I personally feel that they are a little out of their depth in running a job of this size. Should they be low on the Muskowequan I believe that the Department would do well to make a careful check-up before awarding the contract.As far as Gordons is concerned they have a pretty fair foreman on the job and I am keeping them checked up.

This is written to you personally unless you wish to impart the information to the Deputy Minister.

Yours sincerely,

W. Swan

COMMISSIONER'S OFFICE.
D REGINA, SASK., June 4th, 1930

Sir:-

I have yours of the 17th. instant in connection with an implement shed and henhouse for the Gordon Indian Residential School.

I may inform you that both these buildings will be necessary and should be arranged for at an early date.

It is my intention to visit the Gordon School in the near future, and I may be able to have the buildings put up by local men.

Your obedient servant,

W. M. Graham,
Indian Commissioner.

Sir:

I have your 312-11A C.E. of the 4th instant, relative to the providing of an implement shed and hen house for the Gordon's Indian Residential School.

In reply I have to say that you may arrange for the erection of an implement shed and hen house during the present summer. These should be of the dimensions and type which you consider satisfactory for the purpose. The Department will expect you to see that all expense in connection with the erection of these buildings is kept as low as possible. In this connection please be guided by general instructions in official letter No. 1-1-5 of the 14th ultimo and the 6th of May, 1929.

Your obedient servant,

A. F. MacKenzie,
Acting Asst. Deputy and Secretary.

Dear Sir;

Re.Gordons School,Punnichy Sask. Report No.12.

The building is fast approaching completion,although yesterday some of the carpenters had to be laid off owing to non arrival of the doors.These however are promised for Tuesday morning nextand from then on all should be moving smoothly.The plasterers have the finish coat on all walls except the Chapel walls;and are now at work on the cement base. All of the cement floors except part of the basement have been run and the terrazo floors are being put down in the lavatories.
There are still men at work on cleaning down the brick-work;this being rather a long job as I am insisting on it all being scrubbed.
I have had to reject the hinges for all doors as they shipped plain hinges instead of ball bearing as specified; the only excuse being that Ashdown's stated that they had supplied hardware for several Indian schools and knew just what was wanted.
The lighting plant is now on the job and Lister's men are putting it in place.
The electrician is on the job pulling the wires;and the fixtures have all been selected by the Rev.Principal and myself.
Yesterday I received a price of 42¢ per sq.yard for painting two coats on the concrete floors;and a price of $632.50 for four sections of dormitory cupboards 11'.6" long.This latter I consider most exorbitant and shall get another figure.

J.D.McLean Esq.,
Assistant Deputy & Secretary,
Department of Indian Affairs,
Ottawa.

Dear Sir;

Re.Gordon's School,Punnichy,Sask. Report No.13.

Since June 21st.only fair progress has been made;there being delay in shipping the doors from the mill,and delay on getting the machine for rubbing down the terazzo floors.
At present things are going along very well;most of the windows have been hung,also many of the doors.The plasterers are through except for the laundry ceiling,which we are holding up on account of machinery shafting brackets etc., and the usual patching up after other trades.
The laundry machinery is all in place but not connected up.
The electrical plant has been installed and light on in some of the rooms.Yesterday the heating system was steamed up,and for the next three days it will be checked over with steam on.The pump and motor for the water system is not yet on the job;at present we are using a small one for supplying water on the job.The pressure tanks and the filtration plant are all ready to connect up.Many of the plumbing fixtures are now installed,and the plumbers are working right along. May I suggest that the Department insist ~~that~~ upon a thoroughly competent engineer being placed in charge of all the machinery as soon as the building is ready to be handed over.My personal experience with Gordon's school in the past has been that the Church hire a cheap man who knows very little about such plants,with the consequent trouble and expense on the machinery.With the splendid layout that they have to start with it seems a pity that any Tom,Dick,or Harry should be allowed to gain experience by experimenting with it.
The exterior brickwork of building has now been cleaned down and cleaning up of materials around building is in progress.
The contractors delivered "Sterling" slate for the blackboards but I have refused to allow this to go in.
I have not yet received your acceptance of the price on the painting of concrete floors.

Your obedient servant,
W. Swan.
Inspector of Construction.

Sir:-

I have your telegram of today's date, informing me that William Swan, Inspector, has been asked to obtain and submit prices for the building of lockers, shelves, cupboards etc. at the Gordon School.

I am glad to know that this matter was not delegated to Mr. Stanford, who is absolutely incompetent. He has not the slightest idea of what is required, as he has had no experience and is not a business man, hence my telegram. When I heard that Mr. Stanford was making these inquiries I thought it well to ascertain if he had been instructed to do this. I shall advise the parties who took the matter up with me that Mr. Stanford had no authority to make purchases or inquiries regarding the furnishings of the school.

Your obedient servant,

W. M. Graham.
Indian Commissioner.

The Secretary,
Dept. of Indian Affairs,

DEPT. OF INDIAN AFFAIRS
JUL 26 1930
RECORDS

J.D.McLean Esq.,
Assistant Deputy & Secretary,
Department of Indian Affairs,
Ottawa.

Dear Sir;

Re.Gordons School,Punnichy,Sask. Report No.14.

The painters are now well along with this job,and the plasterers are through except for the few places where patching up is necessary.
There has been some delay over the linoleum but I am assured that it has been shipped through the Hudsons Bay Co.,and will be on the job any day now.
The water supply pump and engine is not yet satisfactory; an elecrtic one was tried but did not do the work.At present we have a temporary engine on the pump,but it is the intention to use an electric motor.
The ash hoist has not yet arrived on the job,but is on the way. The laundry machinery has not yet been connected up, as the pulleys are not on the job.
On receipt of your telegram the contractors were given instructions regarding the painting of concrete floors, and installing of cupboards in upper dormitories.
I have received a figure of $39160.00.for the fixtures required by the Rev.Principal,and enclose herewith list submitted by the contractors,and under separate cover blueprints showing items figured on.
This figure includes all painting,hardware et.,and the installing.

The contractors are now clearing up around the building, and shipping their equipment away,although I expect that they will have a few men at work in the building for two or three weeks yet.

Your obedient servant,

W. Swan

GORDON'S INDIAN RESIDENTIAL SCHOOL.

DUNNIGHY. SASKATCHEWAN.

DEPT. OF INDIAN AFFAIRS
JUN 24 1930
RECORDS

List of outside buildings required for the school.
Supplementary to the list of Furniture and Furnishings requested by Mr Gurney Orr.

1 Store house, large enough to contain 300 bags flour, 50 bags Rolled oats etc, 50 bags bran, shorts etc.
(We have never had and there is not in the new school, provision for storing flour etc in any quantity. If we can bu our flour etc in large quantities, i.e for six or twelve months, we can by more cheaply and economically)

~~1 or more G~~

1 or more Granaries for the storage of feed oats, barley etc for the stock, cattle, horses and pigs and poultry. We shall need room for at least 3000 bushels this year as we have seeded 60 ~~bushels~~ acres to oats, 20 to barley. At present we have no granaries and have to store our feed in an old shed left behing by the workmen when the school was first built.
The above buildings should be either of metal or metal lined as this country is infested by rats which gnaw their way into any ordinary lumber building.

1 Six ft fence to enclose the Girl's playground.

1 Trench silo, to hold 200 tons of ensilage for the cattle feed in the winter.

300 loads of Gravel to grade up around the new school when finished, to prevent mud from being brought into the school during wet weather.

Some screen windows to cover the whole window for the school. The present specifications call for half screens on all windows except the casements. This must have been an oversight as with both top and bottom sashes hung for opening, it will be impossible to ventilate properly i.e from the top, or if the windows are opened at the top, to keep flies etc out. IF all windows cannot be thus fixed, may we have some for dormitories and school rooms and play rooms.

Principal. Gordon School.

June 2nd. 1930.

Gentlemen,-

Your telegram to the Honourable J. C. Elliott, Minister of Public Works, has been referred to this Department for attention.

The Indian Residential Schools at Brandon and Punnichy have been completed and the boilers have been installed.

When the contract is being awarded for the new school on the Muscowequan reserve, we will take up with the contractors the question of the necessary change in the boilers to provide for lignite equipment.

Yours sincerely,

DCI

Hon. J.C. Elliott,
Minister of Public Works,
House of Commons,
Ottawa, Ont.

Dear Sir:-

We wired you this A.M. with reference to interview with the Hon. Minister in charge of Indian Affairs regarding the installation of Lignite Burning Equipment in their new residential schools under construction at Punnichy, Lestock and Brandon and trust that you have been able to spare a few moments.

The approximate cost of the installation for the Brandon building is $1590.00, while at Punnichy it is $629.00 plus supervision.

The tenders are now being called for the Lestock school and we have not been advised of the grate area of boilers, so, that we are not prepared to give estimate until we receive this information, but can assure their department, that our work is being done and supervised by outstanding Consulting Engineers and, unless, the boilers are suitable for our equipment, where we are satisfied the investment will be returned in savings within a period of three years, we do not recommend the installation.

We trust that you have received favourable report from your Mr. Hamel, heating engineer, regarding the Regina and Moose Jaw post-offices and will appreciate very much your early attention regarding same, as all grates have got to be made to order and takes us from 30 to 35 days to get delivery of these and as the period is short in this country, where boilers are not in use, we have to make hay while the sun shines.

Thanking you for an early reply, we are,

Yours very truly,

LIGNITE EQUIPMENT LIMITED,

JAE/mb.

Ottawa, July 24, 1930.

Sir:

I am enclosing, for your comment and recommendation, a list of outbuildings, etc., requested by the Rev. Principal of the Gordon's Indian Residential School. The Appropriation for Indian Education is completely assigned and only improvements that are really necessary can be allowed this year. You have already been authorized to erect a henhouse and an implement shed at this school and I would like to have your recommendation regarding the requests in the enclosure.

Encl.

Your obedient servant,

A. F. MacKenzie,

FIRE POLICY

No. F 3306738

The London & Lancashire

GUARANTEE & ACCIDENT

COMPANY OF CANADA

HEAD OFFICE, TORONTO

Term: One month

From July 17th, 1930 at noon

To August 17th, 1930 at noon

Sum Insured, $60,000.00

Premium $ 15.00

Rate 25¢ per month.

Whereas --FRED SHOQUIST AND JOHN SHOQUIST--

(hereinafter called the Insured), having paid to THE LONDON & LANCASHIRE GUARANTEE & ACCIDENT COMPANY OF CANADA (hereinafter called the "Company"), the amount of Premium above stated, the Company, in consideration of the material representations, covenants and warranties of the Insured, and of the said Premium, hereby insures the said Insured against direct loss or damage by fire (the amount of such loss or damage to be estimated according to the actual cash value of the property at the time of the loss or damage) if such loss or damage occurs between the times above stated, to an amount not exceeding the sums set opposite the several items below, and not exceeding in the whole the sum above stated as the sum insured, in respect of the property hereinafter described, namely:

ATTACHED TO AND FORMING PART OF THIS POLICY

CO-INSURANCE CLAUSES

ATTACHED TO AND FORMING PART OF THIS POLICY

(For General Use, When Not Otherwise Provided For)

FRED SHOQUIST AND JOHN SHOQUIST

$60,000.00 On the building in course of construction to be built of steel, concrete and tile and roofed with composition on concrete, and its additions of similar construction adjoining and in contact therewith, landlord's permanent fittings, fixtures, including frescoes and plate glass and materials to be used in the construction of said building while therein, to be occupied as Indian Boarding School and situate and being on the Gordon's Indian Reserve (near Punnichy) in the Province of Saskatchewan.

EIGHTY PER CENT CO/INSURANCE CLAUSE:

EIGHTY PER CENT. CO-INSURANCE CLAUSE.

It is part of the consideration of this policy and the basis upon which the rate of premium is fixed, that the assured shall maintain insurance concurrent in form with this policy on each and every item of the property hereby insured, to the extent of at least EIGHTY per cent of the actual cash value thereof, and that failing to do so, the insured shall be a co-insurer to the extent of an amount sufficient to make the aggregate insurance equal to EIGHTY per cent. of the actual cash value of each and every item of the property hereby insured and in that capacity shall bear his, her or their proportion of any loss that may occur.

CO/INSURANCE WAIVER:

In case of loss, the co-Insurance clause shall not be held to apply when the loss does not exceed two (2) per cent of the amount of Insurance covering on the involved item or items of this schedule, but in no case shall this exemption apply when the total exceeds Twenty five hundred dollars.

FOUNDATION CLAUSE:

It is understood and agreed that this Insurance does not cover loss by fire to buried piping or basement floors, or the foundations of the building below the level of the ground, nor is the value of the buried piping, basement floors, or the stone brick or cement foundations, nor the cost of excavating same, nor architects' fees in connection therewith, to be included in calculating the value of the property with relation to, or for the purpose of the Co-Insurance Clause.

PERMISSION GRANTED to use and to keep on hand all materials and to do such work as may be necessary; to work overtime and at night.

Insurance map reference: Vol. Sheet Block No.

Loss, if any, on buildings only, payable to The Deputy Superintendent General, Department of Indian Affairs, and secondly to Fred Shoquist and John Shoquist,

subject nevertheless to all the terms and conditions of this Insurance.

[redacted] of the actual cash value of the property insured.

Permission granted for workmen to be employed to make ordinary alterations and repairs not to exceed fifteen (15) days at any one time; but it is understood and agreed that extraordinary alterations, repairs or additions are prohibited without notice to and consent of this Company in writing.

LIGHTNING AND ELECTRICAL CURRENT CLAUSE:—(See Statutory Conditions).

.....

CONDITIONS AND STIPULATIONS ON WHICH THIS POLICY IS GRANTED.

ONTARIO, MANITOBA
SASKATCHEWAN, ALBERTA
BRITISH COLUMBIA

STATUTORY CONDITIONS

Misrepresentation 1. If any person applying for insurance falsely describes the property to the prejudice of the insurer, or misrepresents or fraudulently omits to communicate any circumstance which is material to be made known to the insurer in order to enable it to judge of the risk to be undertaken, the contract shall be void as to the property in respect of which the misrepresentation or omission is made.

Form of Contract 2. After application for insurance, if the same is in writing, it shall be deemed that any policy sent to the insured is intended to be in accordance with the terms of the application, unless the insurer points out in writing the particulars wherein it differs from the application, in which case the insured may, within two weeks from the receipt of the notification, reject the policy.

Property Not Insured 3. Unless otherwise specifically stated in the policy, money, books of account, securities for money, evidences of debt or title, and automobiles, tractors and other motor vehicles, are not insured.

Risks Not Covered 4. Unless otherwise specifically stated in the policy, the insurer is not liable for the losses following, that is to say:

(a) for loss of or damage to property owned by any person other than the insured, unless the interest of the insured therein is stated in the policy;

(b) for loss or damage caused by invasion, insurrection, riot, civil commotion, military or usurped power;

(c) for loss due to the want, within the knowledge of the insured, of good and substantial chimneys; or caused by ashes or embers being deposited, with the knowledge and consent of the insured, in wooden vessels, or by stoves or stove-pipes being, to the knowledge of the insured, in an unsafe condition or improperly secured; or

(d) for loss of or damage to goods while undergoing any process in or by which the application of fire heat is necessary.

Risks Not Covered Except By Special Permission 5. Unless permission is given by the policy or endorsed thereon, the insurer shall not be liable for loss or damage occurring:

Repairs (a) to buildings or their contents during alteration or repair of the buildings and in consequence thereof; fifteen days being allowed in each year for incidental alterations or repairs without such permission;

Inflammable Substances (b) while illuminating gas or vapour is generated by the insured, or to his knowledge, in the building insured or which contains the property insured, or while there is stored or kept therein by the insured, or to his knowledge, by any person under his control, petroleum, or any liquid product thereof, coal oil, camphene, gasoline, burning fluid, benzine, naphtha, or any of their constituent parts (refined oil for lighting, heating or cooking purposes only, not exceeding five gallons in quantity, gasoline, if contained in a tightly closed metallic can free from leaks and not exceeding one quart in quantity, or lubricating oil not being crude petroleum nor oil of less specific gravity than is required by law for illuminating purposes, not exceeding five gallons in quantity, excepted), or more than twenty-five pounds weight of gunpowder, dynamite or similar explosives;

Change of Interest (c) after the interest of the insured in the subject-matter of the insurance is assigned, but this condition is not to apply to an authorized assignment under *The Bankruptcy Act* or to change of title by succession, by operation of law, or by death;

Vacancy (d) when the building insured or containing the property insured is, to the knowledge of the insured, vacant or unoccupied for more than thirty consecutive days, or being a manufacturing establishment, ceases to be operated and continues out of operation for more than thirty consecutive days.

Explosion and Lightning 6. The insurer will make good loss or damage caused by lightning or by the explosion of coal or natural gas in a building not forming part of gas works, whether fire ensues therefrom or not; and loss or damage by fire caused by any other explosion; but, if electrical appliances or devices are insured, any loss or damage to them caused by lightning or other electrical currents is excluded and the insurer shall be liable only for such loss or damage to them as may occur from fire originating outside the article itself.

Material Change 7. Any change material to the risk and within the control and knowledge of the insured shall avoid the policy as to the part affected thereby, unless the change is promptly notified in writing to the insurer or its local agent; and the insurer when so notified may return the unearned portion, if any, of the premium paid and cancel the policy, or may notify the insured in writing that, if he desires the policy to continue in force, he must within fifteen days of the receipt of the notice pay to the insurer an additional premium, and in default of such payment the policy shall no longer be in force and the insurer shall return the unearned portion, if any, of the premium paid.

Other Insurance 8. (a) If the insured has at the date of this policy any other insurance on property covered thereby which is not disclosed to the insurer, or hereafter effects any other insurance thereon without the written assent of the insurer, he shall not be entitled to recover more than sixty per cent. of the loss in respect of such property; but if for any fraudulent purpose the insured does not disclose such other insurance, this policy shall be void.

(b) The insurer shall be deemed to have assented to such other insurance unless it dissents by notice in writing within two weeks after notice thereof.

(c) In the event of there being any other insurance on property herein described at the time of the happening of a loss in respect thereof, the insurer shall be liable only for payment of a rateable proportion of the loss or a rateable proportion of such amounts as the insured shall be entitled to recover under clause (a) of this condition.

Mortgagees and Other Payees 9. Where the loss, if any, under a policy has, with the consent of the insurer, been made payable to some person other than the insured, the policy shall not be cancelled or altered by the insurer to the prejudice of such person without reasonable notice to him.

Termination of Insurance 10. (1) The insurance may be terminated:

(a) subject to the provisions of condition 9, by the insurer giving to the insured at any time fifteen days' notice of cancellation by registered mail, or five days' notice of cancellation personally delivered, and, if the insurance is on the cash plan, refunding the excess of premium actually paid by the insured beyond the *pro rata* premium for the expired time;

(b) if on the cash plan, by the insured giving written notice of termination to the insurer, in which case the insurer shall, upon surrender of this policy, refund the excess of premium actually paid by the insured beyond the customary short rate for the expired time.

(2) Repayment of the excess premium may be made by money, post office order or postal note or by cheque payable at par and certified by a chartered bank doing business in the Province. If the notice is given by registered letter, such repayment shall accompany the notice, and in such case the fifteen days mentioned in clause (a) of this condition shall commence to run from the day following the receipt of the registered letter at the post office to which it is addressed.

Salvage 11. After any loss or damage to insured property, it shall be the duty of the insured, when and as soon as practicable, to secure the insured property from further damage, and to separate as far as reasonably may be the damaged from the undamaged property, and to notify the insurer of the separation.

Insurance on Goods Moved 12. If any of the insured property is necessarily removed to prevent damage or further damage thereto, that part of the insurance under this policy which exceeds the amount of the insurer's liability for any loss already incurred shall for seven days only, or for the unexpired term if less than seven days, cover the property removed and any property remaining in the original location in the proportions which the value of the property in the respective locations bears to the value of the property in them all; and the insurer will contribute *pro rata* towards any loss or expense connected with such act of salvage, according to the respective interests of the parties.

Entry, Control, Abandonment 13. After any loss or damage to insured property, the insurer shall have an immediate right of access and entry by accredited agents sufficient to enable them to survey and examine the property, and to make an estimate of the loss or damage, and, after the insured has secured the property, a further right of access and entry sufficient to enable them to make appraisement or particular estimate of the loss or damage, but the insurer shall not be entitled to the control or possession of the insured property, or the remains or salvage thereof, unless it accepts a part thereof at its agreed value or its value as ascertained according to condition 17 or undertakes replacement under condition 19, and without the consent of the insurer there can be no abandonment to it of insured property.

Who To Make Proof of Loss 14. Proof of loss must be made by the insured, although the loss is payable to a third person, except that, in case of the absence of the insured or his inability to make the same, proof may be made by his agent, such absence or inability being satisfactorily accounted for, or in the like case or if the insured refuse to do so, by a person to whom any part of the insurance money is payable.

Requirements After Loss 15. Any person entitled to claim under this policy shall:

(a) forthwith after loss give notice in writing to the insurer;

(b) deliver, as soon thereafter as practicable, a particular account of the loss;

(c) furnish therewith a statutory declaration declaring:

(i) that the account is just and true;

(ii) when and how the loss occurred, and if caused by fire, how the fire originated, so far as the declarant knows or believes;

(iii) that the loss did not occur through any wilful act or neglect or the procurement, means or connivance of the insured;

(iv) the amount of other insurances and names of other insurers;

(v) all liens and encumbrances on the property insured;

(vi) the place where the property insured, if moveable, was deposited at the time of the fire;

(d) if required and if practicable, produce books of account, warehouse receipts and stock lists, and furnish invoices and other vouchers verified by statutory declaration, and furnish a copy of the written portion of any other policy. The evidence furnished under this clause shall not be considered proofs of loss within the meaning of conditions 18 and 19.

Fraud 16. Any fraud or wilfully false statement in a statutory declaration, in relation to any of the above particulars, shall vitiate the claim of the person making the declaration.

Arbitration 17. If any difference arises as to the value of the property insured, the property saved, or the amount of the loss, such value and amount and the proportion thereof, if any, to be paid by the insurer shall, whether the right to recover on the policy is disputed or not, and independently of all other questions, be submitted to the arbitration of some person to be chosen by both parties, or if they cannot agree on one person, then to two persons, one to be chosen by the insured and the other by the insurer, and a third to be appointed by the persons so chosen, or on their failing to agree, then by a Judge of the County or District Court of the County or District in which the loss has happened; and such reference shall be subject to the provisions of *The Arbitration Act*; and the award shall, if the insurer is in other respects liable, be conclusive as to the amount of the loss and the proportion to be paid by the insurer; where the full amount of the claim is awarded the cost shall follow the event; and in other cases all questions of costs shall be in the discretion of the arbitrators.

When Loss Payable 18. The loss shall be payable within sixty days after completion of the proofs of loss, unless the contract provides for a shorter period.

Replacement 19. The insurer, instead of making payment, may repair, rebuild or replace the property damaged or lost, giving written notice of its intention so to do within fifteen days after receipt of the proofs of loss. In such event the insurer shall commence to so repair, rebuild or replace the property within thirty days after receipt of the proofs of loss and shall thereafter proceed with all due diligence to the completion thereof.

Action 20. Every action or proceeding against the insurer for the recovery of any claim under or by virtue of this policy shall be absolutely barred unless commenced within one year next after the loss or damage occurs.

Agency 21. Any officer or agent of the insurer who assumes on behalf of the insurer to enter into a written agreement relating to any matter connected with the insurance shall be deemed *prima facie* to be the agent of the insurer for the purpose.

Waiver of Condition 22. No condition of this policy shall be deemed to have been waived by the insurer, either in whole or in part, unless the waiver is clearly expressed in writing signed by an agent of the insurer.

Notice 23. Any written notice to the insurer may be delivered at or sent by registered post to the chief agency or head office of the insurer in the Province or delivered or so sent to any authorized agent of the insurer therein. Written notice may be given to the insured by letter personally delivered to him or by registered letter addressed to him at his last post office address notified to the insurer, or, where no address is notified and the address is not known, addressed to him at the post office of the agency, if any, from which the application was received.

Subrogation 24. The insurer may require from the insured an assignment of all right of recovery against any other party for loss or damage to the extent that payment therefor is made by the insurer.

Duncan C. Scott,
Deputy Superintendent General,
Dept. of Indian Affairs,
Ottawa, Ont.

Dear Sir:-

We have been in communication with your Department several times with reference to equipping your new buildings on the Prairie Provinces for the burning of Lignite coal, but, apparently we are unable to get any action on this matter.

We are equipping practically all the new buildings under construction in the West with suitable burning equipment for Lignite coal and are pleased to say that the results being obtained in economy and efficiency warrant the investment. The Provincial Government are undertaking to equip all Public buildings for the burning of Lignite coal and we feel, that, if the facts, were before your Department we should receive some of the business.

We wrote you in connection with the Punnichy, Lestock, Brandon and Birtle Indian Residential Schools, but, so far, have been unable to make any progress.

We might just mention that in connection with the above Schools, although completed, all that is necessary on our part is to remove the grates and install our own, also the forced draft and pressure controls. This does not deface the boiler in any way, nor does it limit you to any coal, in fact, with our equipment completely installed more economy and efficiency can be obtained with any grade of coal than under the old system, while with the old method Lignite coal can not be burnt properly.

With reference to tenders being called for Public building at Arcola and Kamsack wish you would give the matter of having our equipment installed, your attention.

Thanking you for your early reply, we are,

Yours very truly,

SCHOOLS BRANCH
AUG 5 1930

Sir:-

I beg to acknowledge receipt of your letter of the 24th. instant No. 121-1-5, enclosing for my comment and recommendation a list of outbuildings, etc., requested by the Rev. Principal of the Gordon's Indian Residential School, and reply to say that it has always been my idea that we should have a suitable granary at this institution for the storing of seed and feed. We should also have a fence around the playground, but I would not, under any circumstances, allow Mr. Stanford to have anything to do with this. He is not qualified, and is absolutely incompetent. He has had no experience in schools, and his advice on matters of this kind should not be accepted.

I notice also that he proposes having gravel put on top of the clay around the school. This would be a nice mess, and would tear the floors and linoleum all up in a short time. This is a matter that can be left until we have a Principal at this school who understands something about business.

-I note-

The Secretary,

Ottawa.

Will refer when new Principal arrives

I note that Mr. Stanford has submitted a list of furnishings for this school. I am surprised to know that his recommendation has been acted upon, while at the same time the Department advises me to take up with the church authorities the matter of dispensing with his services. I should think he would be somewhat confused when the times comes for him to be advised that his services are no longer required.

Should not matters of this kind come through this office, to be passed on to the Department.

W. M. Graham,
Indian Commissioner.

INDIAN AFFAIRS BRANCH

PLEASE QUOTE
FILE 6- 11 An.

PUNNICHY, Sask,
June 20, 1947.

J.P.B.Ostrander Esq., Inspector of Indian Agencies, Regina, Sask.

With reference to your letter #909-312-11 ACE dated June 14, 1947 enclosing report of the Fire Inspector on the Gordon Indian Residential School, the following steps have been taken to comply with the Fire Inspector's report.

1. A fire hose has been placed, with nozzles, in the boiler room and a new fire hose has been installed where the old hose were in bad shape.

I am enclosing a requisition for material to comply with his recommendations, as requested.

This school at the present time have all exit doors equipped so as when they open an electric bell rings and has one sounding control box on the main floor, but it will be necessary to change this wiring and connect it with the existing fire alarm bells and system.

I am also enclosing a requisition for 24 Pyerene fire extinguishers and refills. As you are aware at times we have had lots of trouble with water here, and in my opinion this extra precaution should be taken.

R.S.Davis,
Indian Agent.

File #1046-312-11 ACE.

Regina, July 9th, 1947.

Indian Affairs Branch, Department of Mines & Resources, OTTAWA.

I am enclosing requisitions for material necessary to make alterations at the Gordon's Indian Residential School so that they will comply with the Provincial Fire regulations.

Mr. Davis has sent a covering letter and he tells me that the electrical fixtures necessary can be purchased locally if authority is given and the work could be done during the summer holidays.

(Your: 1046-312-11 ACE)

W.T. 1-1

Ottawa, July 14th, 1947.

Mr. J.P.B. Ostrander, Inspector of
Indian Agencies, Regina, Sask.

With reference to your letter of the 9th instant enclosing communication from Indian Agent Davis, we feel that the number of fire extinguishers requested for the Gordon's School is excessive.

We are supplying twelve, one quart extinguishers and seven, two and one half gallon extinguishers.

You may authorize the Agent to purchase the following items from H. Brown, Punnichy;.

6 only Exit electric lights complete with fixtures
2 lbs. wire for electric system 150 ft. to the lb.
4 boxes insulated staples
1 only D.C. transformer to reduce current to 6 volts
2 only fire alarm break boxes.

It is noted that these can be secured for $58.70.

Bernard F. Neary
Supt. of Welfare & Training.

Ottawa, August 11th, 1947.

EAD.
A.

Mr. R.S. Davis, Indian Agent,
Punnichy, Sask.

We have your requisition for paint and other items in order to repair and paint the outside buildings at the Gordon's Indian Residential School.

In view of the difficulties that have been encountered in securing water, it appears very unlikely that Gordon's School can be reopened on September 1st.

Under the circumstances we do not feel it advisable to expend funds at the present time for painting the out-buildings. We are already committed to a very heavy expenditure at this school.

Bernard F. Neary
Supt. of Welfare & Training.

I.A. 1580-4

Memorandum:

July 25th, 1947.

Re: Water Supply, Gordon's Indian School,
Punnichy, Sask.

Further to our memorandum of June 20th, and enclosed copy of report from the International Water Supply Limited concerning the test drilling undertaken at the above School, we have now received a report from Mr. Mitchell dated
attch. July 17th, 1947, duplicate copies of which are attached herewith.

You will note that apparently two wells were drilled at the Gordon School in 1921, one to a depth of 350' and the other to 540'. It is possible that the records of these two wells might be found in the closed files of the Water Power Bureau or Indian Affairs, but we understand they are not available in the present office of the Water Power Bureau.

It is apparent that the general topography and the information secured in regard to the two wells previously drilled convinced Mr. Mitchell that drilling a 400' well in the vicinity of the School would not produce a suitable water supply.

The source of water which is recommended for development is a spring situated about one mile and a quarter south east from the School and was reported on previously by Mr. Lyon. There seems to be some little doubt as to whether this spring will produce a constant supply of water sufficient for the entire consumption at the School as it appears to be influenced by rainfall to some degree.

Mr. Mitchell suggests testing the capacity of the spring recommended for development which, of course, should be done if it is desired to abandon the present water supply from the lake, but it would appear to us that even a test which might prove satisfacotry over a period of two weeks would not guarantee sufficient water for any subsequent period, as the flow might be dependent, to a great extent, on climatic conditions.

For the present it would seem necessary to haul drinking water from the spring and if Indian Affairs consider the expenditure of $24,000.00, to connect the spring by a gravity line to the School, will be an advantage and an economy over hauling the water by team or truck, this gravity line could be installed.

The decision as to whether the new gravity line from the spring should be built will depend not only on the present cost of hauling drinking water, but also on whether the cycle of dry years is near its end and whether water in the lake

will tend to rise in level during the next few years. If the gravity line is built, in twelve months it should be possible to determine whether there is any probability that the entire water demand of the School can be met from the spring, but until that period of time has elapsed there would appear to be no guarantee whatsoever.

AIR MAIL

Banff, Alberta.
July 22nd, 1947.

Dear Sir,- Re: Water Supply, Gordon's Indian School, Punnichy, Sask.

Enclosed please find duplicate copies of Mr. Mitchell's report on the above. Under separate cover we are also forwarding three blue-prints of the plan and profile of suggested gravity water supply line from the spring one and a quarter miles southeast of the school.

It will be noted that in the first paragraph on Page 5 of Mr. Mitchell's report he refers to the necessity of further tests of the supply from the spring area before any decision is made on the installation of a gravity pipeline. It is suggested that a continuous test be run for a period of from ten to fourteen days to prove the supply. According to the analysis obtained by Mr. Hainstock the quality of the water supply is suitable. However, further samples should be taken during the testing period to determine just what effect continuous pumping has on the quality of water.

You have already been supplied with the logs of the test wells and with a drilling report, direct from Mr. Hainstock.

As stated in copy of letter attached, we have been advised by Mr. O.H. Hoover that records of the drilling work done in 1921 are not available.

Faithfully yours,

C. M. Walker,
District Engineer.

EK E.5-3(S)

Banff, Alberta.
July 17th, 1947.

MEMORANDUM:

To: C.M. Walker, Esq.,
District Engineer.

Re: Water Supply, Gordon Indian School,
Punnichy, Sask.

On receipt of a wire from Mr. Hainstock of the International Water Supply Limited, Regina, dated May 21st, in which advice was given that he expected his drilling outfit to be at Punnichy and Gordon Indian School on May the 22nd, arrangements were made to leave Riding Mountain Park the following day.

Arriving at Punnichy May 22nd at 6 P.M. and after dinner, accompanied by Mr. Hainstock, the district manager of the International Water Supply, and Mr. Davis, the Indian Agent, an inspection of the present water facilities was made at Gordon's Indian School. Mr. Lyons' report of the test holes previously made during 1946 was read; the location of the holes inspected and discussed, from which Mr. Hainstock was of the opinion it would be useless to test the same ground, as the surface features did not indicate that the catchment area would produce any great quantities of water, in view that the gravel exposures were cut up by so many depressions which are primarily supported on a clay strata. Mr. Mayo, the principal of the school, informed us that he had been in conversation with Mr. W. Swan, Secretary of the Touchwood division, some days previously, during which Mr. Swan had informed him that during the building of the school the area in the vicinity of the school had also been drilled by an outfit from Regina in 1921. With this information it was decided by Mr. Hainstock and myself that we contact Mr. Swan the following day.

May 23rd, while the drilling outfit was being overhauled, Mr. Hainstock and I interviewed Mr. Swan, who informed us that he had been Clerk-of-Works during the building of the school, and although he had searched through his records for the log of the holes drilled, mentioned by Mr. Mayo, he had been unable to locate them. However, he produced some letters from his files from the driller - a Mr. Dempsey, who was doing the testing for the firm of McPherson and Thom, Regina, under instructions from Mr. French of the Water Powers & Reclamation Branch. These letters indicated that during 1921 two holes had been drilled in the vicinity of the school, one to a depth of about 350 feet, and the other to a depth of 540 feet. The letter referring to the second hole did not say the test was at a depth of 540 feet, but mentioned that in drawing the pipe they had drawn 390 feet of pipe and had to leave 150 feet in the hole on account of caving. Mr. Swan informed us that both tests were unsatisfactory and as the work had been done under the Direction of the Water Powers and Reclamation Department the logs would be on record at Ottawa. In view that the tests were unsatisfactory Mr. Hainstock and I considered it would be useless to test the same ground.

Accompanied by Mr. Hainstock we returned to the school and scouted the district within a radius of a mile of the school buildings and decided that a No.1 test hole on the main drainage water course from the Fort Lakes, which at one time drained through the water supply

lake at .....

www.collectionscanada.gc.ca

lake at the school, would be the most likely place to intercept any underground flowage or water-bearing gravel and, as the following day was a holiday, the drill was set up at this point on the 26th of May. Mr.Hainstock 's report and log covers the result of this and other tests made during the following two weeks.

During the 24th, 25th and 26th I reconnoitered the district around the school for a distance of about four miles, inspecting various surface wells, also water holes or wells in the vicinity of springs which appeared to have surfaced at one time, and which had been dug or opened up by the Indians who had farmed these areas for many years. All of the surface wells were not over sixteen feet deep, had about four feet of water and had either been deepened or redug at various times. Many of the Indians hauled water from their neighbour's well on account of their own drying up or the water unfit for use. In the area that lies to the southeast of the school one and a quarter to two and a half miles where the springs or seepages occur, the older Indians informed me that their water holes or wells dug in the vicinity of these seepages had never dried up during their lifetime and some of these Indians were over fifty years of age.

On the 27th Mr. Hainstock returned from Regina and checked up with his driller on test hole No.1. From the records of the drilling and from his experience of testing in terminal moraine deposits he was convinced that it would be useless to continue the test on No.1 much further as the bottom of the test hole was 37 feet below the bottom of the lake and no water-bearing gravel had been encountered. I detailed to him my reconnaissance of the previous three days and accompanied by Mr. Hainstock covered some of the ground reconnoitered, and inspected the well at the spring one and a quarter miles southeast of the school. The possibilities here appeared to be more promising than elsewhere, and it was decided to make a pump test and if favourable, test the depth of the water-bearing gravel that the seepage came from.

On the 28th a small thirty gallon a minute pump was set up at the spring well. The cribbing of the well is four feet square and the water level before pumping , 1.3 feet below ground level, and the depth of water about three feet. After the water had been lowered, the well cleaned out, and a sump made, the inflow showed a very strong stream coming from the high ground with seepage around the low side of the cribbing. After pumping for thirty minutes the water level in an old water hole about twenty feet south of the cribbed well was taken down about two inches. A rough flow test was made by cutting down the rating of the pump to about ten gallons per minute and after the inflow had about balanced the discharge, the flow into a forty-five gallon drum showed a discharge of about ten to twelve gallons per minute, and Mr. Hainstock and myself considered a test hole should be put down to find the depth of the water-bearing gravel above the ground that the strong stream appeared to come from and the drilling rig was moved to drill hole No.2 at the spring.

On May 29th the crew got the rig set up at No.2 hole and commenced drilling at 3:00 P.M. Progress was very slow, as the bit was encountering numerous boulders. By 4:30 P.M. the hole had been driven about six feet only and was still in boulder gravel. The work was suspended for the day and drilling resumed during the forenoon of may 30th, but progress was even slower than the previous afternoon, and after the drill bit had been bouncing around on the top of a hard granite boulder at about eight feet deep for about thirty minutes without making any headqay, the driller decided that he would either have to set the rig up in another location or test the bottom of the well by deepening. As Mr. Hainstock had left for

Yorkton to inspect .....

www.collectionscanada.gc.ca

Yorkton to inspect other work, the Company was working on, I approved of the driller's suggestion to deepen the well and this work was proceeded with. After deepening about 1.5 feet, and before quitting time, I had the driller make a rough flow test for about ten minutes. The deepening of the well appeared to have improved the inflow to about twenty-five gallons per minute, which was nearly double of the test made on May 28th without any deepening. As the Drilling Company employees only work five days a week, work was suspended until Monday June 2nd.

The work which had been done so far at this spring seepage appeared worth while, so I decided to run a traverse line and gather sufficient data with respect to its location, elevation, etc. I arranged with Mr. Mayo, the school principal, to loan me some Indian boys and during the next three days a traverse line had been cut and chained from the school to the spring, and levels completed by June 4th. From the data collected I have prepared a sketch plan and profile which can be used to secure a cost of developing this spring as a gravity water supply for the Gordon Indian School. The level datum is assumed, and is that established by Mr. Lyons. The bearing of the traverse line is referred to the tie made on the 1/4 post found on the northern boundary of Section 2, Township 27, Range 17, West of the 2nd Meridian.

On Monday June 2nd the drillers continued the deepening of the well and carried the cribbing down to ground level. The cribbing has a depth of 5.8 feet and the well was deepened or dished in the bottom about two feet below the crib walls. To do so, two pumps throwing about 75 G.P.M. had to be used to keep the water sufficiently low to work in. The excavation was still in boulder gravel when the work reached this depth, and further deepening could not be proceeded with as the capacity of the two pumps was insufficient to keep the water low enough to work in. With one pump throwing about 45 G.P.M. the water level gained very rapidly for about five minutes after the other pump was cut out, after which it was much slower. Pumping was stopped at 4.30 P.M. and the well allowed to recover over night. Mr. Hainstock arrived at Punnichy at 9:00 P.M. and arranged with his driller to make a flow test the following day.

On June 3rd Mr. Hainstock and the driller made a flow test of the deepened well at the spring. Inspection of this recovery indicated that the water level had recovered to within .75 feet of normal during the sixteen hours the pump was off. After pumping commenced the two pumps were run to full capacity for two hours, the discharge being taken about fifty feet away from the well. During dead low a sample of the water coming in from the spring was taken, after which the pumps were cut out and the water allowed to return to within 24" of normal. The smaller pump was adjusted to throw about 20 Gals. per minute and continued pumping for five hours and fifteen minutes without showing more than a rise or fall of one tenth of a foot variation. A flow test was made at 3:00 P.M. and a 45 gallon drum was filled in two minutes ten seconds, indicating that the average inflow at 24" below normal was approximately 21.4 Imperial gallons per minute. A sample of the water was taken and the pumps cut out at 3:15 P.M. Recovery after five minute duration, after pump was cut, was four-tenths and much slower until at two hours the well had recovered to within .75 tenths of normal. During the five hours and fifteen minutes of pumping that day, it is estimated that approximately 8,000 gals. had been pumped and as the tailwater from the pump was fifty feet away, a very small amount of the discharge had recirculated. It was also noted that during all the time the test was being made, the water hole twenty feet south of the well, was only drawn down fourteen inches.

Before Mr. Hainstock left for Regina he arranged for his driller to make test No.3 at Station 44+ on the traverse line, in the hope that the water-bearing gravel of the spring might extend north towards the school. The result of this test is shown in the log of

hole No.3 .....

Indian Affairs. (RG 10, Volume 6310, file 654-5, part 5)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

Library and Archives Canada / Bibliothèque et Archives Canada
www.collectionscanada.gc.ca

hole No.3. From my own observation of the terrain I am of the opinion that the water-bearing gravel of the spring does not extend further north than the ridge that the traverse line crosses at P.I. Station 54 + 21.9 and that the gravel lifts onto a clay boulder formation that has considerable depth and extends throughout the area. It is doubtful if a deep hole down to bedrock would intercept other gravel formations that had been laid down intermittently with the glacial clay formation. If deeper gravel beds were intercepted below the zone of the glacial clay, the waters found would be more highly mineralized than the gravel formation at the spring, and would not be fit for domestic purposes.

During the night of June 3rd a heavy thunder and rainstorm prevalied throughout the district for about three hours and when the well at the spring was inspected on the morning of June 4th the water level in the well was .5 feet above normal, indicating that climatic conditions will affect the water level of the well. This, of course, is to be expected of any surface well. It is doubtful if the spring seepage contributed to any great extent the rise above normal water level recorded. For example, the surface well of Mr. Fisher's shown on the plan about 2000 feet west of the school, has a depth of about sixteen feet and has a depth of five feet of water generally throughout the season, but last fall, after the September rains, before freeze-up, the depth of the water was approximately nine feet. This was indicated by the rim of ice that still hung in the cribbing when the well was inspected. No check was made on this well as to what affect the rainstorm of June 3rd had on the water level, but no doubt it was much higher than when inspected.

On June the 5th the drillers got the rig set up at No.3 test hole by noon and had drilled thirty-one feet by 4:45 P.M. and were drilling in sandy clay with boulders. Water level at the spring well had gained .22 feet during the twenty-four hours and the water level, according to the datum, was 126.89 feet, approximately twelve feet above maintained water level in the storage tank at the school. Test drilling at No.3 hole was resumed on Friday June 6th, and by 4:30 P.M. had reached a depth of sixty-two feet. Drilling was much slower than the previous afternoon in view that some boulders were encountered and had to be drilled. At quitting time the bit was bouncing on another large boulder and as there would be a layoff during Saturday and Sunday I left Punnichy for Regina at 7:00 P.M.

On June 7th at Regina I contacted Mr. Hainstock and discussed the drilling programme and advised him of the results of the test at No.3 up to closing time on the 6th. From his conversation he was doubtful that the test would be successful. However, I suggested that he continue the drilling and give the ground a thorough test and advise your office of the location of all holes drilled and the results. Mr. Hainstock conveyed to me the partial analyses he had got of the water samples taken at the spring, and these looked encouraging. Later I contacted Mr. Ostrander, Superintendent of Indian Affairs stationed at Regina and discussed the results of the present drilling test made at Gordon's Indian School and enquired about the records of the test made in 1921, but as his files on Punnichy only went as far back as 1926 he was unable to give me anything on these tests.

During my .....

Indian Affairs. (RG 10, Volume 6310, file 654-5, part 5)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

Library and Archives Canada / Bibliothèque et Archives Canada
www.collectionscanada.gc.ca

During my conversations with Mr. Ostrander in connection with the present and the future possibilities of securing a satisfactory water supply for the school, I outlined the unsatisfactory r results that had been obtained so far from the drilling tests and informed him that if the department of Indian Affairs were prepared to expend about $20,000.00, a gravity pipeline could be laid from the spring 6600 feet to the school, providing that the analysis of the water samples taken was satisfactory and that if a daily pumping test of say two week's indicated that a daily drawdown of eight or ten thousand gallons per day would not deplete the storage of the water-bearing gravel from where the spring was drawing its supply. To this Mr. Ostrander was of the opinion that if the spring could not be developed and no useable supply could be found from drilling, with sufficient flow to meet the needs of the school, it would mean the closing of the school and the abandonment of a large investment by the government, or continuing the present costly and very unsatisfactory method of pumping , flushing water from the water supply lake and drawing on rain water from the roofs and supplying ice or hauling water from a surface well for drinking and domestic use.

After reviewing Mr. Hainstock's report dated June 17th I agreed with him that, of the various sites investigated, the spring, one and a quarter (1¼) miles southeast of the school, offers the best possibility of obtaining a fairly good water supply, that would provide the estimated consumption of seven to ten thousand gallons per day required for the school, but I am not prepared to say that I would place the area as suspect, in view that the well did not fully recover before the heavy rainfall of the evening of June 3rd. From observations taken by me after the pumping of five and three hours during May 28th and 30th at a rate of about ten to fifteen gallons per minute, and before any deepening had been done, the recovery record of one-tenth below normal after a two day layoff would appear reasonable, and that after deepening on June 2nd and pumping for about seven hours at a rate of forty to sixty gallons per minute it is reasonable to say that static head would have lowered somewhat and that a full recovery to the original water level could not be expected, but the recovery after that day's pumping, and a night's layoff which was recorded as 7½ tenths below normal, compares very favourable with the recovery of June 3rd pumping test of five hours at the rate of about twenty gallons per minute, when after the pumps had been cut out, and after a two hour layoff, the water level had again recovered to within 7½ tenths below normal.

The facts as outlined here indicate that the spring at this well, if fully tested by a daily pumping test as previously suggested, has possibilities of a potential water supply that would meet the needs of the school. A summary estimate of cost of installing a three inch gravity pipeline, using G.I.P. is attached hereto. A four inch wood stave pipe could be used and would probably reduce the cost below $20,000.00.

The spring reported by Mr. Lyons and referred to in head office letter of June 20th is the water hole mentioned in this report, and is situated about twenty feet south of the cribbed well. At the time of Mr. Lyons' inspection the cribbed well was not dug. During the tests at this cribbed well we pumped this water hole out and the rough test of flow showed up considerably better than that mentioned by Mr. Lyons, but as the cribbed well was better for our tests the drillers did not concentrate in doing any work, or keeping any records of the actual flow, other than tab the drop in water level during the other tests.

With the twelve foot head available between water level at the spring, and the present maintained water level of the tank at the school using a three inch pipeline there would be a hydraulic flow of 20- I.G.P.M. which is approximately three times the school's present sixteen hour daily

consumption .....

Indian Affairs. (RG 10, Volume 6310, file 654-5, part 5)

www.collectionscanada.gc.ca

consumption. From the tests made at the spring on June the 3rd the test indicated an inflow of over twenty-one Imperial gallons per minute, in view of which - if the well stands up under further testing, the schools requirements can be met with a gravity line. An increased discharge to the tank could be got by placing a booster pump on the main at about Station 22+00 and using the hydraulic flow of about 40d Imperial gallons per minute, which is available under the thirty-five feet head at this point. Further, if it is desirable to construct a new tank at the school to receive the spring water, additional head could be got by placing the new tank at a lower level and maintain a lower water level. In this case it would probably be necessary to place the pressure tank pump lower also.

DEPARTMENT OF MINES AND RESOURCES
SURVEYS AND ENGINEERING BRANCH

Dominion Water & Power Bureau.

Calgary, June 27th, 1947.

Dear Sir: Attention Mr. J.H. Mitchell.

In further reference to your request for the log of a water well drilled under the supervision of Mr. M.H. French in 1921, I now have to inform you that we have been unable to find this log and likewise it is not available in our Ottawa office.

Ottawa, however, advises me that, through the kind co-operation of the Indian Affairs Branch, a copy of the log of a well drilled at the Gordon School in June of this year has been obtained and the same is enclosed.

I trust that this will give you the desired information.

Yours truly,

(Sgd.) "O. H. Hoover"

District Chief Engineer.

Mr. Hoey

Re: Water Supply System, Gordon's Indian School,
Punnichy, Sask.

Enclosed for your information is a copy of a memorandum from Mr. Mills, dated July 25th last, with attachments, which is self-explanatory.

We could have wished to have secured more definite information about the wells said to have been drilled in the immediate vicinity of the school in 1921, but the files regarding them are not in the offices of our Dominion Water and Power Bureau in Ottawa, and it may not be possible to locate them in Calgary. We would ask that your own files be searched for a report on this matter, and that we be furnished a copy if it can be found.

We concur in Mr. Mills' opinion that a continuous test which gave satisfactory results for as long as two weeks, would not guarantee that a sufficient water supply would be available for an extended period, and hesitate to make any recommendation regarding the scheme to cost $24,000 until we are satisfied that there is very good grounds for believing that it would make a sufficient supply permanently available. The cost of making longer tests is being looked into.

John A. Lounder.

General Executive Assistant.

Gordon Indian Residential School

Dear Doctor Alderwood:

In view of the delays that have been experienced in finding water at this school and in repairing the boilers and heating plant, it has been decided to delay its opening for at least two months.

As work on these two projects advances, we will be in a better position to decide on the opening date and will advise you accordingly.

Yours sincerely,

Director.

GORDON SCHOOL

This school is a lot better than it has been, however, there is lots of room for improvement regarding staff and discipline.

The engineers were here regarding the water supply but to date I have had no report from them, Something will have to be done at once about the water and boilers if it is the intention of the Department to open the school again this fall. I would hate to have another winter suchas last winter looking after the water and broken boilers etc. If the School is re-opened this fall the Department should insist on a first class engineer being engaged as the class of engineer the school authorities engage is more or less of a joke and wears out more machinery than he is worth.

Gordons Indian Residential School

Further to our letter of similar file of August 13th.

It has been recommended by Dr. Alderwood that we conduct a day school for some of the pupils of the above residential school during the time it is closed for repairs.

Could you please report on the number of children who are within walking distance, using as a guide the standard that children under 10 can be expected to walk 2 miles and children over 10 can be expected to walk 3 miles. You might also explore the possibility of using a bus for their transportation.

Dr. Alderwood has suggested that we hire Mrs. Mayo as the teacher of this school. Upon hearing further from you we will be in a position to decide on this matter.

Bernard F. Neary
Supt. of Welfare & Training.

Mr. R. A. Hoey,
Director, Indian Affairs Branch,
Dept. of Mines & Resources,
Ottawa, Ont.

Dear Mr. Hoey, Gordon's Indian Residential School

I beg to acknowledge your letter 121-1-5 (WT) of the 13th inst. and note with regret the decision to delay the opening of the above school for at least two months. This decision has, of course, been expected as we have felt confident that the school would not be in fit condition for occupancy by September first. I wish to pay my personal tribute to the complete cooperation we have received from officials of the Branch and I know that everything possible is being done to deal with this very difficult situation.

We are, of course, faced with the problem of disposing of our staff and feel it wise at this time to divert the majority of them to other schools. Even so, we are faced with the necessity of retaining a sufficient number on our salary list to see that the building is kept in good order and that farming operations are carried on effectively. If this situation continues for any length of time we shall again be faced with a very heavy loss in operation as we were last year when our costs continued and there was no income with which to meet them. I feel confident that we shall receive consideration from the Department if this situation arises owing to causes beyond our control.

Thanking you and with kind regards, I remain,

Yours sincerely,

H. A. Alderwood

Superintendent.

Ottawa, August 21st, 1947.

Memorandum:

DIRECTOR, SURVEYS & ENGINEERING BRANCH

Re: Gordon's Indian Residential School.

Reference your Memorandum of August 9th.

We have now notified Inspector Ostrander and Dr. Alderwood of the Church of England that because of delays that have been experienced in finding water at this school and in repairing the boilers, it has been decided to delay the opening for at least two months.

Therefore, could we be notified as soon as possible when we can anticipate the re-opening of this school. It will take Dr. Alderwood three weeks to one month to gather a staff and we must give him ample warning of the date upon which your work can be completed.

We have searched our files but can find no well reports as requested in paragraph two of your letter. Our files do indicate, however, that this work was carried out under the supervision of the Dominion Water & Power Bureau.

Apparently the original site selected was not satisfactory because Commissioner Graham wired on 22nd June, 1921, that they had not been able to find water.

Our files indicate that the old school was located in NE¼ of Section 3 Tp 27 Rge 17 W 2nd Meridian. Please find attached township map which we wish returned after you have referred to it.

There are not sufficient funds in our estimates for this year to warrant the expenditure of $24,000. on a gravity line from the spring, as intimated in Mr. Mills' memorandum of July 25th. However, we hope that we will receive a definite recommendation from you when a decision has been reached as to the reliability of this spring.

re Gordon Indian Residential School

Regarding the plumbing etc needed at the abovemamed school, this should be done before freezeup, as if the building is left without heat all winter the plaster will crack and the cement floors will heave and the building will go more or less to ruin, which will be very expensive to us.

I would recommend that work on this be rushed as quickly as possible.

Indian Affairs Branch, Dept. Mines & Resources, Ottawa, Ont,

With reference to Department letter #121-1-5 (WT) dated August 18, 1947 re the Gordon Indian Residential School, I do not think it feasible to open it as a Day school as there will be no heat there for the children and a big building like this is always more or less cold.

There is no way of putting up stoves on account of the location of the chimneys. The only place would be the dining room and as this room will be one place where a lot of plumbing will be going on, it is out of the question to think of it.

Re: Gordon's Indian Residential School
Punnichy, Saskatchewan.

In connection with Mr. Hoey's memorandum of August 27th, 1947, bearing your notation of the 30th instant thereon, you are advised that six (6) sets of plans and specifications were forwarded to Inspector J.P.B. Ostrander on August 2nd with a request that competitive tenders be obtained covering the work outlined thereon.

To date no word has been received by this Service, and it is assumed that Mr. Ostrander is still taking bids.

The importance of quick action was stressed in our letters of July 17th and August 2nd to him, and it is felt that he will provide all the co-operation possible to obtain an early start, as he is fully aware of the conditions.

Upon receipt of the tenders, we will give our immediate consideration and will further advise you.

Regina, September 4th, 1947.

Dear Sir:

With reference to your letter of the 2nd ultimo, I.A. 1580-4, regarding the Gordon's Indian Residential School, Punnichy, Saskatchewan, upon receipt of your letter, plumbers for consideration in the City of Regina were informed of the work to be done at the Gordon's School and no reply was received from any one of the firms in question. Some time later, in conversation with an official of the Department of Public Works in Saskatoon, I was informed that the William George Plumbing Company, of Prince Albert, who have done considerable work in a satisfactory manner for the Department of Public Works, might be interested in the work. Following an interview with that firm Mr. C. Simonson, of the firm, visited the Gordon's School yesterday in the company of Mr. J. Ramage, of the Department of Public Works, and I met them at the school and went over the proposed work with them.

Mr. Simonson is to furnish me with an estimate of the work and I am also receiving a report from Mr. Ramage commenting upon changes which he suggests should be made in order to make a completely efficient heating plant.

As soon as this information is received it will be forwarded to our Branch for further consideration.

I see little hope of re-opening the Gordon's School for some time because of the fact that there will be difficulty in purchasing a boiler. Mr. Simonson informed me that the remainder of the necessary equipment can probably be purchased fairly promptly but that if he gets the contract he would like the assistance of the Branch to speed the purchase of the boiler.

With regard to the last paragraph of your letter referred to, asking for three tenders, it would appear that we will be fortunate to get even one as plumbing contractors seem to have very little interest in work at country points at the present time. However, the tender of the William George Plumbing Company will be forwarded for consideration when received.

Yours truly,

J.P.B. Ostrander,
Inspector of Indian Agencies,
Saskatchewan.

DEPARTMENT OF PUBLIC WORKS, CANADA

510 Federal Building,
Saskatoon, Sask.,
September 5, 1947.

J.P.B. Ostrander, Esq.,
Inspector of Indian Agencies,
Indian Affairs Branch,
Post Office Building,
REGINA, Sask.

Dear Mr. Ostrander:

Re: Heating Plant - Gordon Residential School - Touchwood, Sask.

As requested by you, I am forwarding report on the heating plant at the above noted building.

I will refer you to your discussion with myself and Mr. Simonson, the heating Engineer, at the above noted school on Wednesday, September 3rd. Upon inspection of the existing plant I found it to be in a filthy condition and utterly inadequate to service the building in which it is located. I might further say that the entire plant has suffered from improper care and might I recommend that in the event of a new plant being installed that every reasonable effort be made to obtain the services of a competent engineer who could maintain and generally look after the plant in a manner so that you might hope for efficient heating.

I found that the drawings which you gave me of the building were not correct as to detail. It, therefore, will be necessary to arrange the radiation differently than shown on the drawings and it was agreed between Mr. Simonson and myself that he, as the contractor, would furnish and re-arrange adequate radiation and guarantee the efficient operation of the same for a period of not less than one year. I might further point out that you were singularly fortunate in obtaining the services of Mr. Simonson as he is undoubtedly one of the outstanding heating engineers in this province and a very highly qualified man.

Referring to the heating plant and hot water and steam supply, I would recommend that all the existing plant be discarded--that is, the existing heating boiler, the existing water heater, and the existing vertical high pressure boiler. I might say that none of these are, in my considered opinion, serviceable and by re-using any portion of the equipment you would merely be giving yourself a source of continual grief. I would, therefore,

recommend that new boilers..

Indian Affairs. (RG 10, Volume 6310, file 654-5, part 5)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

Library and Archives Canada / Bibliothèque et Archives Canada
www.collectionscanada.gc.ca

recommend that new boilers as indicated on the plans and specifications be installed and that a high pressure boiler of the horizontal type of about 15 H.P., operating at 100 pounds pressure, be installed. In the matter of indirect water heating, I would recommend that the indirect type of below water in boiler heater be installed. This could be made to operate from either the low pressure or the high pressure boiler. The high pressure boiler would furnish you with adequate hot water for summer use and if desired the heater could be operated from the low pressure boiler during the heating season. The object of recommending this type of installation is that there are no reducing valves or valves which might give a source of trouble and this, in my opinion, is as nearly a fool-proof installation as it is possible to install. The building being some considerable distance from town, I feel that every effort should be made to so design and install the plant that the man in charge would be able to carry out his own running repairs.

After having studied the building and become conversant with the problems and difficulties which have existed in the past, I would very strongly recommend the installation of a Dunham vacuum pump in the system. The boiler being located very much in one corner of the building, the entire plant will at all times tend to collect condensation and siltage and by use of the Dunham vacuum type pump you would be assured of ample heat in the most remote corner of the building. I might say that the Dunham type vacuum would entail a slightly greater cost, but I feel that such an expenditure would be justified in the interests of efficiency and simplicity. It would also tend to show a very decided reduction in fuel costs. Inspection of all the plumbing and heating pipe indicates that it is badly pitted and rusted, and I have reason to believe that this condition has been caused through the chemical action of the salts and minerals present in the water. The water is definitely of a very poor nature for boiler service. You indicated to me that a soft water tank was proposed. While soft water is a very good source of supply, at the same time it is not to be recommended unless handled by a highly skilled engineer. I would, therefore, recommend that a water softener be installed which would soften all hot water used in the building and at the same time soften the water used in the boilers. I would not recommend softening all water in the building as a very large amount is used for sanitary purposes and it would take an enormously large installation to handle the water which would be used.

I further found a great many cracked radiators and the Principal of the School informed me that members of the staff opened the windows, turned off the radiators, and left them, thus causing through condensation the radiators to freeze up and split. To overcome this condition, I

would recommend that.....

Indian Affairs. (RG 10, Volume 6310, file 654-5, part 5)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

Library and Archives Canada / Bibliothèque et Archives Canada
www.collectionscanada.gc.ca

would recommend that small vents be bored or cut in the valve faces so that these radiators can never be shut off tight, thus a limited supply of steam will pass through them, overcoming the frost hazard.

The water filter which is presently in the building is obsolete and worn out and definitely beyond repair and as you indicate a new water supply is being led into the building and I feel quite sure that with a softener your water troubles will be over.

I found that all the main traps in the building were worn out, rusted and scaled. This condition unquestionably has arisen through use of very impure water in the boiler and possibly to a large extent caused through the improper handling of the heating at the boiler source. I further found that a great deal of sediment is present in many of the radiators. These will have to be removed, flushed and, in many cases, acid treated to make them clean.

I find that the existing smoke stack is of sufficient capacity to handle the proposed new boiler installation.

I am pleased to be able to inform you that Mr. Simonson has been successful in obtaining the services of Shannon Brothers, the general contractors, to carry out the necessary structural alterations. They are a highly reputable firm and you can rest assured that the work is in good and safe hands and will be well carried out. I propose visiting the school again in company with Mr. Shannon and going over the necessary structural alterations.

Mr. Simonson and myself prepared final details of the foregoing proposal before he left Saskatoon yesterday and as soon as possible I will forward to you sketch copies of the proposed new lay-out. As you will readily appreciate, it is going to take some considerable time to round up sources of material supply and prices, but I have been assured by Mr. Simonson that he will have a detailed price to you at the earliest possible moment.

Trusting that the foregoing is sufficiently comprehensive in information and will prove of value to you and assure you of my willing assistance in any further manner that you desire.

Yours very truly,

File #1409-312-11 ACE.

Regina, September 13th, 1947.

Dear Sir:

With reference to your letter of the 9th instant, File No. I.A. 1580-4, re Gordon's Indian Residential School, Mr. Ramage, Mr. Simonson, and I visited the Gordon's School together on the 3rd instant and went over the heating plant rather carefully together.

Enclosed is copy of Mr. Ramage's report to me on the matter. The tender from Mr. Simonson, of the William George Plumbing Company, has not been received but will be forwarded to the Department as soon as received.

With regard to the fourth paragraph of your letter referred to, the William George Plumbing Company will base their estimates as far as possible on the drawings and specifications prepared by your Service but it will be noted that there is an error in the blueprint and also some recommendations made by Mr. Ramage which I believe should be kept in mind when the tender is received.

Yours truly,

J.P.B. Ostrander,
Inspector of Indian Agencies,
Saskatchewan.

Attention: Col B. F. Neary

Supt. of Welfare & Training,
Indian Affairs Branch,
Dept. of Mines & Resources,
Ottawa, Ont.

Dear Colonel Neary, re: Gordon's Indian Residential School

I have your letter 121-1-5 (WT) of the 9th and have read with interest the letter of Inspector Ostrander dated September 4th.

I may say that I have just returned from visiting the Gordon's School and was disappointed to find that no work had been commenced either on the water or heating systems. We have been maintaining a staff of workers at the school in anticipation of the early arrival of a group of workmen. The report I received on the ground was to the effect that the contractors are now beginning to search for material and that the date when the gang will reach the school is altogether uncertain. This places us in a very difficult position as we are paying salaries needlessly, without much hope of income, and if we dispense with the services of the present workers it may be hard to secure others when the need arises.

May I pass on also the serious warning uttered by our acting-principal, Mr. Mayo, in regard to the danger of damage by frost. The nights in the West are already cold and the building is now chilled through and really unfit for occupation. If nothing is done to maintain even a minimum amount of heat, any day there is serious risk that very costly damage will be done to the whole building when more severe frosts occur. Possibly the contractors have this danger in mind but they will need to move quickly in view of the date we have now reached.

A letter from the Director sent to this office on August 13th spoke of the decision to delay the opening of the school for at least two months. My impression gained on the ground was that it will certainly be the beginning of 1948 before the school is ready for occupation and

may very well be much later than this. In these circumstances, I trust that consideration will be given to the matter of responsibility for the building as we plainly cannot be expected to maintain an acting-principal and other workers to protect the interests of the Department in this building.

With kind regards, I remain,

Yours sincerely,

N. A. Alderwood.

Superintendent.

Memorandum:

DIRECTOR, SURVEYS and ENGINEERING BRANCH

Gordon's Indian Residential School -

The attached letter from Dr. Alderwood, of the Indian School Administration of the Church of England, is self-explanatory. It would be appreciated if we could be advised as to the progress being made by the contractors so that we can advise Dr. Alderwood concerning the responsibility for the maintenance of this building before and during the time the repairs to the heating plant are carried out.

It is also felt that the Principal's warning concerning the danger of damage by frost should be brought to the attention of the contractors, so that they can take the necessary steps to keep the building heated at least slightly during their time of occupancy.

AIR MAIL

October 7, 1947.

Re: Gordon's Indian Residential School, Punnichy, Sask.

Further to our letter of October 1st, with reference to the above, you are advised that to date we have received no prices on the proposed alterations and revisions to the mechanical services at the above.

It would appear from a memorandum just received from Mr. Hoey, to which was attached a letter from Dr. Alderwood, that the Doctor has been given the impression that the contractors are ready to start operations as soon as they have procured the necessary materials. Also, he and the Acting Principal, Mr. Mayo, are concerned about keeping the frost out of the building during the coming season.

It is unfortunate that this impression has been created as there is no basis for same. As you know, no work can be started until the prices submitted to you by firms you have requested to tender, have received our consideration and the approval of Indian Affairs. It is, therefore, your responsibility to take the necessary action to get these prices in at the earliest possible date so that a decision can be reached.

With regard to keeping frost out of the building it should hardly be necessary to suggest that the present heating system be started up and carefully nursed along until such time the new work is commenced, when other arrangements will have to be considered. We are not optimistic as to how long some items of the present equipment will function, but we see no reason why it should stand idle since it would appear that some members of your staff will be on duty for some time, and heat will have to be provided under the circumstances.

Your co-operation with regard to obtaining speedy action from the bidders will be greatly appreciated.

T.S. Mills,
Chief Engineer.

INDIAN AFFAIRS BRANCH

File #1606-312-11 ACE.

AIR MAIL

Regina, October 20th, 1947.

Chief Engineer, Surveys and Engineering Branch, Department of Mines and Resources, OTTAWA.

I wish to acknowledge receipt of your letter of the 1st instant, File No. I.A. 1580-4, regarding the Gordon's Indian Residential School, of Punnichy, Saskatchewan.

After months of endeavouring to get plumbers interested in the work to be done at the Gordon's School, and being unable to find anyone in the southern part of the province who would even give a quotation, I succeeded in getting Mr. Simonson, of the William George Plumbing Company, Prince Albert, to visit the school and to take your plans with him. He asked that Mr. J. Ramage, of the Department of Public Works, with whom he had had considerable dealings, accompany him for purposes of advice to him and to me. Mr. Simonson would not examine the plant unless Mr. Ramage accompanied him. I point this out as you seem to be under the impression that Mr. Ramage, who is a qualified engineer with the Department of Public Works, went beyond his duty in making certain recommendations. With regard to the third paragraph of your letter referred to, as to Mr. Ramage's comment that the building drawings are not correct as to detail, I may say that I was with Mr. Ramage and Mr. Simonson when they went over the building and they tried to follow your blueprint. It was impossible to do so as it very definitely is not correct as to detail in several respects. I am surprised that your engineer did not discover this when he visited the school.

As Mr. Simonson is the only plumber interested in the work at the present time, and as Mr. Simonson wishes to follow Mr. Ramage's recommendations with regard to the work, I would be glad if you would either consent to that arrangement or send your own engineer to discuss the matter with Mr. Simonson. I have not received Mr. Simonson's quotation yet but expect to receive it within a day or so. However, when it is received it will be based upon the layout as recommended by Mr. Ramage and approved by Mr. Simonson. I have no other quotation and do not expect to receive any other.

...TOR OF INDIAN AGENCIES

AIR MAIL

Regina, Octo...

Chief Engineer, Surveys and Engineering Branch, Depar...
Resources, OTTAWA, Ontario.

Plans were made some months ago to install water at the Gordon's Indian Residential School from a spring 1600 ft. away from the school. I understand it was intended to install a reservoir in the spri... and pipe the water below the frostline to the well. This will entail a great deal of excavation and concrete work. If it is not started very soon there is no hope of having it completed this winter.

To spend many thousand dollars to overhaul the heating plant at the school before there is an adequate water supply seems to me a waste of time and money as the school still cannot be opened until there is an adequate supply of safe water. Part of the plan suggested by Mr. J. Ramage, of the Department of Public Works, was the installation of a water softener in the school which would make the water from the spring suitable for use in the boilers. The water which has been used is from a stagnant slough nea... the school and is not fit for use in the boilers and certainly not safe for human consumption.

J.P.B. Ostrander,
Inspector of Indian Agencies,
Saskatchewan.

DEPARTMENT OF [illegible] RESOURCES

INDIAN AFFAIRS BRANCH

File #1609-312-11 ACE.

Department of Mines & Resources
Indian Affairs Branch.
OCT 23 1947
REGISTERED

Regina, October 20th, 1947.

Indian Affairs Branch, Department of Mines & Resources, OTTAWA.

I am enclosing three copies of letters addressed to the Surveys and Engineering Branch in connection with the Gordon's Indian Residential School.

I am of the opinion that the examination of the heating plant by Mr. Ramage, of the Department of Public Works, was more thorough than that of the engineer of the Surveys and Engineering Branch. I am also of the opinion that Mr. Ramage knows more about heating problems in the West than most heating experts with only eastern experience are likely to know.

I should say quite frankly that I do not consider I have had very much assistance from our Surveys and Engineering Branch in any project which has been worrying me, and I have had a great deal of assistance from Mr. Ramage. I would therefore respectfully suggest that instead of quarrelling over small technical matters wherein Mr. Ramage does not agree with an engineer from our Surveys and Engineering Branch, the latter be asked to proceed on the basis of the plan decided upon between Mr. Ramage and Mr. Simonson, of the William George Plumbing Company, Prince Albert, who apparently have every confidence in each other and who will then both feel responsible to see that the installation is satisfactory in every respect.

With regard to the question of endeavouring to keep the building heated with the old installation until the new is completed, I do not know what arrangements have been made between our Branch and the Church Authorities but if Mr. Mayo is to continue for the winter,or until a new plant is installed, authority should be given to Mr. Davis, the Indian Agent, to get a plumber into the school to perform what work is necessary to avoid damage to plaster, radiators, pipes, etc. If the contract is given to the William George Plumbing Company, of Prince Albert, I believe that firm would be willing to send a man to look after this temporary work until material can be procured and the proper installation completed. Please instruct me in this connection at an early date.

FAL

I.A.1580-4

AIR MAIL

October 29, 1947.

Re: Gordon's Indian Residential School - Punnichy, Sask.

We have your letter of October 20th, 1947, and your remarks have been given careful consideration and it is noted that Mr. Ramage visited the school at the request of the Wm. George Co. We have reviewed Mr. Ramage's report on the present condition of the mechanical services at the school and have noted his comments and recommendations.

Regarding errors you report as appearing in our drawings for this project, we are mailing, under separate cover, one set of floor plans. It is possible that our engineer could have overlooked some minor changes when carrying out his inspection as he was mainly concerned with gathering data relative to the condition of the mechanical equipment and the piping distribution, and it seems unlikely to us that major changes to the building structure would have escaped his notice.

If changes in the position of partitions or other features have been carried out since the building was erected, would you kindly mark them on the set of plans and return them to this office as soon as possible. Upon receipt of same we will make the necessary adjustments to our layout which will include changes to radiator sizes as may be required.

You have stated that the only price you expect to receive will be based on Mr. Ramage's layout with Mr. Simonson's approval. This Service has given a great deal of thoughtful consideration to the requirements, and with the data and observations noted by our engineer on his inspection, a layout was designed which will provide a satisfactory job. Should this layout be affected by changes that you state exist, our design will be adjusted to suit same, and you will be required to assure this office that prices are based on the drawings and specifications prepared by this Service.

Up to the present time, we can offer no comment on how a permanent source of water supply will be made available. As you are aware, drilling operations have been carried out during the past summer and the results showed little promise of an unfailing source of water.

Insofar as that matter affects the heating and domestic water problem, you will no doubt recall that on May 10th of this year at a meeting held in Colonel Neary's office, you suggested the use of roof water for boiler feed purposes and that our design should be prepared accordingly. It was agreed that this was feasible and since there are two 10,000 gallon capacity concrete storage tanks adjacent to the building, there would appear to be no difficulty in utilizing one of them for the collection and storage of roof water.

J.P.B. Ostrander, Esq.,
Inspector of Indian Agencies,
Regina, Sask.

Until we are assured beyond all doubt that a constant and unfailing source of well or spring water can be made available, we see no advantage in installing costly water softening equipment.

We appreciate and will fully consider any constructive comments offered and are prepared to act on them if after analysis they are considered advisable, but the Contractor will be required, when authorized, to follow the plans and specifications provided by this Service in carrying out the work with due consideration being given to any changes which may be required to overcome structural obstacles encountered during installation.

Your prompt attention with regard to the above would be greatly appreciated.

T.S. Mills,
Chief Engineer.

Memorandum:

DIRECTOR, SURVEYS & ENGINEERING BRANCH

Re: Gordon's Indian Residential School, Punnichy, Sask.

Mr. J.P.B. Ostrander, Inspector of Indian Agencies for Saskatchewan, has forwarded to us copies of his letters of October 20th addressed to your Chief Engineer. We have also received a copy of your letter of October 29th replying to Mr. Ostrander.

We feel that the urgency for having the work done at the earliest possible date if at all feasible must be stressed. We believe that the only possible solution is to have one of the officers from your Ottawa office proceed immediately to the Gordon's School. In this way any changes necessary in the drawings could be made and the arrangements completed for the work to proceed.

There is a heavy expenditure involved and while I feel certain that Mr. Ostrander is anxious to co-operate in every possible way, he has many other duties to perform and lacks the technical knowledge of this particular class of work.

I trust that you will find it possible to carry out this suggestion.

Director.

Punnichy, Saskatchewan.

With reference to Mr. Hoey's memorandum of October 30th, which bears your notation of November 1st, you are advised that our Mr. Hargreaves is leaving tonight for Regina to visit Inspector Ostrander in connection with the above.

The mechanical revisions and all their requirements will be thoroughly discussed with the Inspector and a representative of the firm of contractors, who are preparing an estimate, with the view of obtaining a clear understanding of all matters pertaining to this work.

Following this discussion our officer will proceed to the school, and it is hoped that Mr. Ostrander and a representative of the Wm. George Plumbing Company will find it convenient to accompany him. It is expected that any misconceptions will be made clear, and if the contractors estimate appears to be reasonable there would seem to be no difficulty in having this work started at an early date.

When our officer returns you will be further advised.

November 13, 1947.

TO HIS EXCELLENCY

THE GOVERNOR GENERAL IN COUNCIL

The undersigned has the honour to report:

THAT it is immediately necessary, and funds are provided in the 1947-48 Estimates, Indian Affairs Branch, Department of Mines and Resources, for major repairs to the heating system at the Gordon's Indian Residential School, in the Touchwood Indian Agency, Province of Saskatchewan;

THAT Section 36 of the Public Works Act, Chapter 166, R.S.C. 1927, provides, in part, as follows:

"Whenever any works are to be executed under the direction of any Department of the Government the Minister having charge of such Department shall invite tenders by public advertisement for the execution of such works except in cases (a) of pressing emergency in which delay would be injurious to the public interest .....";

THAT a competent plumbing contracting firm, namely the William George Plumbing Company, of Prince Albert, Saskatchewan, who, our officials state, are very reliable contractors, have agreed to undertake immediately the repairs required to the heating system at the said school on the basis of cost plus fifteen per cent;

THAT the William George Plumbing Company estimate that the total expenditure will vary between thirty-three thousand and forty thousand dollars;

THAT it is considered that the repairs to the heating system at this school constitute a pressing emergency and are within the exception provided in Section 36 above recited, and further, it is considered that the work can be more expeditiously and economically executed as suggested herein.

The undersigned, therefore, recommends that authority be granted for the major repairs required to the heating system at the said school, as outlined above, this being the only arrangement possible at the present time and it being essential that this work be undertaken at once and carried to completion in order that the school may be re-opened in the near future.

Respectfully submitted,

Minister of Mines and Resources.

E. K. D.

Memorandum:

DEPUTY MINISTER

Repairs to plumbing and heating system,
Gordon's Indian Residential School

Attached is a draft Order-in-Council for the granting of a contract for plumbing and heating repairs at the Gordon's Indian Residential School. This school, which has a pupilage of 130, has been closed since the first of July, due to the fact that we were unable to interest a contractor in the repairs necessary to again open this institution. We have had much difficulty at this school, due to the lack of water and also due to the alkalinity of the water when it is available. These salts have corroded the entire heating system. Not only is the boiler completely useless, but the pipes and the radiators are rotted through to a dangerous extent.

When delays occurred in interesting a contractor in this work it was hoped that we could use the old boiler sufficiently to at least keep a little heat in the building and thus prevent frost damage. When Mr. Ostrander, our Inspector of Indian Agencies for Saskatchewan, finally persuaded the William George Plumbing Company of Prince Albert to tender on this work, it was decided to send Mr. Hargreaves of the Surveys and Engineering Branch to Regina, in order to give him technical advice. Mr. Hargreaves has just wired his Branch, informing them that the old boiler is completely useless and that unless a new boiler is obtained at once serious frost damage will result to this valuable school. Mr. Ostrander and Mr. Hargreaves also long distanced our Superintendent of Education on Saturday, urging upon him the necessity of placing an order for a new boiler to be delivered

Indian Affairs. (RG 10, Volume 6310, file 654-5, part 5)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

Library and Archives Canada / Bibliothèque et Archives Canada
www.collectionscanada.gc.ca

within three or four weeks. Pending your approval, they were told to have the William George Plumbing Company place an order for this new boiler.

It is hoped that this order in Council can be proceeded with as expeditiously as possible. Included in our supplementary estimates for 1947-48 is the sum of $34,200.00 which we were advised by our Surveys and Engineering Branch as being necessary for the completion of the work at this school.

Indian Affairs Branch, Dept, Mines & Resources, Ottawa, Ont.

With reference to Department letter 121-1-5 (WT1) dated November 6, 1947 returning my voucher #905 I would advise that this man, Harold Straker, was employed by the Department last winter to look after the pipes and pumps at the lake at the Gordon Indian Residential School, for which he received an amount of $50.00 per month.

The school also hired him to do part-time work and paid him $50.00 a month for this. The School also paid his board.

I therefor think we are liable for half of the unemployment insurance.

I am returning voucher #905 herewith, for your consideration.

Employed 7½ months

Ottawa, November 10, 1947.

TO HIS EXCELLENCY

THE GOVERNOR GENERAL IN COUNCIL

The undersigned has the honour to report:

THAT it is immediately necessary, and funds are provided in the 1947-48 Estimates, Indian Affairs Branch, Department of Mines and Resources, for major repairs to the heating system at the Gordon's Indian Residential School, in the Touchwood Indian Agency, Province of Saskatchewan;

THAT Section 36 of the Public Works Act, Chapter 166, R.S.C. 1927, provides, in part, as follows:

"Whenever any works are to be executed under the direction of any Department of the Government the Minister having charge of such Department shall invite tenders by public advertisement for the execution of such works except in cases (a) of pressing emergency in which delay would be injurious to the public interest ....."

THAT a competent plumbing contracting firm, namely the William George Plumbing Company, of Prince Albert, Saskatchewan, who, our officials state, are very reliable contractors, have agreed to undertake immediately the repairs required to the heating system at the said school on the basis of cost plus fifteen per cent.

THAT it is considered that the repairs to the heating system at this school constitute a pressing emergency and are within the exception provided in Section 36 above recited, and further, it is considered that the work can be more expeditiously and economically executed as suggested herein.

The undersigned, therefore, recommends that authority be granted for the major repairs required to the heating system at the said school, as outlined above, this being the only arrangement possible at the present time and it being essential that this work be undertaken at once and carried to completion in order that the school may be re-opened in the near future.

Respectfully submitted,

Minister of Mines and Resources

Indian Affairs. (RG 10, Volume 6310, file 654-5, part 5)

Records file

Ottawa, November 10, 1947.

Memorandum:

DEPUTY MINISTER

Attached is a draft Order in Council for the granting of a contract for plumbing and heating repairs at the Gordon's Indian Residential School. This school has been closed since the first of ~~September~~ July, due to the fact that we were unable to interest a contractor in the repairs necessary to again open this institution. We have had much difficulty at this school, due to the lack of water and also due to the alkalinity of the water when it is available. These salts have corroded the entire heating system. Not only is the boiler completely useless, but the pipes and the radiators are rotted through to a dangerous extent.

When delays occurred in interesting a contractor in this work it was hoped that we could use the old boiler sufficiently to at least keep a little heat in the building and thus prevent frost damage.

When Mr. Ostrander, our Inspector of Indian Agencies for Saskatchewan, finally persuaded the William George Plumbing Company of Prince Albert to tender on this work, it was decided to send Mr. Hargreaves of the Surveys and Engineering Branch to Regina, in order to give him technical advice.

Mr. Hargreaves has just wired his Branch, informing them that the old boiler is completely useless and that unless a new boiler is obtained at once serious frost damage will result to this valuable school. Mr. Ostrander and Mr. Hargreaves also long distanced our Superintendent of Education on Saturday, urging upon him the necessity of placing an order for a new boiler to be delivered within three or four weeks. Pending your approval, they were told to have the William George Plumbing Company place an order for this new boiler.

Indian Affairs. (RG 10, Volume 6310, file 654-5, part 5)

It is hoped that this order in Council can be proceeded with as expeditiously as possible. Included in our supplementary estimates for 1947-48 is the sum of $35,000.00 which we were advised by our Surveys and Engineering Branch as necessary for the completion of the work at this school.

MEMORANDUM

OTTAWA November 15, 1947.

Re: Gordon's Indian Residential School,
Punnichy, Saskatchewan.

With reference to Mr. Hoey's memorandum of October 30th, bearing Mr. Wardle's notation of November 1st, 1947, in connection with the above, you are advised that our Mr. Hargreaves was sent to Regina on November 3rd in accordance with Mr. Hoey's request.

In brief summary, it could be stated that the difficulties which arose in connection with getting an estimate from the contractor, along with some criticisms brought to our attention by Inspector Ostrander were successfully dealt with, and a complete understanding arrived at.

Enlarging somewhat on the above, a meeting was held at which Mr. Thompson, Resident Architect Dominion Department of Public Works, Mr. Ramage, Heating Engineer from his staff, Mr. Simonson, Proprietor of the Wm. George Plumbing Co. of Prince Albert, Mr. Lunam, a General Contractor, Inspector Ostrander, Mr. Indian Agent Davis and our officer were present.

After a lengthy discussion of the matter, which began immediately after our officer's arrival, it was decided to drive to Punnichy the following morning. Consequently Messrs. Simonson, Ramage, Ostrander, Davis and Hargreaves left Regina at 8.15 a.m. on the 6th instant and after arriving at the school, inspected the boiler room equipment and piping distribution system.

Rapid deterioration had taken place in the boiler, and it was found to be in a very bad state. It was agreed by everyone present that no further repairs could be successfully carried out. Ways and means were discussed at considerable length to determine the best and quickest method of providing temporary heat in order to protect the building from serious frost damage. It was agreed that the most practical solution would be to procure one new boiler immediately along with a new vacuum return line pump and to make essential piping changes, all of which it is felt will provide enough heat for the building to protect it from damage during this winter.

As a result of this discussion, Mr. Hargreaves wired this office requesting immediate authority to instruct Mr. Simonson to proceed along these lines. Mr. Ostrander telephoned Col. Neary, Saturday the 8th instant, and our officer also spoke with him.

Mr. Hoey

Please let me know what further assistance we can render in this matter.

Director.
18/11/47.

R.A. Gibson, Esq.,
Director,
Lands and Development Services Branch,
Department of Mines and Resources,

www.collectionscanada.gc.ca

Our officer succeeded in obtaining a verbal estimate from Mr. Simonson on the basis of the layout designed and specifications prepared by this Service. Mr. Simonson stated that his firm estimated that the cost of this work would be in the neighbourhood of $33,500.00. He also stated that his firm would be prepared to carry it out on the basis of cost plus 15 per cent.

This is considered reasonable. Recent wage increases to plumbers and steam fitters in the province along with certain provincial regulations governing statutory holidays and annual holidays with pay, has increased the contractors' operating overhead expenses approximately 30 per cent.

As a result of this visit our officer reports that he has satisfied himself as to the ability of the Wm. George Plumbing Co. to carry out the renovations if awarded the contract. Inquiries showed that Mr. Simonson is highly thought of in the province and is considered to be very reliable, and in view of the foregoing it is felt that no better arrangement could be made. Incidentally, Inspector Ostrander has been trying since June to get competitive estimates but has not succeeded in interesting any other firm. If this work is awarded to the Wm. George Plumbing Co. at once, it is estimated that it will take from now to the beginning of April before all the equipment and piping can be purchased and delivered to the school. At such time the contractor has agreed, if awarded the work, to provide sufficient staff along with a competent foreman to complete the work in from eight to ten weeks, and that he will give the project his personal attention.

It was arranged with Mr. Mayo, the Acting Principal of the school, to provide board and lodgings for the contractor's workmen and amicable arrangements in connection with board and lodging was arrived at tentatively between Mr. Mayo and Mr. Simonson.

It is our recommendation, therefore, that the work be awarded to the Wm. George Plumbing Co. of Prince Albert, on a cost plus 15 per cent basis. It is further recommended that the contractor be informed as soon as possible that he is to be awarded this work in order that he may start gathering equipment and piping, as well as to make an immediate start on the very urgent repairs necessary to protect the building from frost damage.

Mr. Simonson stated that he would confirm his verbal estimate, by letter to this office, at the earliest possible moment.

F. H. Mills
Chief Engineer.

Dear Mr. Ostrander;

For your information the following is a paragraph of a letter received by the Western Supplies Co. Ltd. from the Canadian Brown Steel Tank Co., " We are pleased to enclose our quotation for 3,500 Brownweld Boiler concerning which we had a discussion over the telephone. As stated we will make delivery in 3 or 4 weeks as, owing to the urgency of the matter, we will give this precedence through our shop".

We are doing our utmost in securing a vacuum pump.

With kindest regards, we are,

Yours truly,

William George & Co.

That it is immediately necessary, and funds are provided in the 1947-48 Estimates, Indian Affairs Branch, Department of Mines and Resources, for major repairs to the heating system at the Gordon's Indian Residential School, in the Touchwood Indian Agency, Province of Saskatchewan;

Department of Mines & Resources Indian Affairs Branch. NOV 29 1947 REGISTERED

That Section 36 of the Public Works Act, Chapter 166, Revised Statutes of Canada, 1927, provides, in part, as follows:

"Whenever any works are to be executed under the direction of any Department of the Government the Minister having charge of such Department shall invite tenders by public advertisement for the execution of such works except in cases (a) of pressing emergency in which delay would be injurious to the public interest .....";

That a competent plumbing contracting firm, namely the William George Plumbing Company, of Prince Albert, Saskatchewan, who, departmental officials state, are very reliable contractors, have agreed to undertake immediately the repairs required to the heating system at the said school on the basis of cost plus fifteen per cent;

That the William George Plumbing Company estimate that the total expenditure will vary between thirty-three thousand and forty thousand dollars;

That it is considered that the repairs to the heating system at this school constitute a pressing emergency and are within the exception provided in Section 36 above recited, and further, it is considered that the work can be more expeditiously and economically executed as suggested herein.

The Committee, therefore, on the recommendation of the Acting Minister of Mines and Resources, advise that authority be granted for the major repairs required to the heating system at the said school, as outlined above, this being the only arrangement possible at the present time and it being essential that this work be undertaken at once and carried to completion in order that the school may be re-opened in the near future.

A. P. Henry.

Clerk of the Privy Council

Mr. R.S. Davis, Indian Agent,
Punnichy, Saskatchewan.

We have your recent letter returning your voucher No. 905 for $9.20 being the amount considered our share of the Unemployment Insurance paid on salary of Harold Straker.

Our records indicate that this amount was paid by us from January 17th to March 31st, 1947.

You state in your letter that you feel we should pay the Unemployment Insurance on the basis of $50.00 a month. Taking into account the amount just mentioned and the period for which he was paid, we feel that the amount of Unemployment Insurance requested is excessive. Please supply a detailed account showing the manner in which the deduction was made.

UNEMPLOYMENT INSURANCE COMMISSION

NATIONAL EMPLOYMENT SERVICE

Yorkton, Sask.,
September 26, 1947.

Fred A Brown,
Dr. [redacted]n,
Gordon Indian Residential School,
PUNNICHY, Sask.

Re: Harold Straker E542-097

The above mentioned filed a complaint in our Regina office relative to Unemployment Insurance contributions not having been made. Mr. Straker indicated that he had been in your employ from December 17, 1946, to July 21, 1947, and received by way of remuneration total of $100 per month.

Provided statements made by the above mentioned are correct, it would be appreciated if you would have forwarded to this office 32 2/6 of 57¢ (class 6) Unemployment Insurance stamps so that same may be credited to the employee concerned.

I should be pleased if you would give this matter your immediate attention, as any undue delay may discriminate against the individual insofar as his rights to Unemployment Insurance benefits are concerned.

Yours truly,

R.C. Panser, Manager,

NATIONAL EMPLOYMENT SERVICE.

PUNNICHY, Sask,
December 29, 1947.

Indian Affairs Branch, Dept, Mines & Resources, Ottawa, Ont.

With reference to Department letter #121-1-5 (WT1) dated December 10th, 1947 regarding voucher #905 for $9.20, being amount charged by the Principal of Gordon School for the Department's share of the unemployment insurance paid on salary of Harold Straker, I beg to advise that I took this matter up with the Principal and he returned me a letter which he had received from the Unemployment Insurance Commission, Yorkton, under date of September 26, 1947, which I enclose.
You will notice that Straker worked from December 17, 1946 to July 21, 1947, but was only working for the Department from December 17, 1946 to April 30, 1947,

The Principal evidently charged the Department with half the cost of the stamps, which was incorrect.

I have prepared a new voucher covering the period that Straker was working for the Department and trust this is now correct.

MEMORANDUM

Re: Water Supply - Gordon's Indian Residential School - Saskatchewan

Referring to the memorandum of October 16, 1947, from Mr. Wardle on the above subject we took up the matter of testing the capacity of the Spring with Mr. Walker and he endeavoured to induce the Indian Agent to do this work. His efforts in the direction of the Indian Agent were unavailing and we now have the following letter from Mr. Walker under date of December 15th:

"In replying to your Airmail letter of the 11th instant with reference to the last paragraph of your Airmail letter of November 14th, re the above, I would advise that on receipt of yours of November 14th, an effort was made to allocate a Junior Engineer to undertake the testing of the spring at Gordon Indian Residential School.

However, at that time it was found impossible to allocate an Engineer to this work. One Junior Engineer was engaged in completing the work at Hobbema whereas all other Engineers were engaged on the Banff Windermere Road Contract.

After having considered the situation, I decided that the said test would be begun on or about the middle of January, 1948.

My intention is, providing weather and other conditions are suitable, to send J.H. Mitchell along with a Junior Engineer to the Gordon Indian Residential School about the middle of January. Mr. Mitchell will remain there for several days - or until such time as the gasoline pump, etc. have been installed and until he has had an opportunity to instruct the Junior Engineer who will remain there, as to duties required. The said Junior Engineer will remain in Saskatchewan for a period of one month or better, depending on conditions and results of testing.

It appears to me that the date as given, namely: the middle of January to the middle of February or longer, is best suited for an actual test of the flow

capacity of the spring in question since at that time it is most unlikely there will be any surface flow which might augment the quantity of water used from the spring.

This matter however, will be kept in mind and arrangements made for the test as stated above."

A test during the winter should give definite information as to whether the Spring is capable of supplying the School during the Winter which is likely to be the critical period but the conditions under which the test will be carried out will be difficult and perhaps expensive.

This will keep your file up-to-date.

MEMORANDUM

Re: Water Supply - Gordon's Indian Residential School - Saskatchewan

Referring to the memorandum of October 16, 1947 from Mr. Wardle on the above subject we took up the matter of testing the capacity of the Spring with Mr. Walker and he endeavoured to induce the Indian Agent to do this work. His efforts in the direction of the Indian Agent were unavailing and we now have the following letter from Mr. Walker under date of December 15th:

Re: Gordon's Indian Residential School.
Punnichy, Saskatchewan.

In connection with Mr. Hoey's memorandum of December 17, 1947, bearing your notations of the 18th instant thereon, you are advised as follows:-

We have written to Mr. Indian Agent Davis informing him of the arrangement which has been made with the William George Plumbing Company and this Department in connection with carrying out the work at the above.

Mr. Davis has been advised that the Contractor must submit all accounts and pay lists in triplicate for his (Mr. Davis's certification) after which they are to be forwarded to Ottawa for approval and payment.

INSPECTOR OF INDIAN AGENCIES

CANADA

DEPARTMENT
OF
MINES AND RESOURCES

INDIAN AFFAIRS BRANCH

File #82-312-11 ACE.

Regina, January 14th, 1948.

Indian Affairs Branch, Department of Mines & Resources, OTTAWA.

I am enclosing herewith Touchwood Agency Voucher No. 24 for the amount of $74.00, in favour of Mr. Dan Sentes, of Punnichy, for making a stoneboat and a snow plow for the Gordon's Indian Residential School.

In explanation of this voucher I have to say that when the information came that the new boiler was about to arrive at Punnichy for the Gordon's School, the road from Punnichy to the school was completely blocked by snow. It was necessary to plow a road at once, and also to use a stoneboat for hauling the boiler. I gave instructions to incur the expenditure shown on this voucher as it was an emergency.

I would therefore recommend that it be paid as submitted.

File #239-312-11 ACE (121)

Regina, February 7th, 1948.

Indian Affairs Branch, Department of Mines & Resources, OTTAWA.

The William George Plumbing Company have not yet commenced work at the Gordon's School. I visited the office of this firm yesterday for the purpose of enquiring as to the reason for the delay. Mr. Simonson informs me that he has been daily expecting a shipment of pipe to arrive in Saskatoon for use at the Gordon's School, but that the pipe had not yet arrived. He does not wish to send a number of men to the school until there is sufficient pipe on the job to keep the men working as he has to pay the men from the time they leave Prince Albert until they return to Prince Albert, which is too costly to him if he has not the material to keep them working.

Dear Colonel Neary:

Gordon's School, Punnichy, Sask.

I have had a report, dated 30th January, from the Principal of the above School and I feel that the following extract will be of interest to you.

"In reply to your letter Jan. 26th re the repairs and etc. here, up to the present there has been nothing done. I have this week two men here from the Banff Department who have come to pump out and test the spring from which they hope to get the water supply from. They are going to pump for a month to see if it holds out and if satisfactory the Engineer says they might be able to start work on it about April. That will take quite a while to do so.

Mr. Davis our Agent here has had an enquiry from Ottawa to know how far the work has gone. Well up to now no move has been made. However, he has been communicating with the contractor who he says is in Winnipeg getting material and was to have been here this week but has not arrived as yet. When they were here in Nov. last they said he would take about four months to complete the job. I cannot see any chance of the work being finished and ready to open school before the fall.

It has been very trying waiting and waiting and no move made all this time. We have not been able to keep the frost out of the extreme ends of the building and the rads and pipes are frozen there. I cannot be held responsible for that as I warned them what would happen with the present set up. It has been quite a trial to keep heat and sufficient water for the boiler and heat in the centre of building, and water for the stock, causing a lot of extra work."

RECEIVED

Indian Affairs Branch, Department Mines & Resources, Ottawa, Ont.

I enclose herewith my Voucher #122 in favor of The Canadian Fairbanks-Morse Company Limited, Saskatoon for a pump which I purchased for Mr. Mitchell, the engineer in charge of the testing of the spring at Gordon's Indian Residential School.

The pump at the school would not work, being worn out, and after trying to use it for three days, it was necessary to get one that would be reliable.

I tried both in Regina and Saskatoon to rent a pump but was unsuccessful.

Mr. Mitchell has been pumping steadily at the spring for three days and is pumping out around 8000 gals in seven hours. The spring is holding up. Goes down about 2 ft 3" in this time and recovers within ten minutes.

An average of around 4000 gals is used a day when the school is in operation, and would be drawn from the well in the 24 hours whereas it is now being taken out in seven hours. They intend to keep up the pumping for at least a month.

It is regretable that this source of water supply was not considered before. I pointed out to them when we first started to have trouble with the water, over three years ago, that I considered this spring would be the solution to our troubles. However, not being an engineer, they would not listen to me. If they had we would have saved a considerable amount of money,

R.S. Davis,
Indian Agent.

Memorandum

Re: Gordon's Indian Residential School,
Punnichy, Saskatchewan

We are in receipt of Mr. Hoey's memorandum of the 19th instant, bearing your notation of the 20th, together with attached copies of letters from Mr. Cook and Mr. Ostrander, with reference to the above.

It is felt that it would in order at this time to briefly review the circumstances in connection with the repairs and revisions projected for this school.

On the occasion of our Mr. Hargreave's visit to Punnichy last November, when he was accompanied by Mr. Simonson, the Contractor, and Inspector Ostrander, it was unanimously agreed that immediate temporary repairs to some of the important return mains be made, together with the installation of one of the new boilers and the new vacuum pump. Mr. Simonson felt that he would able to procure the necessary equipment to carry out this phase of the work.

Consequently, he was authorized to order the boiler and pump at once and to make such repairs to the piping as appeared to be absolutely essential, in order that some heat may be distributed throughout the building to prevent frost damage.

At the same time, the Contractor pointed out that it would take all winter to assemble supplies necessary to carry out the complete work, and that he intended to devote his energies to this end, and felt reasonably sure that such supplies would be on hand by the end of March, at which time he would put a full staff of workmen on the job and carry it through to completion without delay.

We have written to the Contractor several times for a statement of his progress, and his last letter to us, which was dated February 18th, outlined that the supply situation had been most difficult and that he had been keeping in touch with the school through Mr. Davis, the Indian Agent.

The Contractor also stated in his letter that the centre section of the building has been kept heated, and gave assurance that the building had suffered no damage. He concluded by stating that the work would be under full swing on Monday, February 23rd, and that it would continue without delay until completion. While he has made no direct statement to the effect that any work has been done at the school, we have had, up to now, no reason to doubt that the temporary repairs referred to in paragraph three (3) and four (4) have not been executed.

R.A. Gibson, Esq.,

Mr. Ostrander's letter of February 7th and Mr. Cook's letter of February 11th, both addressed to Col. Neary, state that no work of any kind has been done to date. Mr. Cook also states that radiators and pipes have frozen in the extreme ends of the building.

We are writing to the Contractor again and submitting point blank questions in an effort to get a clear understanding as to what has actually taken place. We have a great deal of confidence in the ability and judgment of this Contractor, and feel that he will be able to give assurance that nothing has been neglected in connection with the work.

Upon receipt of his reply you will be further advised.

Indian Agent Davis reports that Mr. Mitchell has been carrying out a pumping test at the spring for three (3) days, and that 8,000 gallons of water is being discharged in seven (7) hours. Also that the water level in the spring goes down about 2'-3" and recovers its level within 10 minutes after the pump has stopped.

It is stated that the average daily consumption of water by the school is about 4,000 gallons, which seems to us to be rather conservative.

Nevertheless, if the present rate of discharge and recovery can be maintained for a period of one (1) month it would appear reasonable to assume that the spring can supply the school with the required amount of water.

When Mr. Mitchell's report is received at the conclusion of his month's test, further comment will be submitted regarding this source of water supply.

F. C. Mills
Chief Engineer.

PUNNICHY, Sask,
Feby 26, 1948.

Indian Affairs Branch, Dept. Mines & Resources, Ottawa, Ont.

In connection with the repair work at the Gordon Indian Residential School, I will require a supply of the new forms I.A. 703, Return of Labor.

Some of these are required immediately and I would be glad if you would send me one by airmail, the balance by regular mail.

There are several Indians hired by The Wm. George Company and I would like to know if it will be necessary to collect Unemployment Insurance from their wages, or if they will come under the special order issued by the Unemployment Insurance Commission No. C-293. If possible, I would rather they did not pay the unemployment insurance.

MEMORANDUM

Re: Gordon's Indian Residential School.
Punnichy, Saskatchewan.

Further to our memorandum of February 25th in connection with the above, you are advised that we are in receipt of a letter from the William George Plumbing Company who are the contractors for the above work.

We are satisfied that the contractor has conscientiously done everything possible in the interest of this school. Equipment and piping have been in very short supply, particularly in the West, and it is only through the contractors wide business connection that he has been able to finally assemble enough material to make a start.

To date, one of the new heating boilers has been installed along with the new vacuum pump; and some radiators have been connected up temporarily.. Part of the staff started work on February 23rd when enough materials had been delivered to the school to make it worth while. The contractor put a night fireman on duty to ensure that there would be no further interruption in the supply of heat.

While it is true that some radiators and pipes have been frozen, the contractor states that Mr. Mayo the Principal of the school, informed him that fewer freeze-ups took place this winter than the previous one. This is due in part to the fact that it has been possible to keep all interior doors open, as the school children are not present. Also, under the contractors direction, the old boiler was carefully nursed along by the school staff, and the contractor gives full credit to them for their co-operation. He also states definitely that no damage to the plaster has occurred.

There is still a critical shortage of pipe required for the job, but promise of delivery has been expected and if fulfilled the contractor expects that the work can be completed by the end of May, provided also that the high pressure boiler is delivered on the date promised.

It is no surprise to this Division that some radiators and pipes have frozen, as our inspection revealed them to be badly clogged, particularly at the ends of the building. The original system was not installed in such a manner as to provide good drainage, and with the scaling of the pipes caused in part by hard water and mediocre maintenance efforts by previously employed boiler room staff, such a state of affairs was bound to develop.

We would like once more to reiterate our confidence in the William George Plumbing Company. We have every reason to feel that they have left no stone unturned in making every effort to get ahead with this work. As additional supplies are received they will put more men on the job in order to hasten the date of completion.

It is felt that the contents of this memorandum should reassure Mr. Hoey that everything possible is being done in the interest of the job, and should enable him to deal with the criticism as received from Mr. Cook, Superintendent, M.S.C.C.

Vote 516-12-415 Enc. No. 960

This is to advise that it will be necessary to increase the second item on the above purchase order from $191.27 to $252.10. In checking the quotation, the price of the Horizontal Hot Water Tank should have read $244.92 plus a further increase covered by escalator clause at time of quoting thus making the new total $252.10. An invoice dated December 22nd, 1947, for this amount has now been received from Crane, Limited, 93 Lombard Street, Winnipeg, Manitoba.

MEMORANDUM:

Re: Gordon's Indian Residential
School, Punnichy, Sask.

attch. You are advised that we are in receipt of a letter from Mr. Indian Agent Davis, to which is attached a letter from Mr. Mayo, the principal of the School, with reference to a stoker for one of the boilers now being installed. Copies of these letters are attached hereto for your information.

Our Mr. Hargreaves is leaving Ottawa on March 30th for a visit to the above, and it is felt advisable to defer our recommendation in this connection until his return.

T. S. Mills, Esq.,
Chief Engineer,
Lands and Development Branch,
Ottawa, Ont.

Dear Mr. Mills:--

I am enclosing herewith a letter from Mr. Mayo the Principal of Gordons School requesting that a stoker be put in for the use of one of the boilers, also that the floor be repaired.

These boilers are a little short for the use of wood, however they could use coal and fire them by hand, the floors while not of the best, will last as they are for a number of years.

The work at the school is going along nicely, and will make a full report to you within a day or two, this had been held up as Mr. Simminson took ill last week and had to return to Prince Albert, however he will be back on the job tomorrow.

Yours truly,

(sgd) R. S. Davis

C O P Y

GORDON'S (ANGLICAN) INDIAN RESIDENTIAL SCHOOL

All Communications to be
Addressed to the
Principal

March 8th, 1948.

Dear Sir:

In talking to the contractor re boilers being installed in our school. He strongly recommends getting a stoker for one boiler. These boilers are wood burning boilers and will only take a short length of wood. bare tree feet. further more he says considerable damage might be done to boilers in throwing in heavy wood.

The north west floor in girls playroom is in a very poor condition having been broken up in places to get at sewer pipes and then not finished off again and the rest of the floor is worn very rough and impossible to keep clean, so many cracks to fill with dirt. Now we have the men and machinery around here will it be possible to have this done. Would mininize the cost if done now.

Will you please take this up with The Dept. and see if they will sanction these extra items and oblige.

Yoursfaithfully,

(sgd) Fred A. Mayo.

AIR MAIL

File #637-312-11 ARC. (121)

Regina, March 27th, 1948.

Indian Affairs Branch, Department of Mines & Resources, OTTAWA.

Attention of Mr. Neary

With reference to your Army signal of March 22nd, acknowledging my message advising of the sudden death of Mr. Chris Simonson, sole owner of the William George Plumbing Company, Limited, of Prince Albert,-Mr. R.S. Davis, Indian Agent, Touchwood Agency, and the writer, proceeded to Prince Albert immediately after the death of Mr. Simonson, in order to endeavour to arrange that the work at the Gordon's School would continue without interruption, and that as much as possible of the expenditure be accounted for and paid from the current year's Appropriation.

The necessary vouchers and reports are being forwarded direct to the Department by Mr. Davis at once, and I am enclosing herewith a letter handed to me by Mr. N.O. Grosser, of Prince Albert, who has been appointed executor of the estate of the late Mr. Simonson, and General Manager of the William George Plumbing Company, Limited.

There seems no doubt whatever that the work will continue under good management and good supervision as Mr. Grosser is a very substantial business-man, with a high financial rating, and he has assumed full responsibility (from his own funds, if necessary, for temporary financing), to carry out the work without interruption.

We are fortunate that Mr. J. Ramage, of the Department of Public Works, also discussed all matters with those of us concerned at Prince Albert, and he has given us great assistance. We are also fortunate that the late Mr. Simonson left a will placing responsibility upon Mr. N.O. Grosser, an old friend of Mr. Simonson's and a man of high repute and good financial standing, who will do everything to have the work carried out to the satisfaction of both the Department and the estate.

It would certainly be of some assistance to us if Mr. Hargreaves could find it convenient to visit the Gordon's School. If he is able to do so, and advises me, I shall arrange to meet him there. However, if it is impossible for

Mr. Hargreaves to make the trip, I have... ..

Memorandum:

Re: Gordon's Indian Residential School
Punnichy, Saskatchewan.

Further to our memorandum of March 23rd you are advised that our Mr. Hargreaves has returned from a visit to the above school, and it is felt advisable to submit a complete report outlining the situation there.

As you are aware, Mr. Christian Simonson, the sole owner of the William George Plumbing Company of Prince Albert, with whom the Department had a Contract Agreement, died suddenly at the school on March 21st. Previous to his death he had requested the Chief Engineer to send Mr. Hargreaves to Punnichy to inspect the work already carried out and to consult with him in connection with the shortage of materials which he felt was delaying the work.

In the interests of the Department, our Officer was instructed to obtain all information relative to any arrangements which may have been made by the William George Plumbing Company to carry on with the work, and to advise the Department if such arrangements appeared to be satisfactory. As a result of his visit, the following summary of affairs as he found them is outlined below.

The late Mr. Simonson had drawn up a will leaving all to his wife and appointing her as executrix with a provision added, appointing his close friend, Mr. Nelson Grosser of Prince Albert as executor in the event of Mrs. Simonson's demise.

Within a short time after Mr. Simonson's death Mr. Grosser offered his full support to enable Mrs. Simonson to complete any and all outstanding commitments made by the William George Plumbing Company.

She expressed a desire to carry on with the work at the Gordon School, subject of course to the approval of the Department and immediately called Mr. Grosser into consultation to obtain his advice.

Mr. Grosser immediately consulted with the Bank of Nova Scotia of Prince Albert who had been given Power of Attorney by the late Contractor, and he at once deposited the sum of $15,000.00 to cover any outstanding accounts against the William George Plumbing Company. At the request of Mrs. Simonson he assumed active management of the Company and upon learning of our Officer's visit to the job, immediately sent a foreman to the school to take charge of further operations, and came down himself for a full discussion.

Mr. Hoey - For your information.
17/4/48.

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

Library and Archives Canada / Bibliothèque et Archives Canada
www.collectionscanada.gc.ca

Our Officer reports that he is satisfied with the work carried out to date and estimates that it is approximately one-third complete. The new Foreman has been continuously employed by the William George Company for over 16 years and in our Officer's opinion is fully qualified and competent. This opinion was arrived at following a full two days discussion between the Foreman and our Representative.

Our Officer requested Mr. Grosser to have a document drawn up and legally attested to the effect that he was assuming all financial responsibility and direction of the William George Plumbing Company's affairs. This he promised to do as soon as he returned to Prince Albert and it is expected that this document will be forwarded to the Department shortly.

After thoroughly considering and reviewing the entire project on the job, it is recommended that the William George Plumbing Company should be allowed to carry out the balance of the work at the school. The Foreman and Mechanics now on the job were carefully sized up and examined by our Officer who states they are all men of wide experience in the class of work now being executed. It is also felt that Mr. Grosser is in a very favourable position with regard to obtaining the balance of supplies necessary, as he is well known and has a wide connection in the West.

Messrs Salter and Frith, Barristers and Solicitors, have provided us with a copy of the late Mr. Simonson's will and have advised that we can obtain full information regarding Mr. Grosser's financial standing and business ability from the legal branch of the Bank of Nova Scotia.

In conclusion we estimate that the job will be completed about the end of June or early in July, at which time it is contemplated sending our Heating Engineer to make an inspection before the final certificates are paid. It is also felt that the Indian Affairs Branch should be appraised of the contents of this memorandum.

MEMORANDUM

Re: Gordon's Indian Residential School,
Punnichy, Saskatchewan.

Further to our memorandum of March 23rd with reference to the above, you are advised as follows:-

Our heating engineer on his recent visit to the school, investigated the possibility of using stokers in connection with the new boilers now being installed.

It was learned that lignite coal could be procured without difficulty for the heating plant, but owing to the fact that the present electric generating equipment is overloaded, it would not be advisable to install the stokers at the present time, as there would be approximately an additional two to three horsepower electrical capacity required to operate the stokers.

However, if the electric generating plant is brought up to date, stokers could be added later, as the type of boilers now being installed have been arranged to receive underfeed stokers without disturbing the present layout.

Dear Archdeacon Cook:

Re: General Repairs and Maintenance -
Gordon's Indian Residential School.

I have your letter of the 10th instant, file Est. 48-49, enclosing requisitions received from the principal of the above school.

Last September the Indian Agent forwarded us a requisition for 1,000 ft. of rough lumber, 200 lbs. of nails and 1 barrel of coal tar, which he stated was required at the Gordon's Indian Residential School. We issued purchase order 23009 to the North American Lumber and Supply Co., on September 19th but apparently the materials have not been supplied as we received no account.

We do not appear to have received a requisition for the items contained on your second list.

We are submitting both of these to the Indian Agent and when we receive his reply will give the matter further consideration.

Yours sincerely,

Bernard F. Neary
Superintendent of Education.

Ven. Archdeacon H.G. Cook,
Superintendent,
Indian School Administration,
M.S.C.C., O t t a w a.

121-1-5 (E.1)

April 22, 1948.

Mr. R.S. Davis, Indian Agent,
Punnichy, Saskatchewan.

Enclosed are to requisitions which have been forwarded to us by the Superintendent of the M.S.C.C. in connection with the Gordon's Residential School.

As you are aware, we issued purchase order 23009 on September 19th, 1947. One item on this purchase order was 1,000 ft. of rough lumber. You will note from the attached that they apparently require 5,000 ft. We have not received any account for the items ordered on purchase order 23009 and, therefore, presume that they have not been supplied. Do you consider that 5,000 ft. is required and can it be secured from the North American Lumber and Supply Company and at what price?

With reference to the second requisition, I would refer you to our letter of August 11th, 1947 in which we expressed the opinion that it was inadvisable to expend funds at that time in painting to outbuildings at Gordon's School.

Do you consider that it is advisable to supply the articles requested on list No. 2? If so, I would appreciate it if you would forward a new requisition and at the same time state if any of the items can be secured locally and at what price. In the event of your stating prices, you should give the name and address of the firm from whom the prices were obtained.

Bernard F. Neary
Superintendent of Education.

Memorandum:

DIRECTOR, LANDS and DEVELOPMENT SERVICES BRANCH

Gordons Indian Residential School, Punnichy, Sask.

Reference your I.A. 1580-4 of April 13 -

We have noted the contents of Mr. Mills' memorandum concerning the above Residential School and the arrangements made with the William George Plumbing Company in order to implement the contract previously let for heating repairs.

We concur in the recommendations made by your Chief Engineer. It is presumed that we will be advised in due course as to the amount which will have to be included in our Supplementary Estimates for the completion of the repairs at this school. As you are probably aware, no funds were provided in a revote for the work at this institution. At the time our Main Estimates were prepared in November last, it was anticipated that work on this contract would have been completed by March 31, 1948.

Memorandum

Re: Water Supply - Gordon's I.R. School
Saskatchewan.

Referring to the instructions received from Mr. Wardle under date of October 16th, 1947, we have now received a report from Mr. Cornish dated April 9th with final report by Mr. Robinson dated March 22nd giving the results of a pumping test made of the spring situated 1¼ miles south-east of the Gordon Indian School.

Attached herewith you will find duplicate copies of the report from Mr. Cornish and the final report from Mr. Robinson with attached blueprints showing recovery of water level and the elevation of water table in connection with this pumping test. You will note that Mr. Cornish gives us a favourable report but we should remember that the test only took place between February 4th and March 17th and we have no definite indication as to what the results might have been had we been able to test the spring over a period of three months during the winter.

Department of Mines & Resources
Indian Affairs Branch
APR 28 19[illegible]
REGISTERED

On March 14th the weather changed and there was indication that very soon the snow would melt and that water would then find its way into the spring from the surface of the ground, thereby interfering with any further accurate test of the capacity of the spring.

The results of the test are certainly more favourable than we anticipated but we still think that the attached reports are just a trifle optimistic. We have written to Mr. Cornish to secure a final recommendation for this job with an up-to-date estimate of cost in connection with the proposal to pipe the water from the spring into the school.

Also attached herewith in duplicate is a water analysis of a sample taken at the end of the pumping test when the water table was at a low point. You will note that the water is hard and the total solids are high although perhaps not too high, and iron is present in the proportion of 3.5 parts per million. There is also a remark on the analysis to the effect that the water has a decided odour due to sulphur gas.

F. C. Mills
Chief Engineer.

(COPY) EM

E.5-3(S)

Banff, Alberta.
April 9th, 1948.

Dear Sir,- Re: Water Supply, Gordon's Indian School, Punnichy, Sask.

I have reviewed Mr. Robinson's weekly reports on the pumping tests made at the spring well one and a quarter miles southeast of the Gordon's Indian School, and I am of the opinion that if a reservoir of say 10,000 gallon capacity were constructed at the site of the spring, an intermittent discharge of approximately 10,000 gals per day would be available from this source during the winter months for a drawdown of one (1) foot below depressed water table that would be established after the pipeline was installed and the spring had assumed its level of equilibrium from the heavy drain of pumping that would be necessary during the excavation of the spring reservoir. The opinion is based, primarily, on the pump test made from the 1st of March to the 17th, when operations were closed down.

For convenience and study of the result of the pumping test I have prepared a chart of the drawdown and water table readings reduced to the assumed elevation established by Mr. Lyons, and used by me in making the preliminary surveys last June. From this Chart, blue-prints of which are attached, it will be noted that during the first twenty-eight days of the test, while pumping at the rate of 20, 15, 12 and 10 gals per minute, for a period of approximately seven (7) hours each day, recovery steadily declined, and water table was lowered from elevation 125.21 to elevation 123.16, a lowering of the water table 2.05 feet. Continued pumping during the next fifteen days, at 10 g.p.m. recovery was maintained at this elevation, which would indicate that the spring had reached a point of equilibrium for a discharge of approximately 4200 gals for seven (7) hours pumping for a depressed drawdown of approximately one (1) foot.

On the recovery chart, blue-print of which is attached, it will be noted that after the pump was cut on February 8th the recovery was 7/10ths of one foot during the first hour; February 12th was .67 tenths of one foot; February 16 to March 3rd the recovery was slightly over .6 tenths of one foot and that, during the last fourteen days of the test was consistently .65 tenths of one foot in one hour. The recovery during the first five minutes after the pump was cut, during the early stages of the test averaged about..275 tenths of a foot, whereas after the discharge was cut to 10 g.p.m. the recovery during the first five minutes was .30 tenths of a foot. This compares very favourably with the test made in June 1947 when recovery was .40 tenths during the first five minutes. The exact time of full recovery was not clocked. However, the extension of the curve shown for March 4th to March 17th would indicate that total recovery to water table elevation 123.16 would probably be reached in six to seven hours after the pump was cut.

T. S. Mills, Esq.,
Chief Engineer,
Engineering & Construction Division,
Department of Mines and Resources,
Ottawa, Ontario.

If we assume .....

Indian Affairs. (RG 10, Volume 6310, file 654-5, part 5)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

Library and Archives Canada / Bibliothèque et Archives Canada
www.collectionscanada.gc.ca

If we assume that static water table was attained during the last fifteen days of the test for a discharge of 10 gals. per minute and a draw down of approximately one foot, it would appear that the spring could be pumped intermittently two times per twenty-four hours at least for a discharge of approximately 7200 gals. As it is proposed to install a three or four inch gravity pipeline and a 10,000 gal storage at the springs from which the school's present daily requirements of 6,000 gals can be drawn, this volume of water could be discharged at the school tank at the rate of 16 or 35½ gal. per minute, depending on size of pipe installed, and if the drawdown reached the elevation 122.21 established during the present test, which is slightly over 8 feet above the water level to be maintained at the school tanks.

If we use a pipeline of 3" diameter, the 6,000 gals. could be delivered at the school tank in six hours and fifteen minutes, whereas by using a 4" line this amount of water could be delivered in approximately three hours. The longer periods between the discharge of 6,000 gals at the school would permit of the unused 1200 gals that the area is capable of producing to build up and gradually raise the water table, thus producing a larger storage in the gravel, thereby increasing the inflow to probably 10,000 gals per day during the winter months. Generally most springs are affected by surface precipitation during the summer months and as this was evidenced from last summer's test, it would appear that the spring is capable of supplying the school's present requirement of at least 6,000 gals per day for a drawdown that will not impare the head necessary to transport the water by gravity to the school.

Yours faithfully,

C. R. Cornish,
Supervising Engineer.

FINAL REPORT - PUMPING TESTS - GORDON INDIAN SCHOOL
PUNNICHY, SASKATCHEWAN.

Test Procedure: The general procedure was as follows:-

A tent and stove were placed at the well, and a 1½" London Centrifugal Pump was set up over the well connected to about seven feet of two inch suction pipe and 175 feet of 2½" discharge pipe. All the piping was arranged so that it was possible to drain the entire assembly at the end of each day's pumping.

The water level in the well was recorded before the test began, and this was used as a datum at assumed elevation 125.21. The pump was then operated at from ten (10) to twenty (20) gallons per minute, five to seven hours per day for the test period of six weeks. Detailed figures of each day's discharge have been given in the various weekly reports. Readings were taken of water level each morning, average drawdown, discharge; and recovery of water level for periods up to one hour after the pump was stopped.

Discharge was checked periodically by noting the time taken to fill a forty-five (45) gallon drum; and a graph showing typical rates of recovery is attached.

Temperature and weather readings were also included in the weekly reports.

Conclusions:

1. During the test period approximately 238,000 gallons were pumped from the spring, and the static water level was lowered 2.05 feet below datum. This would appear to be sufficient water to serve the school for about two months.

2. In spite of the erratic conditions of pumping at 10 g.p.m., it is felt that a continued flow of at least 10 g.p.m. is available. There was no evidence of recirculation, and as the ground was frozen solidly, all the water pumped must have come from storage in the gravel bed.

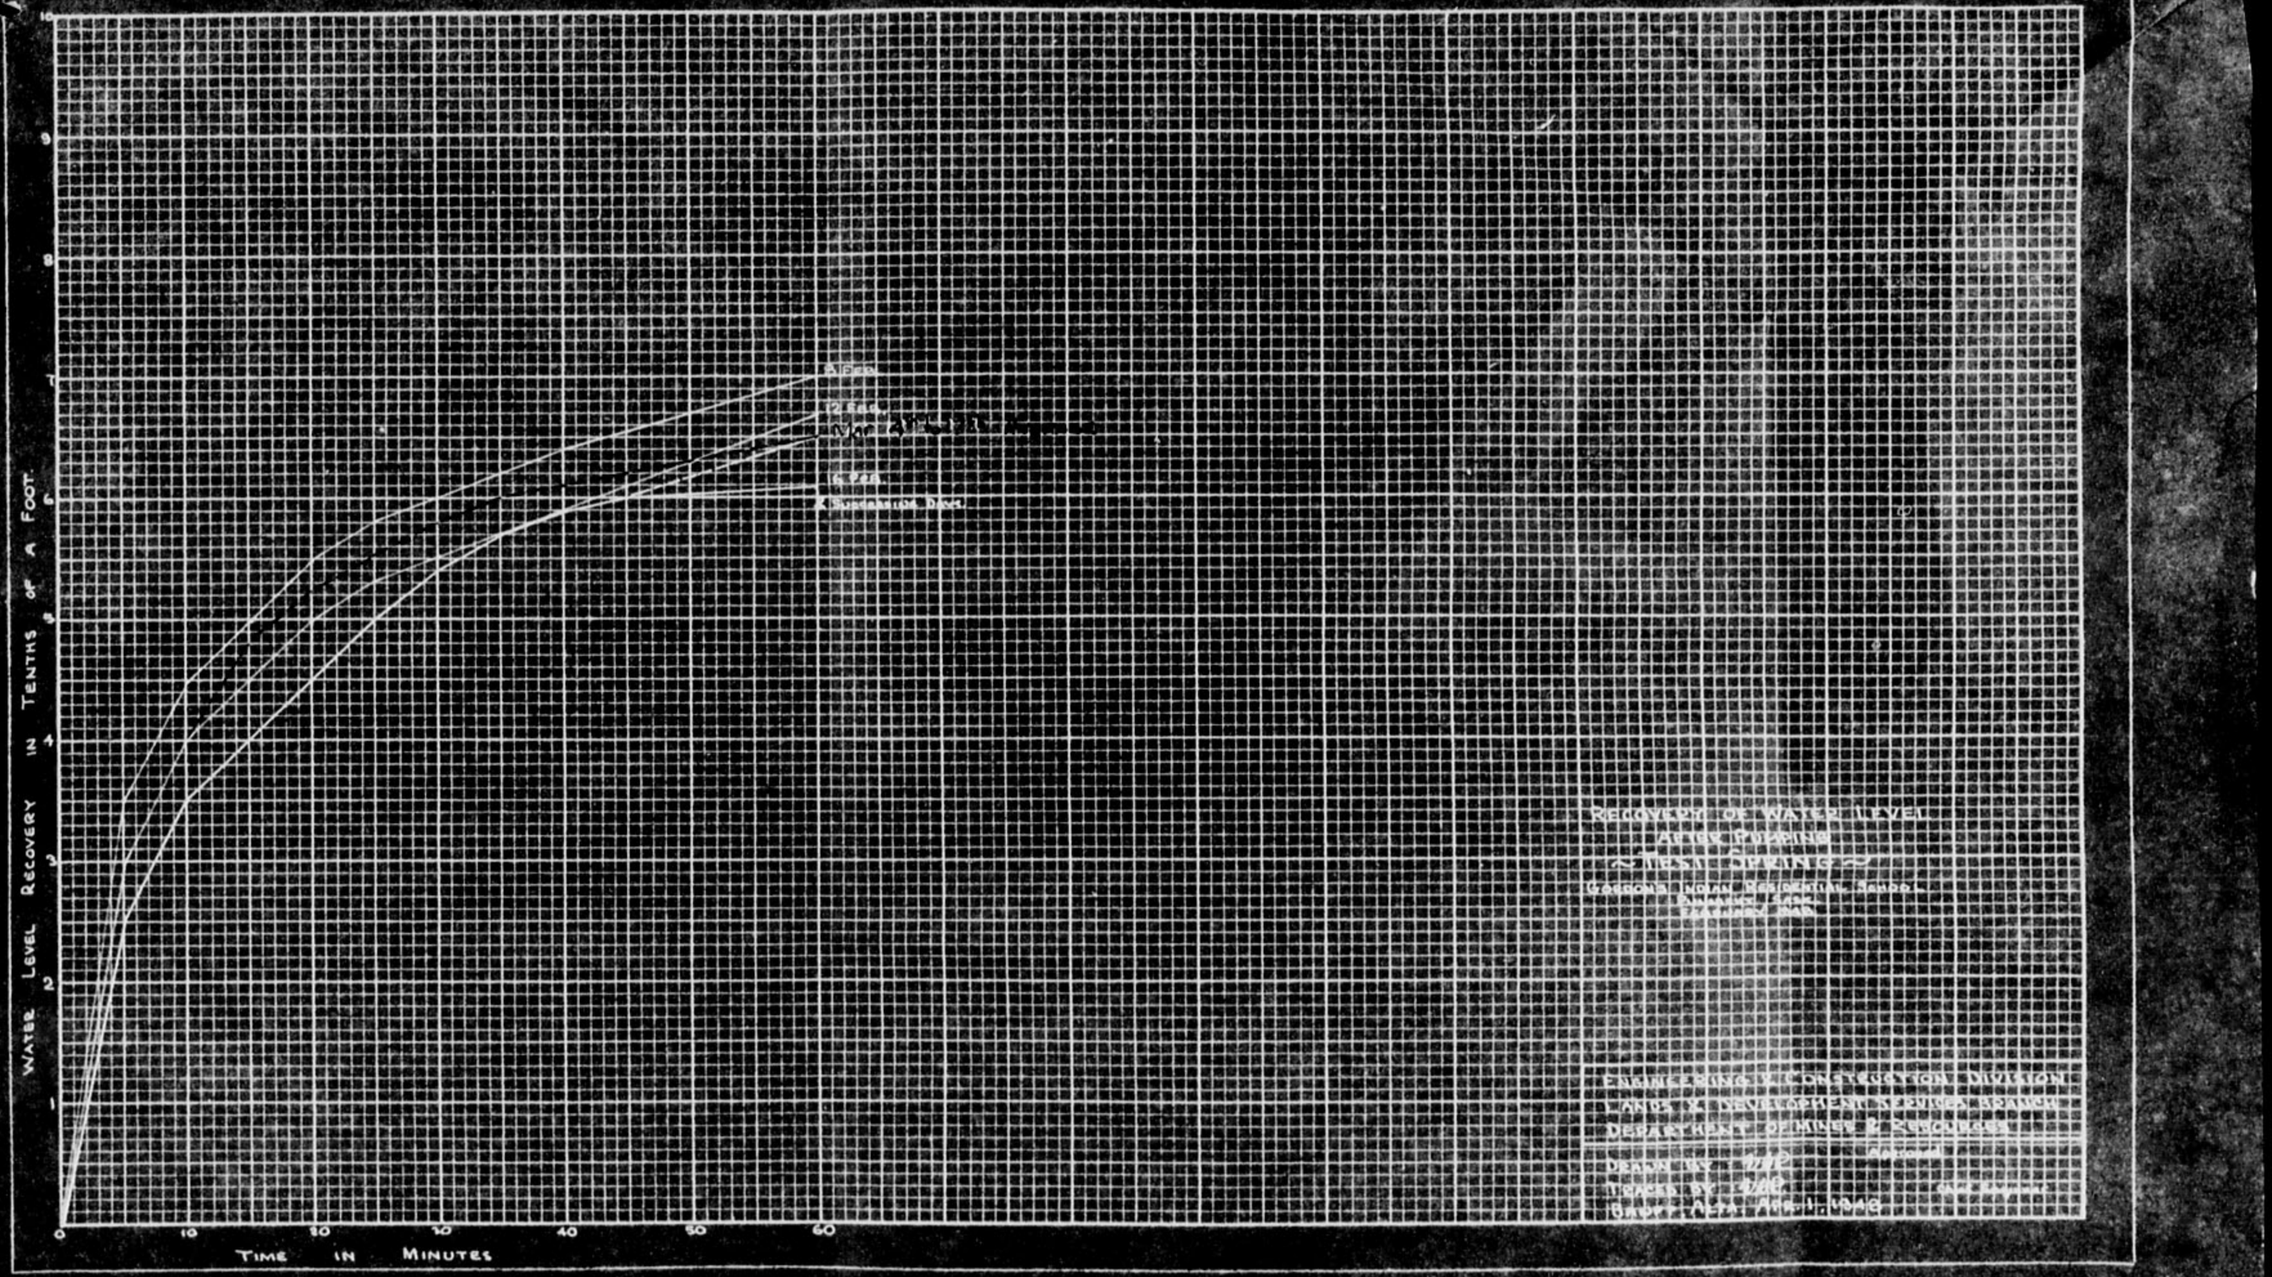

3. These tests appear to show that sufficient water is available in the spring to supply from four thousand to six thousand (4,000 to 6,000) gallons per day during the winter season, and hence that the school's present water requirements could be filled from it.

Memorandum:

DIRECTOR, LANDS and DEVELOPMENT SERVICES BRANCH.

Water Supply, Gordons Indian Residential School

Reference - I.A. 1580-4 of April 27 -

Mr. Mills' report upon the water supply at the above Indian Residential School has received consideration here.

It would seem that an expenditure of some $24,000.00 will be required in order to provide an adequate source of water for this school. This was the amount quoted in your previous memorandum of July 1947, based upon the obtaining of water from the springs and the construction of a 10,000 gallon water reservoir.

We have no funds available in this year's Vote for the construction of such a water supply system, but we are prepared to consider a recommendation from you that such a project is a definite necessity for the maintenance of this school.

Indian Affairs Branch, Department Mines & Resources, Ottawa, Ont.

With reference to your letter #121-1-5 (E.1) dated April 22, 1948, regarding the requisitions of the M.S.C.C. in connection with Gordon Indian Residential School , I am enclosing herewith a requisition for material and labor which I consider will be necessary to repair the root house. This building is 56 foot long and 28 feet wide. The roof will have to be replaced, also the stringers.

With reference to the purchase order #23009 dated September 19, 1947, these goods were never supplied.

With reference to the second requisition mentioned in your letter, I have received a request from Mr. Mayo for paint and painting of the out buildings. While these buildings could stand painting, I don't feel we should go to the expense this year as we are spending a very large amount of money on the school in the nature of plumbing and building on the engine room. Therefor I feel that this could wait until next year.

With regard to materail requested for Manual Training, there is lots of time for them to request this when the school gets going and they have a man to teach it. If we supply it now it will be used for other things before they are ready to teach manual training. The amount of $60.00 requested for glass will be necessary and I would recommend that this amount be considered, therefor I am enclosing a requisition for this.

R.S.Davis,
Superintendent

Mr. R.S. Davis, Superintendent,
Indian Agency, Punnichy, Sask.

With reference to your letter of the 6th instant, the Department approves an expenditure of $60.00 for glass of various sizes to repair the root house at the Gordon's School. You may purchase this locally.

The other items on your requisition have been referred to the Departmental Purchasing Agent.

The Department concurs with the statements made in the third and fourth paragraphs of your letter. You may advise the principal that we are not prepared to take any action in that particular regard at the present time.

Philip Phelan
Chief, Training Division.

Memorandum:

Re: Water Supply, Gordon's Indian Residential School.

In reply to head office letter dated April 15th, your File I.A. 1580-4, with reference to the pumping tests for a water supply for the Gordon Indian Residential School, etc., I would advise that the reference to a 3" and 4" gravity pipeline in my report on the review of the pumping test was merely to indicate the advantages between the use of a four inch pipe. Personally I would recommend the placement of a 4" main and as a wood stave pipe would be less costly than using either galvanized iron pipe or cast iron pipe, would reduce this cost considerably, and if carefully installed and maintained, would meet the requirements of the proposed low pressure main satisfactorily. Cast iron fittings can be supplied to connect all gate valves, tees and fittings to the wood stave pipe.

I attach a revised estimate of cost and a material list to cover the proposed installation. Excavation quantities have been reduced as advantage of lower ground can be taken to reduce cuts than that on which the traverse line was surveyed. Further if the trenching and grading is done by machine and bulldozer, considerable saving might be effected.

In view that the water level at the spring reservoir is close to the surface I have indicated on the blue-print attached that the top of the cribbing be covered by flooring and insulated, also that the walls and roof of the housing be insulated, and it is probable that during the winter months provision may be necessary to keep the interior above freezing point. At the commencement of the tests made in February and March it was necessary to cut a hole through 6" to8" of ice before the test could be started and after the close of each day's test about 2" of ice formed over night. The insulation provided will prevent this to some extent, but in extremely cold weather it may be necessary to assist the insulation provided by using artificial heat to ward off the extreme temperatures.

I attach copies of recent quotations on wood stave pipe, received from the Canadian Wood Pipe and Tank Limited, Vancouver. Also quotation on Galvanized Iron Pipe and B.I.P, also Cast Iron Pipe from Crane Limites, Calgary. These quotations would indicate that 4" wood stave pipe can be laid down at Punnichy for about $88.00 per 100 ft. with delivery in about four months, and C.I.P. Bell and Spigot at $130.00 per 100 ft., with delivery in six to eight months; 4" galvanized and black iron pipe would be cheaper than the cast iron, and slightly dearer than the wood stave. However, delivery is indefinite on steel pipe and cast iron would not be available until next fall, in view of which it would appear that necessity leaves us with only one choice, that is - wood stave pipe.

Cost installed of wood stave pipe would run $1.10 to $1.20 per foot, whereas cast iron would be about $2.00. Excavation and back-filling has been provided for in the estimate attached hereto. In ordering valves, etcetera provide for type of pipe used.

T. S. Mills, Esq.,

Memorandum

Re: Water Supply, Residential School, Gordon's Indian Reserve, Saskatchewan.

Further to our memorandum of April 26th and in reply to your notation on copy of a memorandum from Indian Affairs, dated April 30th, 1948, we are in receipt of a report from Mr. Mitchell, dated April 27th, duplicate copies of which are attached herewith.

You will note the recommendation is for the installation of a 4 inch diameter wood stave pipe from the spring to the school. As the water from the spring is mineralized and alkaline, metal pipe would no doubt after installation deteriorate in carrying capacity due to incrustation, so that the effective life of metal pipe might not exceed that of wood stave pipe. Minerals and chemicals in the water should not affect the carrying capacity of the wood stave pipe to any noticeable extent, and as wood stave pipe is cheaper and delivery more definite, its use is recommended. However, it should be borne in mind that any type of pipe will need maintenance to keep it in good condition, and where the available head and quantity of water is so small, leaks which are allowed to develop might interfere seriously with the delivery of water to the school.

It is quite possible that at the end of a winter, the consumption of water at the school might have to be controlled and rationed so as not to exceed the winter delivery from the spring and this will be especially necessary if leaks develop along the pipe line which are not properly repaired.

You will note the cost of putting the water into the school is estimated at $24,000.00. This cost does not include any expense necessary for softening the water for the laundry if used for that purpose, nor for chlorination which will be needed.

It is presumed that present equipment and arrangements for distributing the water within the school, will be continued as heretofor, and the estimate does not include any changes in this equipment that might later be found necessary.

Whether this new source of water will prove satisfactory for the requirements of the school, can only be determined after the system has been installed. Water obtained within a few feet of the surface of the ground is always liable to fluctuations in quantity due to precipitation and lack of precipitation in the immediate vicinity and might also be subject to reduction of flow, if the underground reservoir should be tapped by other users.

R.A. Gibson, Esq.,
Director,
Lands & Development Services Branch,
Department of Mines & Resources,
O t t a w a.

Indian Affairs. (RG 10, Volume 6310, file 654-5, part 5)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

Library and Archives Canada / Bibliothèque et Archives Canada
www.collectionscanada.gc.ca

This latter contingency could perhaps be guarded against on the reserve and prevented.

If Indian Affairs consider that the cost of this work is justified in order to be able to operate the school, then $30,000.00 should be provided. The cost of the work will depend on the amount of the bid received from the contractor and on the manner in which it is proposed to handle the contract, that is whether on unit cost or cost plus fixed fee basis. There will be some delay before work can start and as prices are advancing it seems wise to figure on an additional cost of $6,000.00 over and above the estimate of Mr. Mitchell.

Recent press reports indicate that very heavy precipitation has taken place on the Prairies this Spring, and it might be that the Water Supply Lake has returned, or has partially returned, to its former level and might now contain sufficient water of a satisfactory quality for domestic purposes at the school.

T.S. Mills,
Chief Engineer.

Memorandum:

DIRECTOR, LANDS & DEVELOPMENT SERVICES

Re: Water Supply - Gordon's Indian Residential School.

We have received your memorandum of May 14th regarding the above.

The cost of the proposed water supply appears high but no doubt your engineers have surveyed all the possibilities and this is the only one that appears feasible at the present time.

It is our intention to include the amount in our supplementary estimates but at the present time I am not in a position to advise you if the amount will be allowed.

Director.

COPY OF LETTER.

Dear Sir;

As per your request I am herewith submitting a report on the condition of Witte Deisle engine that recently burnt out a rod bearing. in spite of the fact that the sump was full of good clean oil.

Upon examination I found the crank case dry of oil and the babbitt on con rod entirely burned out. Checking further after starting engine (after new bearing was installed) I found the oil pump refused to pump and I had to prime same before it would function. Its opreating very erratic. in that the presure would vary from 0 to 30 lbs presseure.

It would appear to me that the pump or oiling system was at fault. I reccommend that this engine be throughly checked so as to assertuan the reason for failure of oiling system. I understand this is the second time that this has happened with oil sump full of oil.

I have also reason to believe that the cyl and rings are scored from lack of oil as I noticed quite a bit of blow-by coming from the breather screen.

In veiw of all this I warn you against running this engine until such timeas it has been overhauled bu a competent mechanic.

Yours very truly.

LARSON & RICHMOND.

I am writing you at the suggestion of Mr. A. Hargreves.

I wrote this report some weeks ago and gave it to Mr Davis our then Agent to forward. As you may know he has been transfed and it seems has not reached Ottawa.

It is in connection with our engine for lighting plant. The Witte Deisle Engine which was installed last year has been less than useless to us. we have not been able to run it two weeks at a time without trouble. Twice the main bearing has burnt out. The first time I obtained new babbitt bearing and put them in. after running a little while the same thing happened again. I then called in a competent mechanic from town and had him put in new bearings and chack the engin over. I am enclosing you a copy of report I got him to give me. for your inspection.

ext 1.

I also had Mr Grosser who is Exoutive for late Mr Simonson of The Wm George Company who is doing the Boiler and plumbing work at school and was down here in connection with that He is also owner and head of The Beaver Machinery Co and a throughly practical man. look the engine over. He says the engine is a war product and pporly built and quite inadequate to carry the load we have to carry and will never be satisfactory. It is twalve H.P. and we should have a twenty H.P. engine to carry the load and motors we have to use here.

Our old Lister plant our stand by is getting much the worse for wear and that is only fourteen H. P. We are going to be in apoor fix when we open school unless we can get the right engine put in. Hope you will be able to put this before The Indian Affairs Bar Branch and help us .

Yours faithfully;

Fred. A. Lucas O.

Purchase Order No. 15007 -
Gordon's Indian Residential School.

You will recall that we placed an order with you in December, 1946, for a Witte Model H.D. 27, 12 H.P. Diesel Electric Plant, 8 K.W., 110 Volts, D. C. (radiator cooled and manual starting) for the Gordon's Indian Residential School at Punnichy, Saskatchewan. This plant was installed by the Hube Electric Company, 184 Cornwall Street, Regina, Sask.

Due to the fact that the school has been closed during the past year because of water difficulties, the engine has had very little use. We have now received a letter from our Principal, Mr. Mayo, at the Gordon's School, which reads in part as follows: -

"It is in connection with our engine for lighting plant. The Witte Diesel Engine which was installed last year has been less than useless to us. We have not been able to run it two weeks at a time without trouble. Twice the main bearing has burnt out. The first time I obtained new babbit bearing and put them in. After running a little while the same thing happened again. I then called in a competent mechanic from town and had him put in new bearings and check the engine over. I am enclosing you a copy of report I got him to give me, for your inspection.

With reference to letter from this office under date of May 6, 1948 forwarding requisition #37A for material for repairs to the root house, Gordon Indian Residential School, Mr. Davis states in his letter he is enclosing requisition for material and LABOR, but on the requisition the item for labor was not included.

This appears to be an oversight,as the original request made by the M.S.C.C., was for 5000 M of 2 x 8 x 14, one barrel of tar , one keg of nails and $200.00 for labor.

I would recommend that an amount of $200.00 be authorized for labor in connection with repairs to the root house.

Re: Your File 121-1-5
Purchase order No. 15007
Gordon's Indian Residential School

Dear Sirs:

With reference to our letter of June 11th, concerning difficulties experienced with this Witte 12 H.P. Diesel Electric Plant, as advised you in our letter, we felt it necessary to take this up with the factory. We knew that they would be able to give a complete record on the engine and plant involved.

We would like to mention at this point that Witte Engine Works is a division of the Oil Well Supply Co., which is a subsidiary of the United States Steel Corp., and is a very highly responsible manufacturing concern. Witte engines are known the world over for their sturdy construction, superior engineering details, and uniformity of excellence in their products.

We are enclosing herewith copy of a letter just received from Mr. Walter M. Petty, Sales Engineer for Witte Engine Works, which we feel is self-explanatory. The points raised by Mr. Petty are well worth your careful consideration. We feel very much upset over the manner in which the engine is now performing, or rather not performing, and we believe it will be necessary for all of us to insist upon a very careful check-up by competent engineers. Mr. Petty has made a suggestion regarding the foreman of Larson & Richmond and the check-up which he should make. You will also note his comments on the long idle period before starting to which this engine was subject.

MAINGUYS LIMITED

Dept. of Mines & Resources,
Ottawa, Ont.

June 23, 1948.

It should very definitely have been carefully gone over from every angle before being run after such a long lay-up period. Undoubtedly the scoring of the cylinder or the piston rings, if such has occurred was caused by the lack of attention to the lubricating system before starting the engine.

We particularly note Larson & Richmond foreman's report dated March 30th to Mr. Mayo, the second paragraph, where he said "upon examination I found the crank case dry of oil and the babbitt on connecting rod entirely burned out". This situation is certainly worthy of a thorough check-up before placing presponsibility for the damage which has occurred.

We will appreciate very much your comments and suggestions on this.

Yours very truly,

Re: Your File 121-1-5
Purchase order No. 15007
Gordon's Indian Residential School

Dear Sirs:

We are greatly concerned over the contents of your letter of June 5th, together with report made to you by Larson & Richmond.

In view of the serious complaint made and the fact that they have questioned the reliability of the Witte engine and refer to it as a poorly built war product, we find it necessary to take this right up with the factory. You may rest assured that everything will be done to make the entire situation satisfactory to the Department, but we must proceed along certain lines in view of the above statements.

We can assure you that the Witte engine has such a high reputation that we feel there is something underlying this particular job which requires straightening out. It may be at the factory and it may not. We will communicate with you the moment we have a reply.

Yours very truly,

MAINGUYS LIMITED

C O P Y.

121-1-5.

AIR MA[redacted]

File: 1149-312-11 ACE.

Indian Affairs Branch, Department of Mines & Resources, OTTAWA.

When I was in Prince Albert last week Mrs. Alice Simonson, widow of the late Mr. Chris. Simonson, of the William George Plumbing Company, asked me to call and see her as she was quite concerned about instructions which she had received from Mr. T.S. Mills, Chief Engineer, Engineering and Construction Division, Department of Mines and Resources, Lands and Development Branch, to the effect that a vertical high pressure boiler will have to be installed at the Gordon's Indian Residential School instead of the horizontal boiler which has been ordered and delivered at the school.

I am enclosing herewith copy of a letter which Mrs. Simonson has given me dated June 19th, 1948; copy of a letter from Mr. N.O. Grosser, on behalf of the William George Plumbing Company addressed to Mr. A.H. Hargreaves, 393 Nelson Street, Apartment 8, Ottawa; copy of a letter addressed to Mr. Grosser from Mr. T.S. Mills dated June 5th, 1948; and copy of a letter from Mr. Grosser addressed to Mr. Mills dated June 14th, 1948, on the subject of the boiler.

From Mrs. Simonson's letter it will be seen that she is in a very difficult position. I do not know whether the letter which Mr. Grosser addressed to Mr. Hargreaves received the attention of Mr. Hargreaves but I am inclined to think that it did not. I am of the opinion that the boiler which was ordered by the late Mr. Simonson and delivered at the school was ordered on specifications given to Mr. Simonson by Mr. Hargreaves as Mr. Simonson was working on a cost plus basis with regard to the equipment, and there seems no reason why he should not have ordered the boiler exactly as specified by Mr. Hargreaves. However, the fact remains that the William George Plumbing Company will be out of business at the end of this month as the licenses expire, and employees of the firm have sought and obtained employment elsewhere, expecting that the Gordon's School contract would be completed by that time. If Mrs. Simonson has to dispose of the boiler which has now been delivered, order a vertical boiler, await its delivery in perhaps six months' time, and endeavour to re-engage men for its installation, it will be very difficult for her.

The measurements of the boiler room at the school are in the hands of Mr. Mills and I feel sure that it is possible to install the horizontal boiler either as suggested by Mr. Grosser or to the right of the two low pressure boilers and parallel thereto in such a way that the high pressure boiler will be satisfactory if it is found later necessary to use a stoker. I would strongly recommend that Mrs. Simonson be given instructions to immediately install the horizontal boiler in either one of these two places. In this manner the contract would be completed by the time her licenses expire and while she still has the men to do the work. Also the heating and plumbing will be completed by the 1st of September.

If it is decided to carry out my recommendation Mrs. Simonson should be so instructed by telegram. If the Engineering Branch insist upon the installation of the vertical boiler it will be some months before the contract can be completed and even then, with some difficulty.

June 23/48

Indian Affairs. (RG 10, Volume 6310, file 654-5, part 5)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

I may say that Mrs. Simonson gave me access to all of her records in this connection and I find that the high pressure boiler was not mentioned in the original contract and there is nothing on the files in the office of the William George Company to show when or how the horizontal boiler was ordered by Mr. Simonson. However, there is information supplied by Mr. McKee, Manager of Western Supplies, Saskatoon, to the effect that Mr. Simonson called on him personally and placed the order for the boiler from particulars which he had in a small notebook and that Mr. Simonson was very specific in placing the order. The notebook in question cannot be found amongst Mr. Simonson's personal effects.

Lands & Development Services Branch

26895 QUOTE FILE I.A. 1580-4

OTTAWA June 18, 1948.

Re: Gordon's Indian Residential School,
Punnichy, Sask.

We are in receipt of a letter from the William George Plumbing Company with reference to a high-pressure boiler for the above.

This unit was not included in the specifications, but following a further inspection by our officer and the late Mr. Simonson it was felt that the existing boiler should be replaced at the time the revisions to the mechanical services were being carried out. Consequently Mr. Simonson was requested to submit a proposal to this Division for approval before the installation was made. Unfortunately, his death occurred before this could be done.

Mrs. Simonson, as his successor, has undertaken to complete commitments made by her husband, but intends to dispose of the business before the time required for delivery of the boiler elapses, and has accordingly asked to have that item omitted.

It is felt that by purchasing a boiler through the Department, delivery can be made sooner than the four to six months mentioned by the William George Company in their letter, as already discussed with Col. Neary.

Accordingly it is recommended that the Indian Affairs Branch purchase a high-pressure boiler and have same shipped to the School. At such time it could be arranged to have another Contractor go to the job and connect this unit to the piping system which is now being installed under the terms of the specification and drawings governing the work. The estimated cost of this installation is approximately $1,200.00 which can be met from funds already transferred to us for the work.

The boiler required should meet the following specification:

> "One thirteen Horse Power vertical high-pressure boiler built for 100 lbs. per square inch working pressure, complete with fire and ash doors, grates and grate-bearers, and smoke bonnet. Furnish suitable tube brush and rod for cleaning purposes. Supply the following mountings: steam gauge and siphon, water glass, try cocks, safety valves, blow-off valves and nipple, feed and check valves, injector and piping. The above unit shall be built in accordance with Canadian Interprovincial regulations and a certificate of inspection shall be furnished with the boiler."

Gordon's Indian Residential School
High-pressure boiler:

Difficulties, said to be unexpected, have arisen. Delivery has been made of a horizontal unit to instal which would alter the lay-out of the furnace room. A vertical boiler, however, would, it is claimed, not be obtainable for several months. Meanwhile Mrs. Simonson has arranged to allow her business licence to expire at the end of June, and the present crew of workers are said to have entered into engagements with other employers.

The area ABCD is about 4 ft below the area DCEF. It seems that a vertical boiler would have stood at point X. The Principal says that a horizontal boiler could be installed at point Y by cutting away not more than two feet of the concrete platform on which the pressure tanks and pump rest. These need not be disturbed. It would still be possible to have almost nine feet

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

Library and Archives Canada / Bibliothèque et Archives Canada
www.collectionscanada.gc.ca

of clear space between the furnace doors and the boiler in this position. It does, of course, lengthen the pipes connecting with the laundry.

New Water System:

Work has not started and there is over a mile of ditching and piping to be done.

C.A.T. Clark

Later (on train Touchwood to Edmonton)

After seeing the furnace room at nearby Muscowequan School, I see more to commend the change at Gordon's. The horizontal unit at Y would permit a side-mounted, augerless stoker to be installed (as at Muscowequan) at the right side of the right-hand furnace (i.e. at point x) convenient to the fuel supply.

The Principal and Sister Superior at Muscowequan say that their vertical boiler is not now big enough and that the tubes on this type of boiler deteriorate fast at the fire-box end.

C.A.T.C.

Layout at Muscowequan.

We are in receipt of a memorandum from Mr. Hoey to which is attached your letter of the 21st instant, relative to the above. It is evident that your letter was written before the William George Plumbing Company received ours of the 18th instant. A copy of our letter is enclosed herewith for your information.

After having read the enclosed copy, you should fully realize that the William George Plumbing Company is being fairly dealt with, and that no action taken or contemplated is intended in any way to embarrass or penalize them, or to interfere with their arrangements for winding up their business affairs.

It may be added that this Division has endeavoured to carry out the necessary extensive mechanical revisions at the Gordon's School in a manner which is considered to be in the best interest of the institution, and that we have received full and satisfactory co-operation from the contractor during the progress of the work.

When the William George Plumbing Company have completed their work, it is our intention to have a final inspection carried out by an officer from this Division. You will be notified when this inspection is to be made.

Memorandum

Re: Water Supply - Gordon's Indian Residential School

With reference to your notation on a memorandum from Mr. Hoey, dated June 19, 1948, we presume that Mr. Ostrander desires the water supply from the spring to be installed in the School by September 1st.

No action is being taken by this office on this matter until authority is received from Indian Affairs. In this connection we would refer you to a memorandum from Mr. Hoey dated May 26, 1948, in which he states:

> "It is our intention to include the amount in our Supplementary Estimates, but at the present time I am not in a position to advise you if the amount will be allowed."

So far we have not been advised as to the availability of funds. After authority is received to proceed with the work, it will be necessary to make purchases of materials. Installation can then begin if a contractor, having the necessary machinery, will undertake the work.

J. A. Mills
Chief Engineer.

Mr. Hoey - Please let me know if an item has been approved in the Supplementary Estimates to cover the cost of construction of this project and if so the amount of the appropriation.

5/7/48.

Attention: Mr. B.F. Neary

Re Gordon's Indian Residential School
Plumbing and Heating Repairs -
Contract with Wm. George & Co.

Work on the above project has progressed to the point where a fairly accurate estimate of cost can now be made. It is always difficult to make an accurate estimate of repair jobs as necessary alterations come to light progressively when the work gets underway. Costs of materials also have increased by from 10 per cent to 30 per cent since the contract estimate of $33,500.00 was made.

The following figures summarize the status of the contract:

Expenditures, 1947/48 - - - - - - -	$ 12,539.73
Expenditures, 1948/49 - - - - - -	17,518.96
Invoice on hand - - - - - - - - - -	9,979.88
Holdback to Credit of Contractor-	516.41
Estimate of Accounts to come- - -	3,500.00
Total Costs Estimated- - - -	$ 44,054.98

Allotments:

1947/48 - - - - -	$ 12,539.73
1948/49 - - - - -	25,000.00
Total - - - - - - - - - - - - -	$ 37,539.73

It will be seen from the above figures that an additional $7,000.00 to $8,000.00 will have to be found if we are to meet payments already due.

Memorandum:

DIRECTOR, LANDS and DEVELOPMENT SERVICES BRANCH

Gordon's Indian Residential School

The Indian School Administration of the M.S.C.C. is most anxious to ascertain whether the above residential school will be ready for operation by September 1, 1948.

They are now busy engaging staffs, purchasing supplies and making preparations for the opening of their numerous other residential schools. It is therefore essential that they be provided with information which will enable them to make plans concerning the opening of the Gordon's School.

At the present time we do not know whether the new water system will be ready in time for the fall opening or whether the old water system will provide for the children and staff of the school.

I would, therefore, request that we be advised as soon as possible as to whether the water supply will be adequate to meet the needs of this school by 1 September, 1948.

Mr. R. A. Hoey,
Director,
Indian Affairs Branch,
Department of Mines & Resources,
Ottawa, Ontario.

Dear Mr. Hoey,

re: Water Supply
Gordon's Anglican Indian Residential
School, Punnichy, Sask.

As you are aware, the above school has been closed for a considerable time because of necessity for the complete reconditioning of the heating system and the installation of a water supply system that would furnish adequate quantities of water fit for human consumption.

I understand that the new heating system is nearing completion and will be ready before the commencement of the normal fall term. On the other hand, I believe that no work has been done on laying a pipe line to the school from an established source over a mile distant from the school. I am given to understand that delays in installation of this pipe line are due to inability to obtain an assured supply of the necessary pipe.

Until this pipe line is installed, it is useless to even think of reopening this school as there is no supply near the school of water fit for human consumption. The early completion of the pipeline is therefore of great importance from the standpoint of the education of some 120 Indian children.

I would urge, therefore, that strong representations be made to the Minister of Trade and Commerce to give very high priority to the supply of the pipe necessary to complete this project. If it would not embarrass you or your Department, I would be glad to have this office make a personal approach to the Hon. James Gardiner, Federal Cabinet Minister from Saskatchewan, with

Regina, July 12th, 1948.

Indian Affairs Branch, Department of Mines & Resources, OTTAWA.

With reference to Department letter of the 22nd ultimo, File No. 121-1-5 (E.1), addressed to Mr. Fred A. Mayo, Gordon's Indian Residential School, Punnichy, in connection with the engine supplied to that school, and which has given unsatisfactory service, I have to say that I was at the school when this engine was examined by Mr. Grosser, of Prince Albert.

I note that in the letter of Mr. Walter M. Petty, Sales Engineer of the Witte Engine Works, addressed to Mainguys Limited, Montreal, he is under the misapprehension that Mr. Grosser is not competent to criticise this installation. I consider Mr. Grosser is very competent. He is the head of the firm of Grosser and Glass, of Prince Albert, who are in the business of rebuilding and re-boring engines, and building and repairing machinery of all types. Mr. Grosser is a man of perhaps fifty-five years of age, with a life time of training and experience in such matters, and there are few in this province better qualified to pass judgment on an internal combustion engine.

I have had a further discussion with Mr. Grosser and he emphasized the following points:

1. The engine is too small for the work it is expected to do. It is a 12 h.p. and should be 16 h.p., preferably 20 h.p.

2. Being a Diesel type it is too complicated for satisfactory operation by inexperienced staff such as there has always been at the Gordon's School. It is very difficult to start and at times Mr. Mayo has found it almost impossible to start it. Consequently he has fallen back on the old Lister engine to supply power, and it was intended that the Lister engine should be an auxiliary engine and not have to do most of the work, as it has been doing.

It does not require an expert to know that the lubricating system of the Witte engine has not been satisfactory. Why it is not satisfactory I do not know, but certainly it has given a great deal of trouble. Possibly the excuse made by Mr. Petty that part of the trouble of faulty lubrication may be caused by the engine standing idle for long periods is true. However, when it has been standing idle, this, also, was the fault of the engine as Mr. Mayo had been unable to start it.

At the time the engine was purchased it was quite difficult to get engines of any kind but they should not be very difficult to get now, and I believe the Department should insist that the company who furnished it assume responsibility for immediately putting it in shape to operate if we are to keep it. However, I would much prefer that it be returned to the company and that company, or some other, be requested to supply a less complicated engine, and of at least 16 h.p.

If something is not done very soon about the engine the school will be re-opened with only the old Lister fit to use, and that, too, will break down.

Re: Gordon's Indian Residential School,
Punnichy, Saskatchewan.

We are in receipt of a memorandum from Mr. Hoey to which is attached your letter of the 21st instant, relative to the above. It is evident that your letter was written before the William George Plumbing Company received ours of the 18th instant. A copy of our letter is enclosed herewith for your information.

After having read the enclosed copy, you should fully realize that the William George Plumbing Company is being fairly dealt with, and that no action taken or contemplated is intended in any way to embarrass or penalize them, or to interfere with their arrangements for winding up their business affairs.

It may be added that this Division has endeavoured to carry out the necessary extensive mechanical revisions at the Gordon's School in a manner which is considered to be in the best interest of the institution, and that we have received full and satisfactory co-operation from the contractor during the progress of the work.

When the William George Plumbing Company have completed their work, it is our intention to have a final inspection carried out by an officer from this Division. You will be notified when this inspection is to be made.

Sgd. T.S. Mills,
Chief Engineer.

Department of Mines & Resources
Indian Affairs Branch
JUL 15 1948
P.M.
REGISTERED

Regina, July 12th, 1948.

Indian Affairs Branch, Department of Mines & Resources, OTTAWA.

I am enclosing herewith copy of a letter from Mr. T.S. Mills, Chief Engineer, Lands and Development Services Branch, dated June 28th, 1948, his file I.A. 1580-4, in connection with the horizontal boiler referred to in my letter No. 1149-312-11 ACE. dated June 21st, 1948.

Since writing the letter referred to I have received a letter from Mrs. Simonson on behalf of William George and Company, which reads as follows:

> "In connection with the high-pressure boiler for the above project, I am enclosing a letter received from Mr. Mills. Now the question is what to do with the high-pressure boiler delivered to Punnichy? Waiting your kind attention, we are..."

The contract of the William George Plumbing Company is almost completed at the Gordon's School but, of course, a high pressure boiler will not have been installed, and the horizontal boiler in dispute is standing at the school awaiting disposal. When the contract is completed I assume that Mr. Hargreaves will be sent to the Gordon's School for the final inspection. In a conversation with Mr. Grosser, who is Mrs. Simonson's advisor, and who assumed financial responsibility to have the contract completed following the sudden death of Mr. Chris Simonson, he informed me that he has sufficient faith in Mr. Hargreaves' good judgment that he feels Mr. Hargreaves will decide that the horizontal high pressure boiler could be, and should be, installed. Mr. Grosser is firmly of the opinion that there is sufficient room for its installation without interfering with the rest of the plant, and, in his opinion, the horizontal type will be much more satisfactory than will the vertical type boiler which it is contemplated installing some time later. Mr. Grosser gives as his reason for this the fact that the Gordon's School has never had a very satisfactory engineer, and may not have in the future. Mr. Grosser says that as the tubes are always covered with water in the horizontal type boiler, and not with the vertical type boiler, the tubes will give much less trouble and need replacing less often with the horizontal type. He also states replacement of the tubes of the horizontal type boiler will be less difficult than with the vertical type boiler.

I would recommend that the horizontal boiler be left at the school until after Mr. Hargreaves' final inspection and recommendation, and if Mr. Hargreaves recommends installation of the horizontal type boiler it be installed as soon as possible after his inspection, as a high pressure boiler will certainly be needed.

PERSONAL

Brigadier P. C. Klaehn, O.B.E.,
District Administrator,
Department of Veterans Affairs,
London Block,
Saskatoon, Sask.

My dear Klaehn:

I certainly enjoyed seeing you again and the chat we had in your office back in mid-June.

For some months I have been giving a hand to the Anglican Indian School Administration which operates some 15 Indian Residential Schools in various parts of the country. One of these is on the Gordon's Reserve at Punnichy, Sask.

Unfortunately, the water supply failed at that school a while ago and it now is necessary to lay a 4-inch pipe line between the buildings and a new source of supply somewhat over a mile distant from the school.

Some difficulty is being experienced in locating a contractor who would be prepared to take on the job of laying this pipe in the near future. The situation is of considerable urgency because the school is due to reopen at the beginning of September, but we cannot possibly bring the staff and children back until we have an adequate supply of water for them.

If you could give me the names and addresses of reliable contractors in Saskatoon who might be interested in this project, it would be much appreciated.

Kind regards to yourself and to any other old friends of mine in your office.

Sincerely,

GRT/BP

Dear Colonel Neary:

Re: Contractor for Pipe Line
Gordon's School, Punnichy, Sask.

Referring to my letter of 30th July to Brigadier P.C.Klaehn of the D.V.A., Saskatoon (copy of which I handed you), I have just received a telegram from him which reads as follows:

" R.B.McLeod, 57 York Building, Saskatoon, interested."

I hope that this information will be of use to the Engineering Branch of your Department in getting this pipe line laid at an early date.

yours truly,

G.R.Turner

(G.R.Turner)

P.S. Since the above was typed I have received the following telegram from Mr Mayo, Principal at Gordons, who had been asked if he could give the names of any prospective contractors for this work:

"Try Shannon Brothers, Contractors, Saskatoon"

Memorandum

Ottawa, July 30, 1948.

Re: Water Supply,
Gordon's Indian Residential School,
Punnichy, Saskatchewan.

A memorandum from Indian Affairs dated July 13th, 1948, and a later memorandum dated July 15th, with attached copy of letter from Canon H.G. Cook, Superintendent of the Indian School Administration of the Missionary Society of the Church of England in Canada are both acknowledged.

Calls for tenders on the material required for this project have been issued and quotations on the wood stave pipe have been received and are now in the hands of the Departmental Purchasing Agent. As the value of this pipe is over $5,000.00, an Order in Council is required to authorize the purchase.

After the issue of purchase orders, delivery of the pipe cannot be made for seven to eight weeks, which means that all the material will not be at the site of the work before October 1st. If a contractor can be found to handle the work on the ground, a few weeks after October 1st will naturally elapse before the installation will be complete. We can, of course, give no guarantee as to the date when the new system will be completed and ready for operation. If a Contractor can be found to do the work, delay might still occur which cannot at this moment be foreseen.

Regina, August 5th, 1948.

Indian Affairs Branch, Department of Mines & Resources, OTTAWA.

I am enclosing herewith copy of a letter from Superintendent S.H. Simpson, of the Touchwood Agency, and requisition for necessary repairs to the Lister Diesel engine at the Gordon's Indian Residential School.

This engine has been out of repair for some time, and when the school is opened it will be very necessary to have it in good working condition. It will be noted that the necessary parts total $57.23, F.O.B. Winnipeg, and that the estimated cost of labour will be $65.00.

I would recommend that the repairs be forwarded at once and that Mr. Simpson be given authority to have the repairs installed by Messrs. Larson and Reichmond, of Punnichy, Saskatchewan, as soon as the parts arrive.

AIR MAIL

Ottawa, August 18, 1948.

Mr. A.H. Hargreaves,
c/o Gordon's Indian Residential School,
Punnichy, Sask.

High Pressure Boiler - Gordon's Residential School

Dear Mr. Hargreaves:

I have, what may be bad news for you, concerning the purchase of the vertical high pressure boiler unit for the Gordon's Residential School. You will recall that on June 23rd we submitted to the Departmental Purchasing Agent a requisition covering the purchase of this boiler. In our requisition we quoted exactly from Mr. Mills' memorandum of June 18th which described the specifications of the boiler and also listed the firms from which it could be obtained.

I have just learned that the purchase order was issued on August 10th and that the order has been placed with the Port Arthur Shipping Company. The anticipated delivery date is four to six weeks.

Do you want to wire them yourself or do you think that we should wire them to ascertain if this delivery date can be advanced? I will expect to hear further from you concerning this matter and rest assured that we will do everything possible to help out.

I hope that all goes well with your trip and that things at Elkhorn will permit us to keep the school operating for at least one more year.

Yours sincerely,

Bernard F. Neary
Superintendent of Education.

1	13 h.p. vertical high pressure boiler built for 100 lbs. per square inch working pressure, complete with fire and ash doors, grates and grate bearers and smoke bonnet. Furnish suitable tube brush and rod for cleaning purposes. Supply the following mountings: steam gauge and siphon, water glass, try cocks, safety valves, blow-off valves and nipple, feed and check valves, injector and piping. The above unit shall be built in accordance with Canadian Interprovincial regulations and a certificate of inspection shall be furnished with the boiler.		
	Note: The Lands and Development Services who are supervising the repairs and improvements at this school have recommended that the above boiler be secured. The specifications mentioned above were prepared by them and they also suggest that prices and delivery dates be secured from the following firms: Christie Engineering & Supplies, 147 Hinton Ave., Ottawa Vulcan Iron Works, Winnipeg, Man. Port Arthur Shipbuilding Co., Port Arthur, Ont. They further advise that Christie Engineering & supplies who are representatives of E.Leonard and Sons, state that they are in a position to ship a boiler of the type required within six to eight weeks. The estimated cost of the boiler is $1,200. and this will be paid from funds that we have already transferred to the Lands and

ADDRESS REPLY TO
ENGINEERING AND CONSTRUCTION
Division

QUOTE FILE IA 1580-4

10337

Lands and Development Services Branch
OTTAWA, August 12, 1948.

Re: Gordon's Indian Residential School,
Plumbing and Heating Repairs.
William George and Company - Contractors.

We advised our Director, Mr. R.A. Gibson, by memorandum dated April 24th that we would require $25,000.00 for the fiscal year 1948-49 to complete the above project. In our letter of July 9th we ask for an additional seven to eight thousand dollars, and $7,000.00 was transferred to this Division.

We now find that $17,500.00 only has been received of the original $25,000.00 allotment, and we would therefore ask that you transfer the $7,500.00 balance to this Division. We summarize as follows for your convenience:

Original Allotment		25,000.00 ✓
Additional Allotment		7,000.00 ✓
Funds received to date	24,500.00	
Balance required	7,500.00	
	$32,000.00	$32,000.00

Department of Mines & Resources
Indian Affairs Branch
AUG 17 1948
P. M.
REGISTERED

A detailed report will be furnished as soon as we have the Contractor's final accounts. The cost will exceed the original $33,500.00 estimate by a considerable amount, and we **cannot** promise that the $32,000.00 alloted for the present fiscal year, plus the $12,539.73 spent during 1947-48, will complete the job.

Present indications are that the total cost will be a minimum of $45,000.00 to a maximum of $50,000.00, the more likely figure being $47,000.00. P.C. 4781 places the estimated cost at between $33,000.00 and $40,000.00. Section 3, clause (a) of the contract reads as follows:

R.A. Hoey, Esq.,
Director,
Indian Affairs Branch,
Department of Mines and Resources,
Booth Building,
165 Sparks Street,
Ottawa, Ontario.

.....2

"To pay to the Contractor the cost of the work, as defined in schedule "A" hereto attached which cost as so defined is herein after referred to as "the cost of the work" but unless authorized by the Minister not to exceed the sum of $33,500.00, which sum is herein after referred to as the estimated cost of the work."

It is evident that approval must be secured before we can exceed the $33,500.00 figure. We cannot give exact figures at this time, but "the cost of the work" as defined above, apart from the Contractor's fee, will be from $39,000.00 to $43,500.00 maximum. We are presently holding accounts in excess of the contract estimate of $33,500.00 which cannot be released for payment until we have approval covering the increased cost.

In explanation for the increased cost, we would point to the fact that a repair job cannot be accurately estimated in advance. Necessary replacements often do not become evident until the work gets underway. Heavy expenses, mostly unexpected, were encountered on this project by way of structural changes alone, which necessitated knocking down concrete partitions, re-bricking etc. This work alone cost $14,470.00, not including the 15% fee. The cost of materials has been on the increase ever since the original estimates were given, and it is not surprising that costs have increased accordingly.

Our Mr. Hargreaves is leaving the end of the week for the West on an inspection tour, and we will give you a detailed report later.

T.S. Mills,
Chief Engineer.

Capital Theatre Building,
Ottawa, Ontario.

12019

High Pressure Boiler- Gordon's Indian School,

Dear Col. Neary,

In reply to your letter of the 18th instant in connection with the above, you are advised as follows:

I think it would be advisable for you to wire the Port Arthur Shipbuilding Co. and insist on the earliest possible delivery of the vertical high pressure boiler.

For your own information we can afford to wait for about a month as the School can not be opened very well before the new water supply system is installed.

I was informed by our Mr. Shaw, before leaving Ottawa, that arrangements were being made to have this work installed as soon as possible. I would imagine that it will take at least a month to complete this phase of the work.

Mr. Mayo, the Principal, informs me that the hard frost can be expected before the middle of October and for that reason every effort should be made to accelerate this work. May I suggest that you telephone Mr. Shaw and point out the importance of having the water line installed as Quickly as possible.

I arrived here yesterday afternoon and am starting my inspection today. The boiler room looks very good and we have a plant that should prove to be satisfactory and efficient.

The work at Brandon and Elkhorn has been carried out excellently by the contractor and I have no hesitation in recommending that final payment be made. I expect to spend several days here as there is a lot of checking up to do before I can be sure that all items of the Contract have been carried out.

Sincerely Yours
Arthur H. Hargreaves

Arthur H. Hargreaves, Esq.,
Gordon's Indian Residential School,
Punnichy, Saskatchewan.

Dear Mr. Hargreaves:

I have for answer your letter of August 22 and I immediately sent the following wire to the Port Arthur Shipbuilding Company:-

"REFERENCE PURCHASE ORDER THREE THREE ZERO ONE FOUR WOULD APPRECIATE YOUR EFFORTS EXPEDITE DELIVERY HIGH PRESSURE BOILER FOR GORDON'S RESIDENTIAL SCHOOL AS ANXIOUS TO INSTALL FOR SCHOOL OPENING."

I also sent a memorandum through our Director to Mr. Gibson, asking him to expedite this work as much as possible. I advised him that he should give the work at Gordon's top priority over all projects from this Branch.

I have also noted your comments regarding Brandon and Elkhorn and as soon as bookkeeping work is done, we will make final arrangements for payment. I wish to thank you very much for the interest taken in these projects and assure you that we will do everything possible to co-operate from this end.

Yours sincerely,

Bernard F. Neary,
Superintendent of Education.

Memorandum:

DIRECTOR, LANDS and DEVELOPMENT SERVICES BRANCH

Gordon's Residential School, Water Supply.

I have just received a letter advising me that hard frost can be expected at the Gordon's School before the middle of October and that for that reason every effort should be made to accelerate the project of laying the water pipe.

It would be appreciated if this matter could be given top priority over all projects being carried out for this Branch.

Director.

Re Gordon's Indian Residential School

Dear Colonel Neary:

I am enclosing a copy of my interim report to Mr. Mills following a detailed inspection of the work carried out by the William George Plumbing Company at the above, for your, off the record, information.

In order to keep our original estimate within the sum of $40,000.00 some items of painting were ommited intentially from the spefications.

The items referred to include the painting of new radiators, re-built radiators, domestic hot, cold and recirculating piping, and low pressure steam and return distribution piping throughout the building.

Although there were no written memoranda to this effect placed on our files, the above action was decided upon during the preparation of the plans and specifications.

Mr. Mayo, the Principal of the school, has arranged with a local painter to carry out this work. The painter has estimated that this work can be done for $420.65 which includes material and labour. The work has already been started before I arrived and the purpose of this letter is to advise you that the sum of $420.65 was not included in the William George Plumbing Company's contract.

After discussing the matter with Mr. Mayo we are wondering if this could be charged to ordinary maintenance and repairs.

Very truly yours,
A.H. Hargreaves.

Mr. S.H. Simpson,
Superintendent,
Indian Agency,
Punnichy, Sask.

We have received a letter from the Superintendent of the M.S.C.C., recommending that the under mentioned amounts be provided in our 1949-50 estimates for the Gordon's Residential School:

" Repairs and painting of outbuildings and painting of interior of school.

Paint	$500.00
Brushes, oil, varnish	105.00
Labour for painting	350.00
Lumber, 1,000 f.b.m.	90.00
Nails	55.00

Note: the above materials have already been requisitioned by the principal through the local Indian Agent for delivery early next spring. "

Please let me have your comments on the above requisition.

Mr. S.H. Simpson,
Superintendent,
Indian Agency,
Punnichy, Sask.

We have received a letter from Mr. A.H. Hargreaves, an official of the Lands and Development Services Branch, who recently visited the Gordon's Residential School, in which he states that the principal of the school has arranged with a local painter for painting the radiators, piping, etc., throughout the building.

Mr. Hargreaves stated that the cost of material and labour will be $420.65, and an expenditure of this amount is approved.

When forwarding account you should attach a detailed statement signed by the painter regarding the work that he has carried out.

J.P.B. Ostrander, Esq., Regional Supervisor of Indian Agencies, Regina, Sask.

In repairing the heating and plumbing system at the Gordon Indian Residential School no provision was made by the Lands and Development Branch, who arranged for this work, to provide funds to re-decorate the boiler room, laundry room, new pipes, radiators and wash stands.

Attached hereto is Form 37 listing the materials and labour required for this work, also a copy of the Luthi Brothers estimate on labour in this connection.

I recommend that this work be done and that authority be granted to proceed with it as soon as possible.

PLEASE QUOTE
FILE 15150 #1732-312-11ACE (121)

September 3rd, 1948.

Indian Affairs Branch, Department of Mines & Resources, OTTAWA.

I am enclosing herewith copy of a letter from Supt. S. H. Simpson of Touchwood Agency and Requisition for material and labour in connection with redecorating the boiler room, laundry room, and new pipes,radiators and wash stands at the Gordon Indian Residential school, made necessary since the new heating and plumbing system was overhauled. I would recommend that Mr. Simpson be authorized to purchase the material from the North American Lumber & Supply Company, Punnichy and engage Luthi Brothers of Punnichy to perform the labpur.

J. P. B. Ostrander,
Regional Supervisor of Indian Agencies.
Saskatchewan.

Mr. S.H. Simpson,
Superintendent,
Indian Agency,
Punnichy, Sask.

With reference to your letter of August 26th, to Regional Supervisor Ostrander, the Department approves purchase of the items shown on the attached requisition, at a total cost of $58.70.

We also approve an expenditure of $40.00 for labour.

It is noted the expenditure is required for fire protection purposes at the Gordon's School.

Mr. J.P.B. Ostrander,
Regional Supervisor of
Indian Agencies,
Regina, Saskatchewan.

With reference to your letter of the 3rd instant, we are not prepared at the present time to authorize the heavy expenditure that will be necessary to redecorate the rooms in the Gordon's Residential School where new plumbing has been installed.

You might write us again about the first of December at which time we will be in a better position to decide if our appropriation is in such condition that this expenditure can be allowed during the current fiscal year.

TO HIS EXCELLENCY

THE GOVERNOR GENERAL IN COUNCIL

The undersigned has the honour to report:-

THAT in the 1947-48 estimates of the Indian Affairs Branch, Department of Mines and Resources, funds were provided for carrying out major repairs and replacements to the plumbing and heating system in the Gordon's Indian Residential School, in the Touchwood Agency, Province of Saskatchewan;

THAT drawings and specifications were prepared by the Department, and calls for tender were issued, as a result of which only one tender, that of the firm of William George & Company, Prince Albert, Saskatchewan, was submitted on the basis of cost plus fifteen percent (15%) for materials and labour. It was recognized that due to the nature of the work, the total cost would not be definitely known until the work got under way;

THAT Order in Council P.C.4781 dated November 21, 1947, authorized that this work be undertaken at once and carried to completion;

THAT upon investigation, it was considered to be in the best public interest to accept the tender submitted by William George and Company of Prince Albert, Saskatchewan, whose approximate estimate of the cost of the work was Thirty Three Thousand Five Hundred Dollars ($33,500.00) plus a 15% fee;

THAT as the work progressed, additional essential repair items became necessary which together with increases in the cost of labour and materials, and including the Contractor's fee of fifteen percent (15%), have increased the total cost of the repairs to approximately Fifty Four Thousand Dollars ($54,000.00), which, after making provision for supervision, will involve a total estimated expenditure to the Department of Fifty Five Thousand Dollars ($55,000.00);

THAT the work is nearing completion at this date and the Department's supervising officer has reported that the work is satisfactory.

Indian Affairs. (RG 10, Volume 6310, file 654-5, part 5)

THE undersigned therefore has the honour to recommend that authority be granted for the payment of the additional cost of said repairs, the total estimated expenditure for the said repairs, including that previously authorized, not to exceed Fifty-Five Thousand ($55,000.00) Dollars, the said additional expenditure to be met from the appropriate vote of the Indian Affairs Branch 1948-49 Estimates (Vote 772, Indian Education), Department of Mines and Resources.

Respectfully submitted,

Minister of Mines and Resources.

MEMORANDUM

Ottawa. September 30, 1948.

Re: Gordon's Indian Residential School,
Punnichy, Saskatchewan.

After a recent inspection trip through the West, our heating engineer submitted a report on the above, and the following is a summary based on the results of his survey:-

From a detailed inspection lasting several days, it can be stated that the contractor has carried out the work generally in accordance with the plans and specifications in a competent and satisfactory manner, except that as expected, certain relatively minor items remained to be completed at the time of our officers visit.

The work in the boiler room deserves special mention, and in spite of many delays caused by shortages of materials and labour difficulties, no effort was spared to carry out the intent of the plans and specifications.

The contractors men had left the job before our officer arrived, but had stated their intention of returning to complete the work following the inspection.

During the course of the inspection, the late contractors wife, Mrs. Alice Simonson and her business advisor Mr. Nelson Grosser, visited the school and conferred with our officer who provided them with a list of items of work which had not been carried out, but which it was agreed were part of the contract. It was clearly established after a careful check-up, that the work which remained to be carried out, had not been charged for. Specifically, the items in question included:- the installation of wall, floor and ceiling plates throughout the building; the bracing of the radiators in certain rooms; the painting of equipment and piping in the boiler room; the installation of a pressure relief valve on a cold water line to the domestic hot water tank and several additional minor items.

Mrs. Simonson agreed to have this work carried out as soon as possible. When this work is completed, it is felt that Indian Superintendent Simpson who was familiarized with the situation, can carry out the final formal inspection and recommend acceptance of the work.

It has been recommended to the Indian Affairs Branch in a previous memorandum, that the 15 horsepower horizontal high pressure boiler ordered in error by the late contractor, be purchased and used at the Cowessess Indian Residential School. This boiler with its accessories including boiler front, grates etc, is at present on the school property and is not being paid for by the contractor. Col. Neary has advised that a purchase order will be issued and the boiler in question will be moved and set up at the Cowessess Indian Residential School.

We are also advised by Col. Neary, that a purchase order has been issued to the Port Arthur Ship Building Company for a new vertical 10 horsepower high pressure boiler to be set up at the Gordon's School. At his request, our officer made tentative arrangements to have another contractor connect this boiler when it arrives at the School. This work will not be carried out by the William George Plumbing Company.

R.A. Gibson,Esq.,
Director,
Lands and Development Services Branch,
Department of Mines and Resources,
Ottawa, Ontario.

J.A. Miller

Chief Engineer.

REGISTERED

Dear Colonel Neary.

I was talking to Mr Borrish of Banff over the phone in regard to the laying in of our water supply. they are starting the work next week. He says there is no provision or mention made of putting the water into the barns or farmers cottage.which will be passed by the main line. I particularly stressed when the survey was being made that provisions be made to take that into account.

We cannot handle stock successfully with no water in barns. it means providing a man and tank to haul and then ice cold water which is not good for stock.

The water line runs between the barns and cottage. The water could be run back in the same ditch from compession tanks. very little extra digging about 200ft west to barns and 50ft east to cottage. I have taken measurements for this and it would take about 1000 ft of piping and I have on hand here that could be used for that purpose 700 ft. It would be a great saving to The Department to do this while the job was inhand than to be doing it later on when the whole distance would have to be again dug for a water supply. I would be very grateful if you would do what you can to ensure us getting the water now.

Yours faithfully;

Fred A. Mayo.

Colonel B. F. Neary,
Supt. of Welfare & Training,
Indian Affairs Branch,
Department of Mines & Resources,
Ottawa, Ont.

Dear Colonel Neary:

Water Supply
Gordon's School, Punnichy

Mr. F. A. Mayo, Principal of the above school, has sent me a copy of his letter of 1st October to you requesting that water lines be run into the farmer's cottage and barns while the present contract is being carried out.

I would like to earnestly support Mr. Mayo's request because it seems abundantly clear that this can be done much more cheaply now than if it is delayed until later when expense for re-excavating would be necessary. I would point out particularly that 700 feet of the 1000 feet of piping required are already on hand and can be made available without expense to your Department.

Will you please let me know what you propose to do in this matter.

Yours truly,

Henry G Cook

FILE

File 1977-312-11 ACE.

Regina, October 8th, 1948.

Indian Affairs Branch, Department of Mines & Resources, OTTAWA.

I am enclosing herewith copy of a letter from Superintendent S.H. Simpson, of the Touchwood Agency, also requisition and tender from the J.H. Ashdown Hardware Company for a walk-in refrigerator for the Gordon's Indian Residential School, at a cost of $1079.00.

It is my opinion that the need of a water supply for the Gordon's School is much more urgent than the provision of a walk-in refrigerator. It is quite true that a walk-in refrigerator will be needed when the school is opened. The cost of heating and plumbing at the school has been more than anticipated and we must add to this the cost of installing the water, which is also a large figure.

This school has operated for many years without a walk-in refrigerator, and with many other inconveniences much more important. These inconveniences will soon be corrected. I would recommend that no action be taken at the present time with regard to the refrigerator, but that provision be made in the Estimates to supply it in the fiscal year 1949-50 if the school has proved, in the meantime, that it is satisfactory in every other way.

MEMORANDUM

Re: Gordon's Indian Residential School,
Punnichy, Saskatchewan.

You are advised that our Mr. Hargreaves on his recent trip to the West, was requested by the Indian Affairs Branch, to obtain an estimate from a local contractor, of the cost of installing the new vertical high pressure boiler at the above. This work was not to be included in the William George Company contract.

As a result, a price of $462.18 has been submitted to the Indian Affairs Branch by Messrs Neale Stothard and Chapman, of Brandon, and after due consideration, it is considered that the figure is fair and reasonable for the work involved.

It is therefore, recommended, that the work be awarded to Messrs Neale Stothard and Chapman. It is understood that the work will be installed under the nominal supervision of Indian Superintendent Simpson, and that no funds will be transferred to this Division.

Re: Water Supply - Gordon's Indian
Residential School

Referring to your notation and copy of memorandum from Indian Affairs dated October 7th, 1948, and copies of letters enclosed therewith, we would advise that it is rather late now to be changing the plans or extending the system to supply the Gordon's School.

We have, however, written to Mr. Cornish to secure a report with suggestions as to what steps might be taken to comply with request of Indian Affairs. It is noted that 700 feet of pipe are available out of 1000 feet required. Neither the size nor the type of pipe is stated.

It would appear from the letter to Col. Neary from Canon Cook that there will be a shortage of 300 feet of pipe. In that case we could offer no guarantee that this shortage can be bought in time to install before freeze-up.

We will, therefore, advise you what information and suggestions we get from Mr. Cornish.

With reference to the installation of a new vertical high pressure boiler at the Gordon's Residential School, the Lands and Development Services Branch advise us that this work was not included in the William George Company contract.

Messrs. Neale Stothard and Chapman of Brandon offered to do the work for $462.18 and this figure is considered fair and reasonable.

Please arrange with the firm mentioned to install the high pressure boiler.

Bernard F. Neary

ALL CO[illegible]NICATIONS TO BE
AD[illegible]RESSED TO
THE PRINCIPAL

Oct 16th 1948.

Mr Simpson.
Indian Agent.
Punnichy. Sask.

Dear Mr Simpson;

We have no facility in our laundry for ironing. The laundry stove here is broken and not safe to use for heating flatirons and those of which are here are done for. There is as you know such a lot of laundrying to get through in our schools. a flat Ironing machine such as I have submitted to you in the list would be a great help to us in cutting down the labour for the laundry matron and girls. If you could obtain approval to purchase one of these I could have it installed at the time they are putting in the high pressure boiler.

Yours faithfully;

Fred. A. Simpson.

PLEASE QUOTE
FILE 2073-312-11 ACE.

Department of Mines & Resources
Indian Affairs Branch
OCT 25 1948
P. M.
REGISTERED

Regina, October 21st, 1948.

Indian Affairs Branch, Department of Mines & Resources, OTTAWA.

Enclosed is copy of a letter from Superintendent S.H. Simpson, of the Touchwood Agency, copy of a letter which he has received from Mr. Mayo, Acting Principal of the Gordon's Indian Residential School, and requisition for a 48" flat work ironer at a cost of $528.00 F.O.B, Winnipeg.

There is no doubt that an ironing machine is needed at the Gordon's School, or the machine will be needed if they ever complete the installation of the water supply. Mr. Mayo asks that the ironing machine be delivered to the school to be on hand for installation at the same time that the high pressure boiler is installed. Of course this would be advisable, but I must say that at this time I am greatly in doubt that the Gordon's School will be open this winter. I have not seen the dragline which was to arrive at the school last week to commence excavating for the installation of the pipe line. However, I do not think it will be suitable for the excavation in view of the fact that many rocks and boulders of all sizes will no doubt be found in the excavation, and I am afraid that quite a number of the boulders will be too large to handle with the dragline scoop. Winter is nearly upon us, when we will have frozen ground to contend with, as well as the boulders.

As I understand the Appropriation for school purposes is not too generous, I see no advantage in spending $528.00 on an ironing machine to stand at the school until next summer before it is used. I would recommend that in the event approval is given to the installation of the ironer requested by Mr. Mayo, no order be placed for one until there is a certainty that the school is about to be re-opened.

J.P.B. Ostrander,
Regional Supervisor of Indian Agencies,
Saskatchewan.

Colonel B.F. Neary
Supt. of Welfare & Training
Indian Affairs Branch
Dept. Mines & Resources
Ottawa, Ontario.

Dear Colonel Neary:

Re: Water Supply, High Pressure boiler,etc.
Gordon's Anglican Indian School
Punnichy, Sask.

The following extract from a letter dated 5th November received from the Principal of the above school is forwarded for your information:

"The pipe line is about half way dug and some pipe laid. The well is dug and they are building the house to shelter same. They have been at the job three weeks now but there is snow on the ground and a little frost and the engineer here says if it is frozen hard before they are ready to cover pipe he does not think they will risk covering same with frost in the filling. We are in a terrible mess with the snow and dirt around. It is most annoying to think of all the time and good weather we have had and this had to be left so late in making a start. I had thought if they had completed or about completed the work by the end of this month we could arrange to open school by Jan. 1st but it just depends on the next two or three weeks. I will write you again as soon as ever I can see the end in sight.

I have just had word that the men are coming to install the high pressure boiler next week."

Yours sincerely,

Punnichy Sask. November 15th, 1948.

J.P.B. Ostrander, Esq., Regional Supervisor of Indian Agencies, Regina.

With reference to my letter 636-G11 of November 10th, pertaining to the construction of the water pipe line at the Gordon Indian Residential School. Mr. Cornish of Banff arrived at the school on Saturday night, and left for Saskatoon on the early morning train today. I was only able to interview him by telephone. He advises that there is a very good chance of completing this work this year, and stated that it all depends on whether or not we have very cold weather. When questioned as to how long it will take to complete the job under favourable conditions, he advised that it was possible to do so in two weeks.

Punnichy, Sask. November 10th, 1948.

J.P.B. Ostrander, Esq., Regional Supervisor of Indian Agencies, Regina.

With reference to our telephone conversation of this morning, I visited the site of the water pipe line now under construction at the Gordon Indian Residential School. The pipe line is dug and water pipes laid to within 2600 feet of the well which is now dug at the spring, and the well house is under construction. One of the workmen informed me that it is anticipated that water will have to be contended with in carrying the trench to the main water supply. Recent snow and rain and heavy frost has frozen the bottom and sides of the trench, and the loose earth to back fill the trench is now about 3" under snow.

I contacted Mr. Petefield, Engineer in charge, he is of the opinion that this work cannot be completed until next spring, due to conditions, I have already mentioned, and to having to test the pipe line for 48 hours prior to back filling the trench. He has written to Mr. C.R. Cornish, Inspecting Engineer at Banff, regarding this matter, and has promised to let me have a copy of his reply, which I will submit a copy thereof to you.

S.H. Simpson,
Superintendent, Indian Agency.

Memorandum

Re: Water Supply-Gordon's Indian Residential School
Extension to Farm Cottage and Barns

Referring to the memorandum from Indian Affairs dated October 7th, 1948, and our memorandum to you of October 15th, we have received a report from Mr. Cornish which indicates that the suggestion of the school Principal to install an extension to the Farm Cottage and Barns from the pressure tank in the school is not possible at the present time due to a lack of sufficient pipe.

However, Mr. Cornish recommends an alternative scheme to supply the Farm Cottage and Barns by connecting direct to the new wood pipe and using pipe, pump and other equipment at present on hand at the school. This proposal might involve an outlay of about $1,000.00 including $400.00 for excavation, laying pipe and backfilling the trench by the Contractor at present on the ground at a contract rate for 400 lineal feet of $1.00 per foot.

In a telephone conversation with Mr. Phelan of Indian Affairs, we understand that the total amount of $1,000.00 for this work is available and it is desirable that the work be done. As the School Principal has agreed to handle all the work necessary beyond the excavation, laying of pipe and backfilling of trench for the 400 feet necessary, Mr. Phelan agreed that we should arrange with the Contractor for this trench work and submit the bill to Indian Affairs for payment. The rest of the work would also be paid for by Indian Affairs direct and no funds would need to be transferred to this Service.

Will you please advise this Office if we have approval to accept the bid of the Contractor, R.B. McLeod and Company Limited, to excavate, lay pipe and backfill for four hundred feet at a cost of $1.00 per lineal foot.

It is now getting late in the season and dangerous to open up further trenches for water pipe, but if Indian Affairs desire the work done we recommend this scheme as the only one which could be attempted at this time; payment for all the work to be made direct by Indian Affairs so as not to conflict with the present contract.

Re: Water Supply Gordon's Indian
Residential School

We are sending you herewith a copy of a memorandum dated November 25, 1948, which we have received from the Chief Engineer, Engineering and Construction Division, concerning the above mentioned subject.

Mr. LeCapelain, of this office, spoke to Colonel Neary about this over the telephone during the morning of November 25, 1948. The latter advised that the contractor should be instructed by wire to continue with this work. Will you please let me have a confirmation of these instructions.

We might say, that we wired the contractor on the 25th instant to retain his equipment on the job and to continue the work.

Dear Sir:-

RE: Gordon's Indian Res. School, Punnichy, Sask.

When Mr. A. H. Hargreaves called on our firm he asked us to quote a price to install a vertical high pressure Boiler at the above school. The write has since that time visited the site and we wish to quote as follows:-

To install Leonard Vertical high pressure Boiler complete with ½" Injector, smoke breeching, cut in thimble to chimney, new 1¼" line to Dryer, valve and cover same, one ½" Crane inverted open Float Steam Trap on Dryer, ½" Return from Steam Trap to steel barrel placed beside Boiler. All pipes, fittings, valves, labor, transportation and board to complete this installation to your satisfaction for the sum of $462.18.

Yours very truly,

Neale, Stothard & Chapman,

Per. Percy Stothard .....

We have your letter of the 22nd instant, file 2291-312-11 ACE (121) with reference to the Gordon's Residential School.

In a memorandum from the Lands and Development Services Branch dated November 25th, we were advised that they had received a wire dated November 24th from Mr. Cornish stating that the main ditch for the water supply to the Barn and cottage at the Gordon's school would be completed on November 24th.

We approved a tender of $400.00 which had been submitted by R.D. McLeod and Company to excavate, lay pipe and back fill for 400 feet. In approving this extra amount we understood it would provide the farm cottage with a water supply by connecting direct to the new wood pipe and using pipes and other equipment at present on hand at the school

Memorandum

Re: Water Supply Gordon's Indian Residential School, Extension to Farm Cottage and Barns.

Will you please refer to our memorandum of November 19, 1948, regarding the arrangements made with Mr. Phelan of Indian Affairs that the payment for the work done by R.B. McLeod and Company, Limited, in connection with the water extension to the Farm Cottage and Barns at the Gordon's School would be paid direct to the Contractor by Indian Affairs.

Three certified copies of the account for this work in the amount of $443.73, and designated as Extra Account No. 1, are attached herewith along with one extra copy which has been typed in this office.

The work involved has been completed. Will you kindly forward the account to Indian Affairs for payment.

Attch.

Memorandum

A.M. REGISTERED

16353

Re: Water Supply-Gordon's Indian Residential School, Punnichy, Saskatchewan.

In reply to the memorandum from Indian Affairs dated January 8th, 1949, asking for a report on the completion of the water supply system to the above school, the following is submitted.

The waterline from the spring to the school has been installed and we understand is now in operation. The extension from the main 4" pipeline to the Farm Cottage and Barns has been installed so far as the work outside the building is concerned, and Extra Account No. 1, in the amount of $443.73, has been forwarded to you for transmission to Indian Affairs for payment. The school principal will handle the remaining inside work in connection with this extension, as arranged and referred to in our memorandum to you of November 19th.

The main contract with R. B. McLeod and Company, Limited, for the installation of the intake and 4" wood pipeline to the school has not been completely finished, as due to weather conditions the burning of the brush along the pipe right-of-way was not finished and tidying and cleaning up of the job was not completed. As the completion of the project in these respects cannot be done until Spring, money will be needed in the next fiscal year to make final payment to the Contractor. We understand he is likely to make an additional claim over and above the amount due under the contract for the work already done, which if allowed or partially allowed might have to be met from next year's funds. It is of course possible that some of the additional money needed might be available out of current Indian Affairs funds but it seems very likely that the amount transferred to this Service will be exceeded.

We are thus not in a position to say definitely at the present time how much money will be needed in the next fiscal year to complete payment to the Contractor, but we will advise you as soon as full information is available.

As part of the main wood pipeline to the school and the extension to the Farm Cottage and Barns were both installed in severe wintry weather, there is a danger that frost might penetrate to the pipe in each case during the present winter. To guard against damage to the system Mr. Mayo, the school principal, has been advised by our engineer Mr. Peatfield, to regulate the flow of water by the gate valve outside the cistern at the school and keep water flowing through the main pipe continuously during the winter. If this flow threatens to fill the cistern, a bleeder could be opened on the pressure system while the school is closed and only a small amount of water is being consumed.

www.collectionscanada.gc.ca

The caretaker should be advised to continue these arrangements and he should also endeavour to see that water is not allowed to remain motionless for long periods in the extension to the Farm Cottage during the present winter. These precautions should not be necessary after the present winter as the fill material in the pipe trenches will consolidate next summer and afford better protection for the pipes. The sections of pipeline where fill material has been piled up above the old ground level should be checked each year in the Fall, and any erosion should be repaired to ensure proper cover for the pipe during each winter.

The precautions to be taken this winter to keep water running in the pipelines should not be relaxed until there is no doubt that all frost has emerged from the pipeline.

The work on the water and heating systems inside the school has been completed. Sufficient heat should be maintained during the winter to protect the radiators and water system within the school.

AIR MAIL

Regina, January 31st, 1949.

Indian Affairs Branch, Department of Mines & Resources, OTTAWA.

Attention of Colonel Neary

You will recall that a horizontal boiler which was ordered by the late Mr. Chris Simonson for use at the Gordon's Indian School was not used as it was recommended by the Department of Public Works Engineer that a vertical boiler would be more suitable because of a lack of space in which to install the boiler.

I received a telephone call today from a Mr. McKee, of Western Supplies, Saskatoon, asking me whether or not our Department have actually taken over this boiler for use at some other point. I have not been personally advised as to the decision of the Department, and had to so inform Mr. McKee. It would appear that Mr. McKee's interest now is in the fact that the lawyers who are endeavouring to settle the estate of the late Mr. Simonson have been informed by Mrs. Simonson that the amount of $932.86 is still owing by our Department on the boiler, and she wished to assign her interest therein to Western Supplies in settling her account with them.

There has been some considerable correspondence between this office and the Department in connection with the boiler, but, so far as I am aware, no definite decision has been made. I do not know of any place at the present time where the boiler could be used. However, there is no doubt that it might be used at some time in the future at one of our residential schools.

Memorandum:

DIRECTOR, LANDS & DEVELOPMENT SERVICES BRANCH

Re: Gordon's Indian Residential School - No. 654

We have now placed this school in a good state of repair, largely due to the careful planning and supervision of your Engineering and Construction Division. We have been advised that the engine for the lighting plant is now too small to carry the lighting load at the school. This engine is a 12-HP Diesel Electric Plant, 8 kilowatt 110 volts, D.C., and we will be able to use it as a spare at another school.

However, we would appreciate having your advice as to the type and size of engine for the lighting plant which you would recommend in view of the increased requirements at this school.

Dear Sir:-

Re: Gordon's Indian Residential School

Thank you for your letter and memorandum of February 4th, in relation to the above mentioned school.

The Administration is searching for a certified engineer for Gordon's at the moment. We have applications from men with families but unfortunately there are no married quarters available for such men at the school.

The Principal has been instructed to note carefully the instructions given in paragraphs six, seven and eight of the memorandum.

Gordon's now is one of the finest school buildings of which we have the use and every effort will be made to re-open with a full and competent staff.

Thank you for your interest on our behalf.

Yours faithfully,

Henry G Cook.

Re: Gordon's Indian Residential School,
Water Supply.

A contract was let to R.B. McLeod & Company Ltd. for a water supply system in connection with Gordon's Indian Residential School, Punnichy, Saskatchewan, at an estimated cost of $16,555.65 based on firm unit prices, quantities estimated. Materials purchased as government issue total $7,233.01 to date, and quantities exceed original estimates by a considerable margin, making it necessary to ask for an additional $1500.00 in the current fiscal year. The allotment is now $26,781.38, made up as follows:

Original allotment	$25,000.00
Transferred from Plumbing job	1,781.38
	$26,781.38
Estimated requirements to March 31, 1949	$28,281.38
Additional amount required for 1948-49 season	$ 1,500.00

To explain the transfer from plumbing job, an amount of $38,000.00 was alloted to the plumbing and heating job under contract to William George & Company. The contract was completed at a cost of $36,218.62 (total cost, 1947-48 expenditures included, was $50,704.74). The two projects, (1) plumbing and heating, (2) water supply, were alloted funds in the same vote, primary, establishment, and in view of the fact that the surplus of $1,781.38 for the plumbing job was needed for the water supply system, we transferred the funds from job to job without affecting the vote-primary-establishment total allotment of $63,000.00. (Plumbing $38,000.00, water supply $25,000.00).

The water supply system will not be completed by March 31, 1949, and additional funds will be needed in the 1949-50 fiscal season. We will have an estimate of 1949-50 requirements very soon, and you will be kept informed.

OTTAWA, March 4, 1949.

Memorandum

Re Installation of Domestic Water Supply,
R.B. McLeod and Company Contract,
Gordon's Indian Residential School, Sask.

Under date of October 12th, 1948, a contract was executed between the Department and R.B. McLeod and Company of Saskatoon, for the installation of a domestic water supply to the Gordon's Indian Residential School.

Authority for the execution of the contract was obtained under Order in Council P.C. 4221 dated September 22nd, 1948.

Although bids were invited from six firms, only one tender was received and this was submitted by R.B. McLeod and Company on the basis of a lump sum price for the intake timber structure and unit prices for the excavation and other items.

The specifications for Excavation and Backfilling of the Pipe Trench provided that payment would be based on cubic yards of material but the pay quantities would be figured for a trench only two feet wide irrespective of the width actually excavated. This provision was considered necessary as it was impossible to know beforehand what width of trench would be excavated by the particular machine available to the successful bidder and generally at least, a two-foot width of trench was considered necessary. R.B. McLeod and Company bid on the work under these conditions and their bid was accepted.

During the course of the work, it was discovered that much hardpan and many boulders were excavated in the trench which were not expected by the engineer, and a trenching machine excavating a trench three feet wide was necessary and was used by the Contractor.

A demand for special consideration has been made by the Contractor and our Resident Engineer, Mr. Peatfield, has recommended, with the support of Mr. Cornish, that the Contractor be allowed yardage for his trenchwork, based on a three-foot wide trench which was actually excavated and to ignore the specifications which limited the figuring of the trench quantities to a width of two feet.

Due to the fact that the work was more difficult than expected and also due to the fact that it was necessary to work under adverse conditions, this recommendation is concurred in. The Contractor made a genuine effort to do this job as we require it to be done under a unit price contract, and was the only contractor who would accept such a contract.

Indian Affairs. (RG 10, Volume 6310, file 654-5, part 5)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

Library and Archives Canada / Bibliothèque et Archives Canada
www.collectionscanada.gc.ca

The cost of the three-foot wide trench will be $10,677.60 (6.673.5 cu.yds. at $1.60), as compared with $7,118.40 (4,449.0 cu.yds. at $1.60) figured on the basis of a two-foot wide trench. Allowing the Contractor payment on the basis of a three-foot wide trench (actually excavated) will thus increase the cost by $3,559.20.

We understand from Col. Neary of Indian Affairs that this extra payment could be made for this fiscal year from present Indian Affairs funds, but would require a Treasury Board transfer.

As the burning of brush along the pipeline right-of-way and the tidying up of the excavation was not completed by the Contractor, due to difficulties caused by the adverse weather, it will be necessary to holdback $1000.00 from the Contractor this fiscal year and this sum will have to be provided in the Supplementary Estimates of Indian Affairs for 1949-50, plus $100.00 for other expenses, or a total of $1100.00 to ensure that the work will be completed.

Kindly advise if we have approval to disregard the specifications for the trench excavation and to pay for the material actually excavated, which will result in an additional payment to the Contractor of $3,559.20. As a Treasury Board transfer is involved and a further Order in Council will probably be required, we should be pleased to receive this approval as soon as possible so that the extra payment can be made from current funds.

1948-49 = 3559.20
1949-50 = 1100.00

Gordon's (Anglican) Indian Residential School

Punnichy, Saskatchewan

COMMUNICATIONS TO BE ADDRESSED TO THE PRINCIPAL

March 19th 1949.

2944

Colonel Bernard Neary.
Minister of Wellfare.
Indian Affairs Branch.
Ottawa. Ont;

Dear Colonel Neary;

I am sorry to be bothering you again I have been trying this past two years to get The Deptment to take action about our Lighting Plant at Gordon's School. The Witte Engine is of no use as it is broken down and when I have had it fixed it only runs a little while before somthing goes again. and if alright it will not carry the load we have.

The Lister engine also is too light to carry our load and has given me a lot of trouble does not run long before somthing goes and then there is the trouble delay and expence of getting repairs . There was quite a sum spent on it a month or two ago and we have had several minor expences and now it is gone again and I have to get more repairs and expence besides being without light and power while these repairs are in hand.

I shall be going back to Gordon's next month and am anxious to get the school in shape for takeing the children again. Thanking you.

Yours faithfully;

Fred A. Mayo.

Memorandum:

Mr. T. S. MILLS,
Chief Engineer,
Engineering and Construction Division,
Lands and Development Services Branch.

Gordon's Residential School -
Lighting Plant.

On February 16 we forwarded a memorandum concerning the new lighting plant required at this school. We have just received a letter from the Principal reading as follows:

"I am sorry to be bothering you again. I have been trying this past two years to get the Department to take action about our lighting plant at Gordon's School. The Witte Engine is of no use as it is broken down and when I have had it fixed it only runs a little while before something goes again, and if alright it will not carry the load we have.

"The Lister engine also is too light to carry our load and has given me a lot of trouble does not run long before something goes and then there is the trouble delay and expense of getting repairs. There was quite a sum spent on it a month or two ago and we have had several minor expenses and now it is gone again and I have to get more repairs and expense besides being without light and power while these repairs are in hand."

Bernard F. Neary,
Superintendent of Education.

Mr. F. A. Mayo,
Principal,
Gordon's Indian Residential School,
Punnichy, Saskatchewan.

Dear Mr. Mayo:

I have for answer your letter of March 19 concerning the Witte Diesel engine. Please find attached copy of a memorandum which I sent to the Lands and Development Services Branch on February 16 in connection with this lighting problem. I am again writing to them requesting haste in advising on the type and size of engine required at your school.

Canon Cook her reminded me several times about this matter and you can rest assured that we have not forgotten it.

Sincerely yours,

Bernard F. Neary,
Superintendent of Education.

Original forwarded to Mr. Gibson

Certified to be a true copy of a Minute of a Meeting of the Committee of the Privy Council, approved by His Excellency the Governor General on the 5 April 1949.

8763

The Committee of the Privy Council have had before them a report dated 15th March, 1949 from the Minister of Mines and Resources, representing:

That under authority of Order in Council P.C. 4221 dated September 22, 1948, a tender from R. B. McLeod and Company Limited of Saskatoon, Saskatchewan, was accepted for the installation of a Domestic Water Supply System for the Gordon's Indian Residential School near Punnichy, Saskatchewan, in the amount of $19,153.99, and a contract on the basis of unit prices and a lump sum was executed;

That due to the nature of the material encountered, it was necessary to excavate a three foot wide trench, which increased the estimated excavation;

That the total cost of carrying out the above work including contingencies and engineering supervision will now approximate Twenty Seven Thousand Five Hundred Dollars ($27,500).

The Committee, therefore, on the recommendation of the Minister of Mines and Resources, advise that authority be granted to pay the additional cost of the work amounting to approximately $8,346.01, chargeable to Vote 772, Education, Indian Affairs Branch, in the Supplementary Estimates for 1948-49.

MEMORANDUM

Re: Gordon's Indian Residential School,
Punnichy, Saskatchewan.

In reply to your marginal notation of the 5th instant appearing on Major MacKay's memorandum to you of April 2nd in connection with the lighting plant at the above school, we make the following comments:

In 1946 the Indian Affairs Branch purchased a new Witte Lighting Plant which, it is reported, has been giving considerable trouble. Considerable repairs have been made on the engine since its installation, and it is further reported that even when the prime mover is operating satisfactorily, the unit is not of sufficient electrical capacity to handle the loads imposed on it.

This Division was verbally requested by Colonel Neary to express an opinion on this unit before the purchase was made, and he was advised that an investigation of the electrical situation would be necessary before we could make any comments. We discussed the question of capacity by telephone with Mr. Forward, an officer of the M.S.C.C., whom we were informed, was well acquainted with the requirements at the school, and he assured us that the proposed unit was sufficiently large to handle the electrical loads at the school. We were not requested to investigate the electrical situation at the school and did not, therefore, take any further action in this matter.

We do not have any information on our file regarding the electrical situation at the school with the exception of copies of correspondence between the Indian Affairs Branch, the Saskatchewan Regional Supervisor of the Indian Agencies, and the Suppliers of the Witte generating unit purchased.

Before we can make any recommendations, it will be necessary to have complete data on the electrical requirements, and to this end we have requested Mr. W.W. Perrie, who left Ottawa for the West on April 11th, to make an inspection and submit a report. Mr. Perrie advised that he expects to be able to carry out this work in the very near future, and upon receipt of his report, Indian Affairs Branch will be further advised.

Copy - Major MacKay

Ottawa, April 19, 1949.

The Deputy Minister

Installation of Domestic Water Supply,
R.B. McLeod and Company, Contractor,
Re - Gordon's Indian Residential School
Punnichy, Saskatchewan

Under date of April 13th Mr. Jackson addressed a query to Major MacKay as to the necessity for the increased cost in connection with the above contract. I am quoting from a report from our Engineer as follows -

"Although bids were invited from six firms, only one tender was received and this was submitted by R.B. McLeod and Company on the basis of a lump sum price for the intake timber structure and unit prices for the excavation and other items.

"The specifications for Excavation and Back-filling of the Pipe Trench provided that payment would be based on cubic yards of material but the pay quantities would be figured for a trench only two feet wide irrespective of the width actually excavated. This provision was considered necessary as it was impossible to know beforehand what width of trench would be excavated by the particular machine available to the successful bidder and generally at least, a two-foot width of trench was considered necessary. R.B. McLeod and Company bid on the work under these conditions and their bid was accepted.

"During the course of the work, it was discovered that much hardpan and many boulders were excavated in the trench which were not expected by the engineer, and a trenching machine excavating a trench three feet wide was necessary and was used by the Contractor.

Indian Affairs. (RG 10, Volume 6310, file 654-5, part 6)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

Library and Archives Canada / Bibliothèque et Archives Canada
www.collectionscanada.gc.ca

Due to the fact that the work was more difficult than expected and also due to the fact that it was necessary to work under adverse conditions, this recommendation is concurred in. The Contractor made a genuine effort to do this job as we require it to be done under a unit price contract, and was the only contractor who would accept such a contract."

This will, I think, cover the information desired.

R. A. Gibson,
Director.

, April 25, 1949.

Dear Mr. Mayo:

Lighting Plant.

You will recall previous correspondence concerning the lighting plant at your school. As you are aware, this plant was purchased at the request of Mr. Forward of the M.S.C.C., and it was presumed at that time that it would be sufficiently large to handle the lighting of the school.

The Lands and Development Services Branch have today advised that Mr. W.W. Perrie, one of their engineers will visit this school in the near future and submit a report as to electrical requirements there. When this has been done, we can prepare a requisition for the new Diesel engine required.

The whitte machine will be available as a spare replacement for other residential schools in Saskatchewan. Mr. Ostrander will, no doubt, write to you directly as to what he wishes done with it.

Sincerely yours,

Bernard F. Neary,
Supt. of Indian Education.

Ottawa, Ont.

Dear Colonel Neary:

Re: Gordon's School

The following letter was received today from Mr. Mayo of Gordon's:

"In reply to your letter of April 6th re coal for next winter. While in Winnipeg I was talking to Mr. Davis Regional Inspector. He said if Elkhorn was closed this summer there was a stoker there that would be pulled out and would do for Gordon's. Could you discuss this with The Indian Affairs Branch and see if they would sanction that or if they intend to install the stokers as was talked about last year. I would need to have this information before ordering our fuel supply."

It would be appreciated if the stoker and necessary equipment could be transferred and set up atGordon's as Mr. Mayo suggests.

Yours faithfully,

(sgd) Henry G. Cook.

Superintendent.

Dear Colonel Neary;

Many thanks for your letter of April 25th. re lighting plant and stating that Mr.W.W.Perrie will behere shortly to advise on what we need.

As I have to be away at times for half a day and sometime a whole day. would it be possible for you to ask Mr Perrie to drop me word when he would be likely be here I would not like to be away when he comes. I am sorry to trouble you to do this but as I do not know where he might be I cannot write him direct. thanking you.

Yours faithfully;

Fred. A. Mayo.

654-5 (E.1)

23rd May, 1949.

Mr. J.P.B. Ostrander,
Regional Supervisor of
Indian Agencies,
Regina, Saskatchewan.

We have your letter of the 17th instant, your file 1157-6-11-121, enclosing a requisition in connection with the painting of the farm buildings, roof and doors in the school building at the Gordon's Residential School, at a total cost of $1,101.25.

In your letter of March 26th you wrote to us about the engine for the lighting plant at the Gordon's School. This was referred to the Lands & Development Services Branch and they promised to send one of their engineers to the school. We have not yet received his report, and consequently, we are not aware of the expenditure that will be required. Under separate cover we are authorizing an expenditure for fire protection.

With the above in mind, we are not prepared to authorize at the present time any funds for the painting requested in your letter of May 17th.

Bernard F. Neary,
Supt. of Indian Education

Memorandum:

DIRECTOR,
LANDS & DEVELOPMENT SERVICES BRANCH

Re: Gordon's Indian
Residential School -
Your File: 1580-4

In your memorandum of April 13th you advised that Mr. W.W. Perrie would visit the above school in connection with the lighting plant.

We have recently been advised that Mr. Perrie has not visited this school. We would appreciate it if you would arrange to have him visit this school and submit his report as soon as possible.

Regina, May 18th, 1949.

Indian Affairs Branch, Department of Mines & Resources, OTTAWA.

Please refer to Department letter dated October 14th, 1948, File 654-5 (E.1), in connection with the request for a walk-in refrigerator for the Gordon's Indian Residential School, also to my letter dated October 8th, 1948, File 1977-3-2-11 AC. with which was forwarded a requisition and tender for the J.H. Ashdown Hardware Company for this equipment.

Enclosed herewith is a requisition received from Mr. A.R. Nixon, in charge, Touchwood Agency, amounting to $1079.00 for the walk-in refrigerator in accordance with the specifications and tender.

As the tender is in the hands of the Department, I am forwarding the requisition herewith for further consideration and would recommend that it be supplied in sufficient time for the opening of the Gordon's School on September 1st, 1949, if funds are available for the purpose.

PLEASE QUOTE
FILE 1247-6-11-121

22571

Regina, May 28,1949.

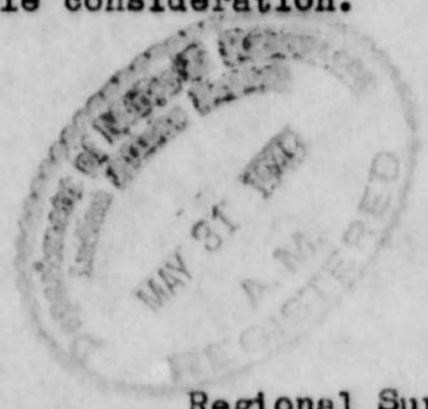

Indian Affairs Branch,
Department of Mines & Resources,
OTTAWA, Ontario.

With further reference to my letter 1169-6-11-121 of May 18th and previous correspondence regarding an electric walk-in refrigerator for Gordon's Indian Residential School.

The J.H. Ashdown's offer of $1079 for the refrigerator was submitted last year, but on taking the matter up with the Ashdown Company they have, on date of May 23rd, 1949, confirmed the previous offer of $1079 and furnished the enclosed specifications regarding a walk-in refrigerator unit.

Labour in connection with preparation of the room which they propose to use will be approximately $50.00. Acting Superintendent Nixon has prepared a new set of Requisitions covering the refrigerator at $1079 and the labour at $50.00 making a total of $1129.00.

I would recommend that this proposition be given favorable consideration.

H.F. Scovill

OTTAWA, Ontario.

I am enclosing herewith Acting Superintendent Nixon's letter covering his Requisitions for a spray painting outfit and a motor to operate the same.

It would seem from the last paragraph of Mr. Nixon's letter that Mr. Mayo has contacted Colonel Neary about this matter previously. In any case spray painting is much more economical for some types of work and I would recommend that this outfit be purchased.

Memorandum

Re: Gordon's Indian Residential School,
Punnichy, Saskatchewan.

In reply to your marginal notation of the 26th instant appearing on Major MacKay's memorandum to you of May 23rd, you are advised that we do not have any information as to when Mr. W.W. Perrie will be in a position to submit his electrical report on the above. Prior to leaving Ottawa on April 11th last, he advised this Division that due to the close proximity of the school to his headquarters, he expected to make his inspection shortly after his arrival in Regina.

We promised Mr. Perrie that blueprints of the school would be forwarded to him at an early date and he informed us that if they did not arrive by the time he visited the school, he would proceed with his investigation and mark the information on the prints upon his return to his headquarters. Two sets of blueprints were forwarded to Mr. Perrie under cover of our memorandum of April 19th last.

We are writing Mr. Perrie in connection withthis matter today, and a copy of our letter is attached hereto for your information.

re:GORDON'S RESIDENTIAL SCHOOL

Dear Colonel Neary:-

I have had the opportunity today of a chat with Mr. Mayo about some matters concerning the operation of his School. He reports that, to date, the contractor has not returned to fill in the ditches properly. You know they were only partially refilled last autumn because of the snows. Children are moving into the School first of July and it will be dangerous to leave these ditches in their present condition.

Mr. Mayo also reports that the water is of fine quality but quite hard and mineral. If the taps are unused for a day rust colored water backs up in the pipes and takes quite a time to run off. If water is left standing in dishes or pans a scum of rust forms at the waterline and stains. Mr. Ostrander has requested Mr. Mayo to get an estimate on a water softener and the information has now been given into Mr. Ostrander's hands.

It would be appreciated if some action could be taken in relation to the two above-mentioned matters.

Yours faithfully,
Henry G Cook.
Henry G. Cook.

P.S. Mr. Mayo also reports that, to date, Mr. Perry has failed to visit the School in connection with the diesel-electric plant. HGC.

re; GORDON'S LAUNDRY EQUIPMENT

Dear Mr. Davis:-

Mr. Mayo came over from Gordon's today and he reports that the laundry equipment at present in the Gordon's School is in very poor mechanical condition and that the laundry equipment here at Elkhorn is far superior to theirs. In our talks yesterday you figured that the equipment at Gordon's was in fair shape and that therefore the equipment here was not needed there. It now appears that it would be wise to have the laundry equipment taken from Elkhorn to Gordon's. With an expected pupilage of 120 pupils we do not want to run the risk of having a break-down in the laundry department. As Colonel Neary told me before leaving Ottawa that any equipment at Elkhorn ~~that~~ we needed in one of our schools could be moved, I ask that this be done. We are quite prepared to use the School truck for the moving job but wish your OK before taking the equipment out.

Yours faithfully,

HGC.

Henry G. Cook.

Colonel B. F. Neary,
Supt. of Indian Education,
Indian Affairs Branch,
Dept. of Mines & Resources,
Ottawa, Ontario.

Dear Colonel Neary:

Gordon's School, Punnichy Sask.
Ironer for Laundry

On 16th October, 1948, Mr. Mayo, Principal of Gordon's School wrote your local agent, Mr. Simpson, as follows:

" We have no facility in our laundry for ironing. The laundry stove here is broken and not safe to use for heating flatirons and those of which are here are done for.

There is as you know such a lot of laundrying to get through in our schools. A flat ironing machine such as I have submitted to you in the list would be a great help to us in cutting down the labour for the laundry matron and girls.

If you could obtain approval to purchase one of these I could have it installed at the time they are putting in the high pressure boiler."

He followed the above letter with a requisition, dated 19th October, 1948, to Mr. Simpson on your Form 37a for -

"1 only 48" 4-rolled flat work ironer, complete with motor $528.00
Prices quoted by The Laundry Machinery Company,
Winnipeg, Manitoba."

Will you please advise us as to what action, if any, has been taken in the matter of supply of this equipment.

Yours sincerely,

for Henry G. Cook,
Superintendent.

Dear Colonel Neary:

Painting of Barns
Gordon's School, Punnichy, Sask.

The following is an extract from a memo received from Canon Cook during his recent trip to the West:

> "Barn buildings at Gordons all badly in need of paint. Shingles particularly need stain. Seems a shame to allow good buildings to dry out and weather."

In our letter of 1st September, 1948, (Our File Est. 49-50), to which your 121-1-5 (E.1) of 3rd September, 1948, was a reply, we asked that provision be made in your 1949-50 estimates for "repairs and painting of outbuildings and painting interior of the School", pointing out that our Principal, Mr. Mayo, had already requisitioned on your local agent for the necessary paint, lumber, etc. for delivery in the spring of 1949. Mr. Mayo followed up that requisition with another on your Form 37a dated 25th April, 1949.

Will you please advise us what you propose to do in regard to these services.

Yours sincerely,

per Henry G. Cook,
Superintendent.

DIRECTOR, LANDS & DEVELOPMENT SERVICES

Re: Installation of Domestic Water Supply,
Gordon's Indian Residential School,
Your File: IA-1580-4

With reference to your memorandum of March 4th and previous correspondence regarding the above, we have today received the following letter from Reverend Canon H.G. Cook, Superintendent of the M.S.C.C., who is at present in Western Canada.

"I have had the opportunity today of a chat with Mr. Mayo about some matters concerning the operation of his school. He reports that, to date, the contractor has not returned to fill in the ditches properly. You know they were only partially refilled last autumn because of the snows. Children are moving into the school first of July and it will be dangerous to leave these ditches in their present condition.

Mr. Mayo also reports that the water is of fine quality but quite hard and mineral. If the taps are unused for a day rust coloured water backs up in the pipes and takes quite a time to run off. If water is left standing in dishes or pans a scum of rust forms at the waterline and stains. Mr. Ostrander has requested Mr. Mayo to get an estimate on a water softener and the information has now been given into Mr. Ostrander's hands.

It would be appreciated if some action could be taken in relation to the two above-mentioned matters."

Indian Agencies,
304 Post Office Bldg.,
Regina, Saskatchewan.

Re: Gordon's Indian Residential School
Your File: 1163-6-11-121

In your letter of May 17th you forwarded a requisition for an ironer for this school, and we submitted the request to the Departmental Purchasing Agent. He now requires the following additional information:

1 - Whether the ironer is heated by electricity or steam.
2 - Whether D.C. or A.C. cycle. If A.C., and voltage.

Since receipt of your requisition we have had some correspondence from Regional Supervisor Davis with regard to transferring equipment from the Elkhorn Residential School to the Gordon's Residential School. We are not certain if there is an ironer at the Elkhorn School, but Mr. Mayo, Principal of Gordon's School, must have this information. Consequently, when obtaining the information requested by the Departmental Purchasing Agent, you should ascertain from Mr. Mayo if the situation has changed since the requisition was sent for the ironer. Possibly, we will not have to purchase an ironer for Gordon's.

OFFICE OF THE DIRECTOR

CANADA

DEPARTMENT OF MINES AND RESOURCES

27222

LANDS AND DEVELOPMENT SERVICES BRANCH

Ottawa, June 17, 1949.

Attention Colonel Neary

Dear Sir:

Re: Water Supply - Gordon's Indian Residential School.

The Engineering and Construction Division estimated last March that 1949-50 requirements would be approximately $1100.00 to complete the above project. There was a $1000.00 holdback on the R.B. McLeod and Company Limited Claim No. 3 dated March 31, 1949, to ensure that the brush would be burned and the excavation tidied up during the early summer months. You no doubt had the $1100.00 in your supplementary estimates, and since supplementary estimates were not presented we presume a transfer of funds will be necessary.

Present indications are that $1500.00, instead of $1100.00, will be required as follows:

1 - Holdback	$ 1000.00
2 - Engineering Expenses	100.00
3 - Contingencies	400.00
Total -	$ 1500.00.

The item for contingencies, $400.00, should be the maximum. The exact amount will not be known until we have Mr. W.W. Perrie's report, and if the transfer of funds to the Engineering and Construction Division does not entail a submission to Treasury Board, we suggest that an encumbrance for $1100.00 only be forwarded, to be followed later on by transfer of whatever additional amount, up to $400.00, may be required.

Yours truly,

D. M. MacKay, Esq.,
Director, Indian Affairs Branch,

QUOTE FILE 1A-1580-4

416 Post Office Bldg.,
Regina, Saskatchewan,
June 22nd, 1949.

RE: Gordon's Indian Residential School,
Punnichy, Saskatchewan. Attention: MF. Chas. H. Buck.

Inspection of the electrical system at the above school was made on June 9, 1949, and the following is submitted for your information and consideration:

The population of the school, including pupils and staff is normally about 160, accommodated in the School Building, Principal's Residence and Foreman's Residence. The buildings, together with the Horse Barn, Cow Barn, Piggery, Machine Shop, Chicken House and Brooder are lighted and serviced from a generating plant located in the School Building.

The generator room is at present equipped with the following engines and dynamos:

1 - Witte Diesel Electric Plant, Generator and Switch.
1 - Lister Engine Dynamo, semi-diesel.
1 - Wisconsin Gas Engine and Motor (for laundry power).

The Witte Dieselelectric Plant details are as follows:

Engine - No. D-[illegible], Model WD, 12 H.P. Speed 720, Bore 5", Stroke 8".
Generator No. 7992-1, KW8, Amps 73, D.C. Volts 115, R.P.M. 1800, Type 1243, Ph. D.C.
Switch - Serial No. 58-6298W, Model No. 61[illegible]2, Size 8000 W, Volts 110, Type D.C.

The Witte Plant was installed in 1946, but it has been out of commission for some time. The pistons in the engine are reported to be scored and the whole unit requires a general overhaul.

The Lister Plant, which is generating the power at the present time, is very much overloaded. The details relative to this plant are as follows:

Lister Engine Semi-Diesel
Plant No. 3007 L.B. K.W. 7.5,
Dynamo No. 100 5A158 R.P.M. 600, Volts 110,
Amps 68.5, 14 H.P.

Lister Dynamo
No. 100 5A 158, Volts 110, Amps 68.5 R.P.M. 600.

This unit was installed about 1939 and is reported to have been overhauled about two years ago. The engine head is said to be warped and the engine is now leaking oil badly. A general overhaul is apparently required. The performance of the unit has been unsatisfactory for some time, due to the overload being carried, and the overhaul will have to be complete.

The above unit is connected with 54 batteries, each battery of 2 volts. Originally there were 56 batteries but two were broken (blew up). All batteries have a small amount of sediment in the bottom of each jar; the terminal posts are in bad shape and should be fitted with new nuts and the spacers are warped in about half the jars.

The engine runs about 10 hours per day in the winter months.

QUOTE FILE 1A-1500-4

Attention: Mr. Chas H. Peck.

RE: Gordon's Indian Residential School, Punnichy, Saskatchewan. OTTAWA

The fuel supply system consists of two 20 gallon tanks outside the building, but these tanks have not been in use for some time. Fuel is carried into the generating room in small drums and supplied to the engines from small hand containers.

The Wisconsin Engine and Motor, is a 3 H.P. Unit, air-cooled, type A.F.H. Size 3½h, No. 141996, run by gasoline.

The unit was used some time ago for power in the laundry room, the laundry room equipment being operated from a line shaft which extended into the generating room. This system of operation has now been discontinued and the laundry room equipment is operated by small motors (electric) which are connected to the various appliances. These motors are as follows:

1 - 3 H.P. on line shaft
1 - 1/2 H.P. for Ironer
1 - 1/4 H.P. for Pump

The Wisconsin Engine and Motor is now only used as a stand-by and can be used for that purpose.

Additional motors are in use, or required as follows:

Motors in Boiler Room

Fairbanks-Morse Pump, 2 H.P. - 16.8 Amps, Speed 1750 R.P.M. 115 volts, Serial No. X52154. This unit pumps from the gravity supply tank, 10'x10'x10', outside of the building, to two 900 gallon tanks located in the boiler room.

Leland E.C. Motor for pumping from heating system return. Frame No 54 DACV, 1 H.P. 115 Volts, 1725 R.P.M. 8.8 Amps.

Dunham Vacuum Pump, Size VH5, Serial No. C25483, Float Control.

Required:

1 - 1 H.P. Motor for use with Cream Separator
1 - 1/4 H.P. Motor and Pump for use in Foreman's Residence.

It is also proposed to instal a walk-in refrigerator room in the school basement and the necessary power will have to be provided for this purpose.

The lighting arrangement, wiring and location of lighting panels are generally as shown on the wiring plans. Lighting cabinets or panels are located in the School Building as follows: One in basement containing six switches; two on ground floor with five and three switches respectively; two on first floor each with five switches. All switches are in good condition, with the exception of those in panel No. 2 on the first floor, where the push buttons are loose and should be repaired.

The wiring in the School Building and Principal's Residence is, as near as can be determined, all in good condition, but that in the barns and other out buildings will have to be replaced either wholly or in part.

QUOTE FILE 1a-1560-4

Attention: Mr. Chas. H. Buck

RE: Gordon's Indian Residential School, Punnichy, Saskatchewan. OTTAWA

The total light demands are as follows:

School Building, basement	3520 Watts
School Building, ground floor	4200 "
School Building, first floor	2980 "
School Building, second floor	920 "
Principal's Residence	420 "
Foreman's Residence	460 "
Horse Barn	200 "
Cow Barn	480 "
Piggery	280 "
Total	13460 "

In addition to the above the principal requests that alarm bells and lights be installed at each fire escape exit. Lights are also needed in the Chicken House and Brooder — 2 40-Watt and 1 60-Watt respectively.

With appliances that might be used, the total lighting requirements if all lights were in operation at the same time may be estimated at 14000 Watts and the various motors require a total of 8 H.P.

It is evident from the above that neither the 8 K.W. "Witte" unit or the 7.5 K.W. "Lister" unit has the capacity to meet the needs of the school, although one of them might serve as a stand-by unit when properly overhauled. It is impossible to furnish an estimate covering the cost of overhauling either unit at present as each would have to be torn down before any satisfactory estimate could be obtained.

When dealing with the supply of electrical energy at this school consideration may be given to each of the following:

(1) The replacement of one of the present D.C. units with a new one of larger capacity, and the use of the other as a stand-by unit. I have been unable to obtain any definite figures as to the cost of such a new unit together with batteries, etc., but no doubt your electrical expert will have at his disposal the information necessary to compile such an estimate. The cost would no doubt be at least equal to that mentioned in (3) below.

(2) The construction of a transmission line to connect the school with the transmission line of the Saskatchewan Power Commission at Punnichy, a distance of 6.5 miles and the purchase of power from the Commission. Arrangements to this end could doubtless be made, but as the school would be the only user of the line to be constructed, the Power Commission would not be too keen about the project. The cost of constructing the necessary transmission line is estimated at $1200.00 to $1400.00 per mile, with an additional $400.00 to $600.00 expenditure for transformer, etc., at the outlet end. This would require an expenditure of approximately $9,000.00 to bring the power to the school, with no provision for stand-by service in the event of a breakdown at the plant of the Power Commission. As suggested under (1) one of the present units (preferably the "Lister") could be repaired and used for emergencies.

Attention: Mr. Chas.
H. Bell

re: Gordon's Indian Residential School,
Punnichy, Saskatchewan.

OTTAWA

(3) The installation of an alternating current plant, a 1 phase, 60 cycle, 10 K.W. continuous, 120/240 volt diesel electric plant would take care of the requirements of the school for some years to come and can currently be obtained at a cost of $4,573.00 f.o.b. Regina, Sask. The necessary accompanying cabinet for use with such a plant is currently priced at $50.00 f.o.b. Regina, with an additional $10.00 for the switch between the generator and distribution system. The cost of rewiring the present motors for alternating current would amount to approximately $500.00. The cost of replacing the present generating plant with the AC unit, including transportation and installation charges, should therefore not exceed $5,000.00. The "Lister" plant could be used as a stand-by with the motor rewound or changed to AC current.

Regardless of which of the above alternatives is decided upon there will have to be provision for an expenditure of approximately $600.00 to cover the replacement of poles in the lines from school to out buildings, new wiring on sections of the lines and inside the buildings and the provision of the new motors required.

W. W. Pearce,
Superintending Engineer.

PLEASE QUOTE
FILE 1564-8-8-121

Regina, June 24th, 1949.

Indian Affairs Branch, Department of Mines & Resources, OTTAWA.

Mr. W.W. Perrie, Supervising Engineer, Engineering and Construction Division, visited the Gordon's Indian Residential School recently to report on the electrical system. As his report went direct to Mr. Charles H. Buck, I am enclosing a copy of it herewith for the information of our Branch.

I am also enclosing a requisition covering suggestion No. 3 in Mr. Perrie's report, being a 1 phase, 60 cycle, 18 K.W. continuous 110/120 volt diesel electric plant and other incidentals in connection with the installation of the same.

As the time is near for re-opening of the Gordon's School, and the electrical system cannot be operated without the immediate supply of either the motor suggested and shown in the requisition, or connection with the power line, I would recommend that immediate action be taken toward the purchase of the motor.

While connection with the power line, at a cost of probably $9,000.00 would ultimately be much more convenient, we would still have to have an auxiliary unit because of power failures from time to time. If we eventually decide to connect with the power line, the power unit now being requested would serve as an auxiliary unit.

Re: Gordon's Residential School

Your file I.A. 1580-4

I desire to refer to your memorandum of June 1st with reference to the electrical report which you hope to receive from Mr. W.W. Perrie.

We have just received a letter from Regional Supervisor Ostrander advising us that Mr. Perrie visited the Gordon's school on June 9th.

No doubt, you have received Mr. Perrie's report, and we would appreciate it if you would let us know as soon as possible if any further expenditure is required. If there is any additional work to be done, we would like to have it completed in the near future, so that the school will be ready to accept pupils by September 1st.

Acting Director.

Re: Gordon's Residential School

Your file 1564-8-8-121

We have your letter of June 24th enclosing a copy of a report from W.W. Perrie regarding the electrical system at the above school.

Since receipt of your letter we have been in touch with the Lands and Development Services and they promised that they will make a definite recommendation in the matter before the end of the current week.

As soon as we hear from them you will be advised.

Bernard F. Neary,
Supt. of Indian Education.

Regina, July 5,1949.

Indian Affairs Branch,
Department of Mines & Resources,
OTTAWA, Ontario.

With reference to your letter of June 22nd, 654-5(E.1) regarding an ironer for the Gordon's Indian Residential School.

I requested the information from Mr. Mayo, Acting Principal, as outlined in your letter, but the only information he has given me is that he would rather have a steam ironer for two reasons: the present laundry layout would make it very easy and economical to connect an ironer to the steam line, and the operating costs with steam would be lower than electrical heating.

I do not think the Purchasing Agent should make any definite commitments as to the purchase of a new ironer until the equipment from Elkhorn School has been checked to see if suitable equipment can be obtained from that source. Another major reason for delaying purchase is the uncertainty of the electrical power at Gordon's, which at the present time is 110 Volts, D.C., but Mr. Perrie of the Survey and Engineering Branch has recommended a 60 cycle, A.C. plant be installed. As soon as these two points are difinitely decided, action should be taken regarding the ironer.

Indian Affairs Branch,
Ottawa, Ont.

The expenditure in the attached voucher was for dynamiting a crumbling rock wall of the old Gordons Residential School, which I considered dangerous to the safety of children and livestock.

I would have waited to get authority before starting the work, but when I took Mr. Tucker down to see the job we thought it a small piece of work which would not involve an expenditure of more than $10.00. However a part of the wall was very solid, taking many charges of dynamite. I was with Mr. Tucker when the work was done and consider the charge very reasonable, and recommend the voucher be paid.

A.R.Nixon,
Acting Supt.

Memorandum

Re: Gordon's Indian Residential
School, Punnichy, Sask.

In reply to your marginal notation appearing on Acting Director D.J. Allan's memorandum to you of the 6th instant, you are advised that additional electrical equipment will be required at the above school, which we believe will amount to an expenditure of approximately $7,000.00.

We are investigating Mr. Perrie's report of his recent inspection, and upon completion, we will make our recommendations for the required work together with specifications for the purchase of the necessary electrical equipment for transmission to the Indian Affairs Branch.

From letter from Principal, Gordon's Res. school.

~~I am writing you this letter instead of appealing to Colonel Neary again~~. Our lighting engine has broken down again and here we are without any power for light or water. It was bad enough without anyone in the building but now we have people and children in the school it is no joke. I don't know if we can fix it to carry on again for a little while till it goes again. ~~Its no use talking of opening school if they will not get things fixed up for us.~~

Re: Gordon's Indian Residential School
Your File I.A. 1580-4

In a memorandum dated April 2nd, 1949, we brought to the attention of your Branch the necessity for improving the lighting plant at the above school. In reply we received a memorandum dated April 13th, reading in part as follows:

> "Before we can make any recommendations, it will be necessary to have complete data on the electrical requirements, and to this end we have requested Mr. W.W. Perrie, who left Ottawa for the West on April 11th, to make an inspection and submit a report."

In connection with the above matter we again wrote your Branch on May 23rd, and received a reply dated June 1st.

In a letter dated June 24th, Regional Supervisor Ostrander advised us that Mr. Perrie made an inspection of the electrical system at the above school on June 9th. On receipt of that letter we wrote your office on July 6th.

The reply dated July 15th did not include a definite recommendation, nor have we received the information promised in the second paragraph. Today we are in receipt of a letter from the Principal of the school which reads in part as follows:

It was bad enough without anyone in the building, but now we have people and children in the school it is no joke. I don't know if we can fix it to carry on again for a little while till it goes again."

As you are no doubt aware, extensive and expensive improvements have been made to this building during the past two years, and we must have it in readiness for receiving pupils on September 1st. The school is conducted for us under the auspices of the Church of England, and the accommodation at the Gordon's School is urgently required for the Indian pupils belonging to that denomination.

We would appreciate it if you could arrange to have this matter given immediate attention so that the improvements to the electrical system may be effected immediately.

MEMORANDUM

Re: Gordon's Indian Residential School,
Punnichy, Saskatchewan.

With reference to a letter received from Mr. Perrie dated June 25th in connection with the above, you are advised as follows:-

On his recent visit to this school, it was pointed out to Mr. Perrie, that some toilet seats were in need of replacement. Acting Principal Fred Mayo, requested that he be supplied with twelve new seats.

As this is an ordinary maintenance item, it is felt that the request should have been forwarded direct to the Indian Affairs Branch for their consideration.

We are attaching copy of Mr. Perrie's memorandum in this regard for transmission to Indian Affairs Branch for their attention.

Dear Colonel Neary:

Telephone Line, Gordon's Anglican
Indian School, Punnichy, Sask.

Mr. Mayo, Principal of the above School, reports that he is having trouble continually with the present telephone line to the School which runs through the trees and, with a number of posts broken off and wires down, repairs are needed every time there is a storm or heavy wind.

He has obtained locally the undermentioned tender for changing this line from its present location to a more suitable one:

"12	20' x 5 Red Cedar Poles	@	4.00	48.00
25	Oak side brackets	@	.10	2.50
25	# 9 long Sulators	@	.10	2.50
4	Anchor Rods	@	1.00	4.00
4	Anchor Braces	@	2.50	10.00
25#	#12 Iron Wire	@	.16	4.00
10#	Line Cable	@	.20	2.00
	Labour 87 Hours	@	1.00	87.00
			Total	$160.00

Will you please advise us if you can do anything in this matter during the present summer.

Yours sincerely,

Henry G. Cook,
Superintendent.

MEMORANDUM

OTTAWA, July 29th, 1949.

Re: Water Supply and Drainage -
Gordon's Indian Residential
School, Saskatchewan.

We have received a report from Mr. Perrie in which he states that the work remaining to be done in connection with the water supply consists of a small amount of back-filling and the cleaning up of debris around the project. He states that this work can be done at any time, and there is no real danger to the children of the school while the trench is in its present condition.

We are now in receipt of a further report from Mr. Perrie, in regard to drainage in the vicinity of the Piggery and the Cow Barn as follows:-

"When making an inspection at this school recently Mr. Fred Mayo, Acting Principal, advised me that on the occasion of any heavy rains water ran freely over the floors in the Piggery and Cow Barn. From inspection of the elevations shown on the enclosed plan you will note that the area South of these two buildings slopes rapidly to the North and it is therefore natural that the drainage from this area will flood the floors in these two buildings.

It would be a simple matter to remedy this situation by grading the driveway around the buildings as indicated on the plan, as the ditch on the south side of the driveway would intercept the water and cause same to drain to the West away from the buildings.

The cost of this work would be very little if there was any equipment such as a Blade Grader in the vicinity of the school, but it would cost a good deal to bring in a grader to do this little job. Mr. R.B. McLeod, Saskatoon, who still has some work to do in connection with the water supply at this school, has advised me that he will be able to proceed with this work within the next week or ten days and it is quite likely that the equipment that he will be using to complete his contract will be a small bulldozer. This unit would not be the ideal type of equipment to use for grading the driveway but it would serve the purpose and it is therefore recommended that I be

authorized to arrange to have this work done by Mr. McLeod, when he has his equipment on the job.

The estimated cost of grading the driveway as suggested is not over $150.00."

As the amount stated as the approximate cost is small we suggest that, if Indian Affairs approve of this work that $200.00 be transferred to this Division in order that the work may be done. These small jobs often run over the estimate.

Kindly advise if approval is granted.

	supplier shall provide supervision for the installation of the equipment which shall be fully tested and left in first class operating condition.			
2.	Tenders should clearly state delivery date (a) of engine and generator (b) of panel.			
	We are anxious to open this school on September 5 and want delivery of the engine before that date. Therefore, delivery dates should be clearly shown. The delay in sending this requisition over is due to the fact we had to wait until an engineer could visit this school and determine the above specifications.			
3.	It is recommended that you receive tenders from the following firms: (1) Mumford, Medland, Limited, Winnipeg, Man. (2) Eastern Canada Engines, 4281 Notre Dame St. West, Montreal, 30, Que. (3) Canadian Fairbanks Morse, Ottawa, Ont. (4) Vivian Engines Works Ltd., 205 Transportation Building, Montreal (also Vancouver) (5) Russel-Hipwell Engines, Ltd., 1123 Notre Dame St. West, Montreal, P.Q.			

I hereby certify that I have personal knowledge that all the above articles are required in the Department and for Departmental purposes only. The expenditure required by this requisition is strictly unavoidable and the public interest will suffer if it is not made.

SIGNED—

APPROVED— B. Neary for Director

(1) Group requisitions for equipment, supplies, and material according to commodity, i.e. books, stationery, printing, electrical goods, hardware, machinery, provisions, transportation equipment, etc.
(2) Avoid issuing requisitions for one item, only, except in cases of emergent necessity.
(3) Furnish exact details of product required.

GORDON'S INDIAN RESIDENTIAL SCHOOL,
PUNNICHY, SASKATCHEWAN

Specification for New Lighting Plant.

Provide crated and ready for freight shipment the following equipment, which shall be new and carry the full guarantee of the manufacturer.

One only fully automatic diesel electric lighting plant. The engine shall have a capacity of approximately 35 H.P. at 900 R.P.M. and shall be water cooled using pump and radiator with pusher type fan. It shall be mounted on a common cast iron base WITH and connected to an 18 KW. 115 Volt direct current generator. The unit will be operated in parallel with a 110 Volt bank of storage batteries and shall be so arranged that the generating set will automatically start when the load demand equals 15% of the plant capacity and shall automatically stop when the load drops below this value. The battery will then handle the light load demands, receiving charge during plant operation.

Provide separately mounted control panel containing battery and line ammeters, voltmeter, field rheostat and necessary relays and control apparatus. Provide automatic shutdown devices to stop the plant on low oil pressure, high water temperature and ~~excessive~~ cranking on failure to start.
CONTINUED

The unit shall be shielded to prevent radio interference. Provide 20 feet of exhaust pipe, muffler and all necessary fittings.

Supply detailed instructions covering the operation and maintenance of the equipment. The supplier shall provide supervision for the installation of the equipment which shall be fully tested and left in first class operating condition.

Tenders should state delivery date (a) of engine & generator (b) of panel.

Dear Colonel Neary:

Re: Gordon's Indian Residential School
Your File 654-5 (E.1)

In a letter from Principal Mayo received this morning there are a couple of items connected directly with Indian Affairs.

check Mr. Mayo reports that to date he has not received delivery of the ironing machine of which mention is made in your letter of June 10th.

The Principal also reports that to date the McLeod people have not filled in the ditch left open last winter because snow and frost prevented completion of the work. Mr. Mayo points out that fences have to be replaced and the yards levelled before the incoming of children to School.

It would be appreciated if some action could be taken regarding the above mentioned items as both are vitally important to the reopening of the School.

Yours faithfully,

Henry G. Cook

Re: Gordon's Indian Residential School, Punnichy, Sask.

In reply to your marginal notation of the 27th ultimo appearing on Mr. T.R. MacInnes' memorandum to you dated July 22nd last in connection with the above you are advised as follows:

We have studied Mr. Perrie's report of the electrical installation and are of the opinion, in view of the existing power situation, that a storage battery type of installation is most suited to the needs of the school.

We prepared a specification for a new generating unit and forwarded same by hand to Col. Neary on August 5th to expedite the receipt of tenders. Copy of our specification is attached hereto.

The type of equipment specified is such that the storage battery supplies only a small percentage of the total plant capacity and during heavy load periods the generating set automatically starts and supplies the load demand directly, when the load drops below this predetermined level, at which the engine cuts-in, the unit shuts down automatically and the battery handles the load independent of the generator until such time as the load demand exceeds this set value. The present battery apparently is capable of further use with repairs carried out as suggested by Mr. Perrie, particularly with the type of generating unit specified.

In addition to a new generating unit, Mr. Perrie outlined electrical work necessary in several outbuildings and to the distribution system. It is considered advisable to provide a fuel oil storage tank to replace the present system whereby fuel is provided to the diesel engine in small hand containers.

We have written Mr. Perrie requesting him to obtain prices for providing a storage tank and fittings and for having the necessary electrical work done at the school.

This information should be available in the near future and upon receipt, the Indian Affairs Branch will be further advised.

Chas. H. Buck,

Re: Gordon's Indian Residential School

With reference to your signal of the 26th ultimo regarding the lighting plant at the above mentioned school, we are doing everything possible to expedite delivery.

The quotations have been reviewed by the Lands & Development Services Branch, and a recommendation has been made to the Departmental Purchasing Agent regarding the firm to whom the business should be awarded. We were advised by the Purchasing Agent this afternoon that his recommendation has been placed before the Minister, and as soon as his approval is obtained, the order will be wired to the firm.

They promise three weeks delivery. Probably this means that the machine will reach the school by the end of September.

We have informed Canon Cook of the M.S.C.C. along the same lines as we are advising you, and I am under the impression that Canon Cook has notified the Principal of the Gordon's School that the school should not be re-opened until early in October.

Dear Colonel Neary:

Telephone Line, Gordon's Anglican
Indian School, Punnichy, Sask.

Mr. Mayo, Principal of the above School, reports that he is having trouble continually with the present telephone line to the School which runs through the trees and, with a number of posts broken off and wires down, repairs are needed every time there is a storm or heavy wind.

He has obtained locally the undermentioned tender for changing this line from its present location to a more suitable one:

Dear Canon Cook:

Re: Gordon's Indian Residential School
Telephone Line

With reference to your letter of the 8th instant regarding the above, we have forwarded a copy of your letter of July 26th to Regional Supervisor Ostrander. In this letter the following instructions were given to him:

"If you consider that it is necessary to change the telephone line from its present location, you may have the work done at a cost not exceeding that mentioned in Canon Cook's letter."

We have not yet heard from Mr. Ostrander, but we are writing to him again today.

Sincerely yours,

Phillip Phelan,
Chief, Education Division

Ottawa, Ontario.

Dear Colonel Neary:

Electric Wiring, Gordon's Indian
Residential School,
Punnichy, Sask.

Herewith is a notice from the Electrical Inspection Branch, Department of Labour of Saskatchewan, to your Department requiring that wiring in Horse and Cow Barns and Piggery, now in a hazardous condition, be put in proper shape by a licensed contractor on or before 15th October, 1949.

The enclosed notice, which was received today, was sent to this office obviously in error and it seems quite clear that it is intended for you.

Yours sincerely,

Henry G. Cook.

QUANTITY		UNIT PRICE	TOTAL
1.	Specifications for new Lighting Plant (as prepared by Engineers of Lands and Development Services Branch):		
	Provide crated and ready for freight shipment the following equipment, which shall be new and carry the full guarantee of the manufacturer:		
	One only fully automatic diesel electric lighting plant. The engine shall have a capacity of approximately 35 H.P. at 900 R.P.M. and shall be water cooled using pump and radiator with pusher type fan. It shall be mounted on a common cast iron base with and connected to an 18 KW. 115 Volt direct current generator. The unit will be operated in parallel with a 110 Volt bank of storage batteries and shall be so arranged that the generating set will automatically start when the load demand equals 15% of the plant capacity and shall automatically stop when the load drops below this value. The battery will then handle the light load demands, receiving charge during plant operation.		
	Provide separately mounted control panel containing battery and line ammeters, voltmeter, field rheostat and necessary relays and control apparatus. Provide automatic shut-down devices to stop the plant on low oil pressure, high water temperature and continued cranking on failure to start.		
	The unit shall be shielded to prevent radio interference. Provide 20 feet of exhaust pipe, muffler and all necessary fittings.		
	Supply detailed instructions covering the operation and maintenance of the equipment. The

Attention: Mr. R. A. Campbell
Re: Painting Outbuildings,
Gordon's Indian Residential School

Recently, when making an inspection at the above school, Mr. Fred Mayo, Acting Principal, requested that consideration be given to the painting of the various outbuildings at this school and in accordance with his request the buildings were measured up and the statement, which is attached, shows the areas of the surfaces to be painted if the work is to be done.

The estimated cost of the work, which covers 1 coat on the roofs, 2 coats on the sides and ends of the buildings, window frames and trimming and the varnishing of the doors, is $3,500.00.

The above information is submitted for the information of the Indian Affairs Branch in the event that it is decided to give consideration to Mr. Mayo's request that these buildings be painted. The buildings are badly in need of paint.

S A S K A T C H E W A N

DEPARTMENT OF LABOUR, REGINA.....BOILERS, FACTORIES & ELEVATORS BRANCH

Attention: Owner, Manager or Superintendent

Dear Sir:

The following extracts from the Boiler & Pressure Vessel Act 1948, are particularly drawn to your attention.

Section 14 An inspection certificate may set forth repairs or alterations to be made in, upon or in connection with any boiler, pressure vessel or plant, and the owner shall cause such repairs to be executed forthwith.

Section 17 Every inspection certificate shall be posted in a conspicuous place in the plant or near the boiler or pressure vessel to which it relates and shall be produced by the owner or other person responsible for or in immediate charge of such boiler, pressure vessel or plant upon demand of an inspector.

Section 20 (1) No owner shall cause or permit any high pressure boiler or steam plant to be operated unless :

(a) a chief engineer who holds a certificate entitling him to operate such boiler or steam plant as chief engineer, and who is not responsible for the operation of any other boiler or steam plant, is responsible for and personally supervises the operation thereof; and

(b) either such chief engineer or a shift engineer who holds a certificate entitling him to operate such boiler or steam plant as shift engineer is in immediate charge thereof and the chief engineer, shift engineer or some other person acting under the direct supervision of the chief engineer or shift engineer is in personal attendance on the boiler at all times, whether or not any such boiler is equipped with automatic control.

(2) Subject to subsection (3), no owner shall cause or permit any low pressure boiler or steam plant having a capacity of twenty horse power or more to be operated unless a person who holds a certificate entitling him to operate such boiler or steam plant is responsible for the operation thereof and in personal attendance thereon at all times.

(3) A low pressure boiler having a capacity of not more than seventy-five horse power which is equipped with an automatic low-water cut-out device approved by an inspector and designed to shut off the fuel fire in the event of low water, may be left unattended and in operation for a period not exceeding ten consecutive hours if:

(a) the safety valve is set to relieve at not more than fifteen pounds to the square inch;

(b) the safety valve and automatic low-water cut-out device are tested daily to ensure their efficient operation;

(c) the automatic low-water cut-out device is installed in such manner that it cannot be rendered inoperative by the manipulation of any manual control or regulating apparatus and the water column, water glass and the float chamber of the cut-out device may be thoroughly blown out each day.

Section 27 Every owner of a boiler, pressure vessel or plant shall provide and keep at all times in a readily accessible location an adequately equipped first aid kit for the treatment of minor injuries and shall produce such first aid kit upon demand of an inspector.

Our inspectors report that in some instances owners are employing persons to operate boilers who do not hold certificates issued under the Act and we sincerely hope that after receipt of this notice such violations will be corrected making further action unnecessary.

Your full co-operation in respect to all the requirements of the Act is solicited in the interests of public safety and will be greatly appreciated.

Yours very truly,

Joseph Taylor.

CHIEF INSPECTOR.

Regina, September 17th, 1949.

Indian Affairs Branch, Department of Mines & Resources, OTTAWA.

With reference to Department letter of the 13th instant, File 654-5 (E1), regarding changing the telephone line at the Gordon's Indian Residential School, this is necessary and should be done before winter sets in.

I have instructed Mr. A.R. Nixon, Acting Superintendent, Touchwood Agency, to take the necessary action to construct the new line, as indicated in information supplied the Department by the M.S.C.C.

The contractor who is to take on the work has been held up through difficulty in getting men while harvest is on, but will proceed with the line as soon as harvest is finished, which will probably be within ten days.

Please confirm my action in this connection.

Dear Canon Cook:

Re: Telephone Line - Gordon's
Indian Residential School

With reference to your letter of September 8th and previous correspondence regarding the above, Regional Supervisor Ostrander advises under cover of a letter dated September 17th, that construction has been delayed through difficulty in getting men while the harvest is on.

He further states that arrangements will be made to proceed with the line as soon as harvest is finished, which will probably be about September 27th.

Sincerely yours,

Philip Phelan,

MEMORANDUM

Ottawa, September 17, 1949.

Re: Gordon's Indian Residential School,
Punnichy, Saskatchewan.

In reply to your marginal notation of August 26th last, appearing on Major MacKay's memorandum to you of the 24th ultimo in connection with his request that we review the tenders received and make a recommendation as to which Company should receive the order for a new generating unit for the above, you are advised as follows:-

Tenders were received from the following firms as listed below:-

(a) Canadian Fairbanks Morse Co. Ltd.
Ottawa, Ontario.
F.O.B. Punnichy, Sask. Delivery
approximately 3 weeks.....$5,083.00

(b) Medland Machinery Ltd.
Winnipeg, Manitoba.
F.O.B. Punnichy, Sask. Delivery
4 to 6 months.....$4,554.00

(c) Eastern Canada Engines Ltd.
Montreal, Quebec.
F.O.B. Punnichy, Sask. Delivery
30 days.....$7,645.00
Alternative offer.....$5,125.00

(d) Vivian Engine Works Ltd.
Montreal, Quebec.
F.O.B. Punnichy, Sask. Delivery
56 to 70 days.....$7,311.00

(e) Russel-Hipwell Engines Ltd.
Owen Sound, Ontario.
F.O.B. Owen Sound with freight
prepaid to Punnichy, Sask. Delivery
3 weeks.....$4,430.00

The lowest tender received was that of Russel-Hipwell Engines Ltd, whose quotation was in the amount of $4,430.00 F.O.B. Owen Sound with freight prepaid to Punnichy Saskatchewan. In our opinion, the tender submitted by this firm is the most favourable of the five bids received, and we recommend that the order be awarded to Russel-Hipwell Ltd. Our recommendation was made verbally to the Indian Affairs Branch on September 2nd in an endeavour to expedite delivery of the equipment which is apparently urgently needed.

This firm stated in their tender that very little in the way of installation would be necessary at the site, but that if it thought necessary, a representative of the firm can be made available for this service and they anticipate that a man from Saskatchewan could be sent for this purpose.

R.A. Gibson, Esq.,
Director,
Lands and Development Services Branch,
Department of Mines and Resources,
Ottawa, Ontario.

www.collectionscanada.gc.ca

This arrangement can be made on the basis of $25.00 per man day plus living and travelling expenses. We are of the opinion that the Indian Affairs Branch should arrange for such a representative to be on hand to supervise the installation, test and leave the unit in perfect operating condition.

It is our intention to have Mr. W.W. Perrie make arrangements for placing of the equipment in a suitable location and also to provide for fuel oil storage, reference our memorandum of August 11th. We will contact Russel-Hipwell Engines Ltd. and obtain necessary shop drawings and foundation details of the unit so that Mr. Perrie can proceed with this work. In the event that new foundations are required which might delay the final installation and testing, we would ask that the Indian Affairs Branch contact the above firm as soon as possible, if they concur in having a representative of the firm supervise the installation, and advise us who this representative will be, so that Mr. Perrie can contact him and make final arrangements for the installation.

We are returning by messenger, the tenders received from the Purchasing Agent as requested.

Gentlemen:

Re: Purchase Order 47744

The above order has been placed with you for supplying a lighting plant to be shipped to Gordon's Indian Residential School, Punnichy, Saskatchewan.

In your tender you state that very little is necessary in the way of installation, but if we consider it necessary you could arrange to have a representative of your firm visit the school at the time the machine is being installed. I understand that the man appointed would be from Saskatchewan, and that charge for his services would be on the basis of $25.00 per man day plus living and travelling expenses.

We are not certain yet if it will be necessary to avail of this offer, but we would like to know the name and address of the man whom you would send in the event of our requiring him, so that we can notify our representative in Saskatchewan to get in touch with your representative if the latter's services are still necessary. An early reply would be appreciated.

Sincerely yours,

Phelan

Indian Affairs Branch, Department Of Mines and Resources, Ottawa.

I wish to advise that Voucher #924 in favour of Touchwood Indian Agency Trust Account, in the amount of $60.00 for wages due to men for labour on the Walk-in Refrigerator at the Gordon Indian Residential School, was mailed from this office yesterday.

On checking same, it has been found that the number of hours shown on the Return of Labour was incorrect, as each man worked for 50 hours at .60¢ per hour, instead of 30 hours.

The total amount of the voucher is correct. A corrected Return of Labour is enclosed herewith, and I would be glad if you would attach this to my voucher #924.

Attention: Mr. R. A. Kiff

Gentlemen:

Re: Purchase Order No. 47744.

We note from your letter of the 20th instant that due to the devaluation of the Canadian dollar, it will be necessary for you to increase your price on the above order from $4430.00 to $4555.00 (plus tax). It is understood that you had to purchase some of the generating equipment from American suppliers.

This will be your authority to supply the equipment at the above increased price.

It would be greatly appreciated if you would ship this equipment before the end of the current month.

Yours very truly,

W. M. Vincent

Attention: Mr. Philip Phelan
Chief, Education Div.
Reference: Your file 654-5 (EL)
Our file DMR 4-96-1

Gentlemen:

This will acknowledge receipt of your letter of September 22nd, under the above file number and with reference to the lightihg plant to be shipped to Gordon's Indian Residential School at Punichi, Saskatchewan under your purchase order No. 47744.

We are making arrangements with our representative in Saskatchewan to be in readiness in case you should require his services when this unit is installed. Unfortunately, I cannot give you his address at the present time, but I will be able to send this along to you shortly.

With regard to the actual installation of the unit, I can perhaps outline roughly to you what is involved. You have already received an installation drawing of the unit, our drawing number CD-2911. The usual practice is to install these units on a block of concrete, and for this particular unit we would recommend a block approximately two feet deep, five feet long, and three feet wide. This block should be made of reinforced concrete, and at least 18" of the block should be below the normal ground level. In some instances, these units have been installed on heavy timbers which are firmly embedded in the ground, but this practice is not to be recommended if a concrete block can be used. The generating set is complete in itself insofar as the engine and generator are concerned, and it is only necessary to connect the engine starting batteries and the fuel oil supply line in order to start the unit.

A fuel supply system will be required, and in this case the usual practice is

Indian Affairs. (RG 10, Volume 6310, file 654-5, part 6)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

Library and Archives Canada / Bibliothèque et Archives Canada
www.collectionscanada.gc.ca

to have an underground storage tank for the main fuel supply and a day tank installed in the engine room. A pipe line is connected between the day tank and main storage tank, and a transfer pump, usually hand operated, is installed in this line. The day tank should have sufficient capacity for about at least two days continuous operation, and the engine attendant should pump this day tank full every morning. This day tank is connected to the fuel inlet on the engine. Depending upon the length of oil lines, they can be made of either copper tubing or 3/8" black iron pipe. If necessary, a plumber, with ordinary plumber's tools, can install the fuel tanks and fuel lines. The day tank should be installed above the level of the fuel inlet into the engine so that there is always a gravity feed of fuel to the engine.

A plumber could also install the exhaust silencer and exhaust piping. The main thing to watch here is to avoid any possible bends in the exhaust line, and to keep it as straight as possible.

With regard to the actual location of the engine installation, it should be located in a well ventilated room with sufficient clearance all around the unit to permit access to it for servicing and repairs. A clear area in front of the radiator should be allowed to permit free circulation of the cooling air through the radiator.

The generator control panel is being supplied for wall mounting. It will be complete, including all meters, internal wiring, and generator field rheostat, and will also include the automatic remote starting panel, and the reverse current relay. It will be necessary to supply the main leads between the generator and the panel, and the panel and batteries, together with the smaller leads from the automatic engine control panel to the actuating relay and the engine. Wiring diagrams will be furnished, showing all these connections, and I believe that provincial regulations usually require that this type of work be done by a licensed electrician. There is nothing particularly complicated about it, and a competent electrician could take care of it quite readily.

I trust that the above outline will give you some idea as to what to expect, and if there is any particular detail on which you would like further information, please let me know.

Yours very truly,

RUSSEL-HIPWELL ENGINES LIMITED,

REQUISITION FOR SUPPLIES

May 26 19 49

This space for use of Head Office only

Requisition No. 94233

Order No.

...artmental Purchasing Agent, Ottawa,

...e furnish the following Supplies for use of Gordon's Indian Residential School #654

Vote ..... Primary ..... Object ..... Date Required .....

Ship to Mr. F.A. Mayo, Principal, Gordon's Indian Residantial School, Punnichy, Saskatchewan.

Mail Invoices to Mr. J.P.B. Ostrander, Regional Supervisor of Indian Agencies, 304 Post Office Building, Regina, Saskatchewan.

Purpose for which required Gordon's Residential School

Quantity		Unit Price	TOTAL
1	48" 6 rolled flat ironer, complete with motor or equal.		528.00
	Prices quoted by Laundry Machine Co. Winnipeg, Man.		
	NOTE: This school is conducted under the auspices of the M.S.C.C. and the equipment mentioned was never supplied to it. However, the school has been extensively renovated and will begin to receive pupils on September 1st, and we feel that an ironer should be supplied.		
	P.O. 48879 5/10		

Department of Mines & Resources OTTAWA MAY 30 1949 Purchasing Agent's Office

I hereby certify that I have personal knowledge that all the above articles are required in the Department and for Departmental purposes only. The expenditure required by this requisition is strictly unavoidable and the public interest will suffer if it is not made.

SIGNED— A Nelson

APPROVED— B J Donnelly Director

(1) Group requisitions for equipment, supplies, and material according to commodity, i.e. books, stationery, printing, electrical goods, hardware, machinery, provisions, transportation equipment, etc.
(2) Avoid issuing requisitions for one item only, except in cases of emergent necessity.
(3) Furnish exact details of product required.

RECORDS
INDIAN
AFFAIRS

3024

Regina, October 7th, 1949.

Indian Affairs Branch, Department of Mines & Resources, OTTAWA.

With further reference to Department letter of the 17th ultimo, File 654-5 (E 1) regarding Estimates for the fiscal year 1950-51 in connection with the Gordon's Indian Residential School.

Regarding items (e), (g), and (h), the following are the comments of Mr. A.R. Nixon, Acting Superintendent, Touchwood Agency, in connection with these three items:

"(e) The Principal's residence was vacant all winter two years ago which resulted in considerable damage to the plaster. When Luthi's were doing some work there this fall, they estimated approximately a thousand dollars to repair and re-decorate the walls.

(g) The children's playground was damaged considerably last fall because the pipe-line that brought water from the spring to the school was laid right across this playground. A trench nine feet deep was dug to bury this pipe and when filled in left the ground very rough and will need considerable levelling. Five hundred dollars was included in Mr. Mayo's Estimates for this work and item (h) gravelling driveway and front drive. This may be more than needed as there is already some gravel on the driveway, but more will be needed."

Department of Mines & Resources Indian Affairs Branch OCT 11 1949 REGISTERED P.M.

I would recommend approval of items (e) and (g) as they are necessary. Regarding item (h), in my opinion very little is needed to improve the driveway to the school. As stated by Mr. Nixon there is already some gravel on this driveway, but it would be improved somewhat by adding a small additional amount of gravel. I do not see why the school should not be expected to take care of this from school funds.

Indian Residential School,
Punnichy, Saskatchewan

Further to our memorandum of September 17th last, you are advised that we have forwarded to Mr. W. W. Perrie two (2) prints of the installation drawing for the above supplied by Russel-Hipwell Engines Ltd.

This will enable Mr. Perrie to lay out the equipment to the best advantage in the available space at the school and locate the oil storage tank in an appropriate position relative to the unit.

CUMMINS *Dependable* DIESELS

Owen Sound, Ontario
CANADA

E/M

October 18th, 1949

Mr. Philip Phelan,
Chief Educational Division,
Department of Mines & Resources,
Indian Affairs Branch,
Ottawa, Ontario

Reference: Your Purchase order 47744
Our file DMR 4-96-1

Dear Sir:

In connection with the above order for one Sheppard diesel Model 6D driving an 18 KW generating set for the Indian Residential School at Punnichy, Saskatchewan. We would advise that we expect to be able to make shipment of this generating set on Thursday, October 20th. This unit will go forward via Canadian National Freight prepaid.

In connection with having a serviceman available to check the installation and initially start this unit, we would advise that we would be able to supply a man from our Port Arthur branch to inspect and start this unit. As outlined previously, the charge for his services would be $25.00 per day plus living and travelling expenses. If his services are required we would ask that you please let us know some days in advance of the time that you require him to be in Punnichy. This will enable us to arrange to have a man available, and to allow sufficient time for him to travel to Punnichy. We would suggest that if you require this man, you advise us in Owen Sound and we will in turn get in touch with our Port Arthur branch and see that a man is sent.

We trust that this will be satisfactory, but if there are any further details or information which we could supply please feel free to call on us. In connection with the installation of this unit, if it is possible, it might save you somewhat in the actual service charge if this unit is completely installed with all fuel lines etc. hooked up, ready to start, so that it will only be necessary for the serviceman to inspect the installation and start the engine.

Yours very truly,

RUSSEL-HIPWELL ENGINES LIMITED,

R. A. Kiff

Your File 2219-8-8-121

I desire to refer you to official letter of September 14th and your reply of September 17th with reference to the notice received from the Electrical Inspection Branch, Department of Labour of Saskatchewan, with regard to wiring of the barn and piggery at the above school.

In your letter of September 17th you stated that you had written to Mr. Nixon requesting him to obtain a quotation on the cost of rewiring these buildings, but we do not appear to have received any further information from you.

The M.S.C.C. has now forwarded to us the attached letter which they have received dated October 28th. Please let us hear from you immediately.

Dear Canon Cook:

Re: Gordon's Indian Residential School

We have your letter of the 27th ultimo with reference to the notice from the Electrical Inspection Branch, Department of Labour of Saskatchewan, concerning defective wiring at the above named school.

We wrote to Regional Supervisor Ostrander on September 14th and he replied on September 17th, stating that he was communicating with Superintendent Nixon with a view to obtaining a quotation on the cost of rewiring the barn and piggery at this school.

We have not received any further report from him, and we are writing to him again today requesting him to forward the quotation immediately.

Sincerely yours,

INDIAN
AFFAIRS

Indian Affairs Branch,
Department of Mines & Resources,
OTTAWA, Ontario.

With reference to Department letter 654-5 (E.1) of November 1st regarding necessary improvements in the electrical wiring of outbuildings at Gordon Indian Residential School.

I am enclosing herewith a copy of Mr. Nixon's letter together with a tender received from Mr. S. Brown, a licensed electrician at Punnichy. Mr. Brown's tender is in the amount of $363.00 to supply all materials and labour to make the wiring to conform to the Saskatchewan Electrical Code.

$70.50 will be all materials necessary,as much of the old materials can be salvaged and made use of in the re-wiring.

I would recommend that Mr. Brown's tender be accepted as he is the only local man licensed by the Saskatchewan Power Commission to do this work, and to take in an outside electrical contractor, the additional expense involved would make the job more costly.

J.P.B. Ostrander, Esq., Regional Supervisor of Indian Agencies,
P.O. Building, Regina, Sask.

I regret that the attached tender has not been submitted earlier as requested in your letter of September 17th, 1949, File No. 2220-8-3-121, but Mr. Brown was contacted at the time and asked to submit a tender, but he was very busy at the time and overlooked it until he was again reminded the other day.

Please find his tender for the labour and [illegible] for supplies attached, which I recommend be given immediate attention to have this work done before the winter gets cold.

Gordon's School, Punnichy, Sask.

The following extract from a letter, dated 10th November, 1949, received from the Principal of the above School is passed for your information and for favour of any action you can take to expedite the installation of the equipment in question:

"Our Lighting Engine arrived but it was damaged on the Railway and I had the engineer up from Regina and they have wired the firm for repairs as near as we can tell and now we have to wait for those to come along who knows how long it will take."

Re: Gordon's Residential School

The attached accounts have been forwarded to us for payment.

We are advised that they cover the cost of the expenditure incurred in connection with the water and power alterations made at the above school over the past two years.

Please discuss this matter with the Principal and if you consider they are a fair charge against the appropriation for Indian Education you can forward a voucher. At the same time you should ascertain from the Principal why he has not previously requested authority for the expenditure.

Philip Phelan,
Chief, Education Division.

Gentlemen:

Re: Purchase Order No. 47744

One of the crates containing equipment for the electric lighting plant for Gordon's Indian Residential School, Punnichy, Saskatchewan, was broken in transit, and the following Diesel engine parts were damaged:-

Radiator, Complete
Radiator Frame
Fan and Fan Assembly
Shaft for Water Pump

As the school had to be closed down due to lack of power, we would ask you to ship immediately replacements for the above mentioned parts. Please prepay shipping charges to destination and submit your invoice together with receipted voucher to the undersigned.

Memorandum

Re: Installation of Electrical Plant,
Gordon's Indian Residential School,
Punnichy, Sask.

In previous correspondence regarding the above, you were furnished with comment indicating that by replacing seven (7) wet batteries, the existing bank of batteries would be satisfactory for use with the new D.C. plant, recently purchased for installation at the school.

In a recent report from Mr. Perrie, after visiting the school with Mr. Kosnar from this office, who was instructed to call there on his western inspection trip, the suggestion is advanced that consideration should be given to replacing the complete battery set consisting of 56 - 315 amp. glass cell batteries at a cost of $21.65 each.

Mr. Perrie has not commented on the condition of the existing batteries since his first examination in June last, when in his report he said:-

"All batteries have a small amount of sediment in the bottom of each jar; the terminal posts are in bad shape and should be fitted with new nuts, and the spacers are badly warped in about half the jars."

See report above

In view of such comment, indicating a shortening life for the cells still intact, requiring progressive replacement, it is recommended that Indian Affairs authorize the purchase at once of 56 - 315 ampere glass cell batteries (Autolite or equal) to be forwarded to the school for installation as soon as possible, and that Mr. Perrie be authorized to arrange for the necessary labour, all costs to be met by the Indian Affairs Branch, Educational Vote.

The total expenditure involved would be in the neighbourhood of $1,300.00.

Victor F. Wheeler
Chief, Engineering and
Construction Division.

RECORDS
INDIAN
AFFAIRS

Colonel B. F. Neary,
Supt. of Indian Education,
Indian Affairs Branch,
Dept. of Mines & Resources,
Ottawa, Ontario.

Dear Colonel Neary:

Hereunder is an extract from a letter, dated 28th November, 1949, just received from Mr. Mayo, Principal of Gordon's School. I realize that you have the matter of supply of replacement parts in hand but cannot something be done to put some pressure on the firm in Owen Sound to expedite their shipment as the lack of water and light at this time of year makes conditions intolerable.

" We had another break down with the lighting engine last week and was without water and light for three days. I had to make another trip to Winnipeg for parts. Had to work all day Sunday well into the night but have managed to get it going again. I shall send in this account to the Agent.

We have no further action on the new lighting plant yet. I have written Mr. Ostrander also Mr. Perrie they say they are just waiting to hear from the firm for the repairs, and cannot do more."

Department of Mines & Resources,
c/o - Mr. A. H. Nixon, Superintendent,
Gordon's Indian Residential School,
Punnichy, Saskatchewan.

Reference: Our File - DMR 4-96-1

Gentlemen,-

Further to my letter of October 28th, we have been advised by the relay manufacturers that the use of the 600-ohm resistor as shown on our original wiring diagram #CD-2969 is not entirely satisfactory, and that a 500-ohm resistor with a 200-ohm tap should be used.

We have therefore revised our wiring diagram and three corrected copies of this diagram are included with this letter.

We are sending under separate cover by parcel post, the correct resistor to be installed in conjunction with the two relays. We trust that this change will not have caused you any inconvenience.

Yours very truly,

RUSSEL-HIPWELL ENGINES LIMITED.

Dear Canon Cook:

We are in receipt of your letter of November 30th with reference to the replacement parts required for the electric lighting plant at Gordon's Indian Residential School.

We were advised yesterday that these parts had been shipped on November 24th by C.N. freight, and we so advised Regional Supervisor Ostrander. We feel certain that he will direct the setting up of the plant as soon as these parts arrive.

Yours sincerely,

Philip Phelan,

Re Gordon's Residential School

With reference to your letter No. 654-5 (E1) of November 21, 1949, regarding the enclosed account on Voucher No. 1197, I wish to inform as follows:

This account was sent to Canon Cook with a letter from Mr. Mayo. It covers expenditures of small repair jobs--phone, electricity and water system. Some of this repairing was done as far back as 1948.

AFFAIRS

R.A. Gibson, Esq., Director.

Re: Water Supply - Gordon's
Indian Residential School,
Saskatchewan.

The following has been received from Mr. Perrie under date of December 6th, and is forwarded for the information of Indian Affairs:-

Department of Mines & Resources
Indian Affairs Branch
DEC 10
A.M.
REGISTRY

"I have to acknowledge receipt of your letter of November 25th with attached letter from W.J. Westaway Company Limited relative to the water supply at the above school, and I have to advise that I am quite in accord with your suggestion that it might be wise to withhold action on the proposal to soften water at the school until after the school is in operation with a full complement of pupils and staff and a steady water consumption is being maintained.

It is true that, although the analysis covering the various samples of water taken at this school during the past two years show quite a variation in the nature of the water, all seem to indicate that it requires some treatment to make it entirely satisfactory for use in the school heating plant and for laundry purposes, and were it not for the high sulphate value of the water it would seem that the ordinary type of water softener would be all that is required at the school. To remove the sulphates would, as indicated in a letter from W.J. Westaway Company Limited, be too expensive an operation for this particular application and it is a question whether ordinary softening would take care of the problem.

The water level in the well has, since the well was cleaned out, never risen to anything like the level of last spring, and possibly, as you suggest in your letter, the spring thaws and rain, which will no doubt again raise the level of the water in the well, will have an effect on the quality of the water and an analysis next spring may indicate somewhat different properties than would those taken previously. Some immediate steps should, however, be taken to have a hypochlorinator installed and the water treated at the present time".

Library and Archives Canada / Bibliothèque et Archives Canada
www.collectionscanada.gc.ca

With reference to the purchase of a hypochlorinator we have received quotations and are now considering which particular type we shall recommend for purchase.

We are taking the necessary steps to close out the contract for this water supply and as soon as we know definitely the additional money needed to make the final payment to the contractor and purchase the hypochlorinator we shall advise you so that a transfer of funds can be arranged.

We are in receipt of your letter of the 10th instant with reference to the water softener which was ordered for the Onion Lake R.C. Indian Residential School.

We note the action you have taken and if the water softener is suitable for the purpose required at the Gordon's Residential School, we approve this transfer.

In connection with the water supply at the Gordon's Residential School, I enclose for your information a copy of a memorandum recently received from the Lands & Development Services Branch.

I also enclose an account received from Russel-Hipwell Engines, Limited, with reference to the additional equipment that had to be purchased for the Gordon's Residential School, in view of the damage caused to the lighting plant while in transit to the school.

Memorandum:

DIRECTOR, LANDS & DEVELOPMENT SERVICES

Re: Water Supply, Gordon's Indian
Residential School.
Your File I.A. 1580-4

We are in receipt of your memorandum of December 9th with regard to the above.

With reference to the second last paragraph of your letter, we have a water softener surplus to requirements in Saskatchewan, and within the last week Regional Supervisor Ostrander has consulted with Mr. Perrie with a view to ascertaining if the surplus water softener would be suitable for use at the Gordon's School.

No doubt Mr. Perrie will be writing to you again, and in the meantime, we suggest that no water softener be purchased for the Gordon's School until it is ascertained if the softener mentioned in this memorandum would meet the requirements.

Memorandum:

DIRECTOR, LANDS & DEVELOPMENT SERVICES

Re: Water Supply - Gordon's Indian Residential School.
Your File I.A. 1580-4

With reference to my memorandum of December 14th, I am now advised by Regional Supervisor Ostrander that the water softener surplus to requirements in Saskatchewan has been found satisfactory to use in the above school.

Mr. Ostrander states that Mr. Perrie agreed that the water softener would be suitable and it is being transferred to the Gordon's School immediately.

December 16th, 1949.

Indian Affairs Branch, Department Mines & Resources, Ottawa, Ont.

With reference to enclosed voucher #1304-5-6 for material and labor repairs to the old lighting plant at the Gordon Indian Residential school, I would advise that it was necessary to have some repairs made in order to keep the old plant working and Larson & Richmond of Punnicky were called in to do the work.

Two weeks after this work was done the clamp shaft gear broke and it was necessary to order repair parts from Medland Machinery Limited, Winnipeg, Man, and to engage Mr. Bert Dunston and helper, to install these.

While no authority was received to have this work done, it was an emergency and the only way to keep the school in lights, and I would recommend that these accounts be paid.

Re: Water Supply - Gordon's
Indian Residential School, Sask.

With further reference to our memorandum of December 9th on the above subject, we are now taking the necessary steps to purchase a hypochlorinator and make the final payment to the contractor.

Additional grading work was carried out this summer along the pipeline to provide material to complete the fills and the backfilling of the trenches which had subsided during the winter. Some work was done on the engine room pump, painting the Intake Structure and pumping out the reservoir and Intake Well.

The funds required to be transferred to this Division to complete payment to the contractor and purchase a hypochlorinator amount to a total of $2,175.00.

When this transfer is received we will arrange to close out the contract.

Regina, December 17th, 1949.

Indian Affairs Branch, Department of Mines & Resources, OTTAWA.

I am in receipt of Department letter of the 14th instant, File 654-5/659-5 (E1), regarding equipment at the Gordon's Indian Residential School and the water softener which is being shipped from the Onion Lake R.C. Residential School to the Gordon's School.

The Department will have received an Army Message from me to the effect that the water softener, having been found satisfactory, is being shipped from the Onion Lake R.C. Residential School to the Gordon's School.

Regarding the quality of the water at the Gordon's Residential School, this matter has been discussed with Mr. W.W. Perrie, of the Lands and Development Services Branch, and he informs me that the sulphate in the water cannot be removed by any water softener; that the water softener formerly shipped to the Onion Lake School will soften the water sufficiently for washing purposes; that the sulphate will remain to cause a scum on the water and will show on basins, bath tubs, and laundry equipment, but will do no harm.

The account received from Russel-Hipwell Engines, Limited is being sent to Mr. Nixon to submit to the Department in the form of a voucher. One copy of this was forwarded to the Canadian National Railways, Claims Department, as it was one of the documents necessary to establish our claim.

MEMORANDUM TO THE DIRECTOR, LANDS and

DEVELOPMENT SERVICES BRANCH.

Gordon's Indian Residential School.

We have received a letter from the Missionary Society of the Church of England in Canada, concerning the type of water to be used in the boiler at this school. Their letter reads as follows:

> "Recently I visited the Gordon's Indian Residential School and Mr. Mayo told me that both Mr. Hargreaves and Mr. Perry instructed him to use soft water only in the school boilers. The local boiler inspector has told him to use only hard water in the boilers and Mr. Mayo is now uncertain as to which authority's instructions to follow.
>
> "From my own observations of what the hard water at present used at the school is doing to bath-room and wash-room fixtures I'm inclined to the opinion that the hard water would soon corrode and scale in the boilers. However I'm no expert and would appreciate your opinion.
>
> "For Mr. Mayo's protection I would appreciate you giving him your instructions, in writing, as to what type of water to use in case the local boiler inspector objects to Mr. Mayo's ignoring his instructions. As the boilers were installed at federal cost I imagine your instructions would supersede the local inspector's."

We would appreciate your comments on this situation.

Department of Mines & Resources,
Mr. W. M. Vincent,
Departmental Purchasing Agent,
Ottawa, Ontario.

Dear Sir:

When checking our records we have examined our Sales Invoice No. 8402 dated October 21, 1949. This invoice covers the purchase by your Department of a diesel generator set, which was shipped to a school in Saskatchewan.

We also notice that the price charged by us includes both duty and Sales Tax.

From our experience in such matters, we believe that this unit (which has been ruled of a class or kind not made in Canada under Customs file 4043-3 dated February 13, 1940) can be correctly entered free of Customs duties under Tariff item 696. This tariff classification if allowed, would also exempt the unit from Sales Tax.

There may be some ruling with which we are not familiar which may suspend these exemptions between Government Departments, but in view of the very substantial saving possible, and which would be passed on to your Department, we suggest you take this matter up with the Customs Department.

If they rule that Tariff item 696 is applicable, please send us a copy of the ruling, and we will issue a credit note to refund the duty and sales tax immediately.

Yours very truly,

RUSSEL-HIPWELL ENGINES LIMITED,

Superintendent,
Indian School Administration, M.S.C.C.,
102 Bank Street,
O t t a w a, Ontario.

CORDON'S RESIDENTIAL SCHOOL - WATER SOFTENER.

As I previously informed you, Mr. Ostrander has arranged for a water softener, surplus at another residential school, to be shipped to the Gordon's School. In reporting on this shipment, Mr. Ostrander makes the following statement:

> "Regarding the quality of the water at the Gordon's Residential School, this matter has been discussed with Mr. W. W. Perrie, of the Lands and Development Services Branch, and he informs me that the sulphate in the water cannot be removed by any water softener; that the water softener formerly shipped to the Onion Lake School will soften the water sufficiently for washing purposes; that the sulphate will remain to cause a scum on the water and will show on basins, bath tubs, and laundry equipment, but will do no harm."

You might advise the Principal at the School so that there will be no alarm on the part of the staff with regard to this sulphate skum.

The hypochlorinator is being purchased by the Lands and Development Services Branch. The new batteries have been ordered at an approximate cost of $800.00.

Bernard F. Neary,
Superintendent of Education.

Regina, December 27th, 1949.

A.R. Nixon, Esq., Indian Superintendent, PUNNICHY, Saskatchewan.

Canon Cook, Superintendent of the M.S.C.C., who visited the Gordon's School recently, reported to the Department that the old laundry equipment (washer, extractor, dryer) replaced by similar equipment sent from the Elkhorn School was discarded and is lying behind the barns at the Gordon's School.

Canon Cook asked that this old equipment be turned over to him for sale as junk. I presume you know this cannot be done. However, the question now arises whether or not it has some value. I would ask that you examine it on your next visit to the school, and communicate with two or three junk dealers, describing the discarded equipment to them, and asking if they will make an offer on it.

In the meantime ask Mr. Mayo to see that it does not disappear.

Dear Sir;

Re.Gordons Indian School,Punnichy. Report No.15.

I regret to state that since my last report very little progress has been made on this job. The linoleum is not yet here,and the water supply system has not been completed. The ash hoist has not yet arrived on the job.
I have called Shoquists several times on the phone and have received assurances that this stuff is on the way etc.etc., but nothing has arrived yet.I am about ready to give them so many days to have this material on the job or consider that we will have it supplied through other sources.
I must admit that from a financial point of view I have never had to deal with a more unsatisfactory firm of contractors. I have repeated letters,wires,and phone calls from various supply houses asking that I protect them,and see that they get their money. I have notified Shoquists that before any further money is certified in their favour they must supply me with a clearance from all sub-contractors and supply houses connected with this job.

Generally the work is in much the same condition as at my last report;except that the painters have gone ahead and are now waiting to make the final touches.
The slate blackboards have not arrived.

We had some two hundred panes of glass broken during a severe hail storm a week ago;see enclosed photographs.

Your obedient servant,

W. Swan
Inspector of Construction.

Dear Sirs;

Re.Gordon School.

Although I have called your attention,during the past few weeks,to the dilatory manner in which you are finishing up work at the above job,there seems to be no improvement. Except for the laying of the linoleum which has been going on for the past week,practically nothing has been done for over a month.At the present moment there is no ash hoist on the job;this could easily have been in place two months ago.There is no sign of the slate blackboards. There is no jacket heater in the boiler room;and no effort appears to be going on to get the pump and motor on the job for the water supply.The pulleys for the laundry machinery are not on,and the water tanks and filtration plant have not been left in a clean condition.Pulls and push plates have not been put on the kalamein iron doors to stair wells,and thresholds to doors are not down.The plasterer has left the arch in front hall in such shape that the wood columns cannot be put up square.This is all apart from the dozen and one little things such as white washing the boiler room, fixing broken plaster,touching up painting etc.etc. that are to be done.The electrician has not yet finished.

The Department expected that this school would be ready to open the first of this month,and cannot understand the delay. I must point out to you now that if this work is not done within the next week it will be necessary to have it done by others and charged to your final payment.

I would like to point out at this time that I must have a clearance from your sub-contractors and supply people before a final certificate can be issued to you,also a statement from the Workmen's Compensat on Board that you are clear with them on this job.I do not hesitate to say that your methods of financing on this job have been far from satisfactory.

Yours faithfully,

W. Swan

Dear Sir;

Re.Gordons Indian School,Punnichy. Report No.16.

I am sorry that this report can be nothing much more than a similar one to that of Aug.2nd.

The Linoleum will be finished by Monday,and the job is being well done by a man from the Hudsons Bay Co.who supplied the linoleum;but as far as the other work is concerned the contractors are acting in a very dilatory manner and I have written them to the effect that if this work is not done within the next week I shall take steps to have it done at their expense.I enclose herewith a copy of my letter to them.

A weeks work should do all the fixing and cleaning up that is necessary to put the school in shape to hand over.

Your obedient servant,

W. Swan

Dear Mr. Scott:-

I beg to advise that the following outbuildings and repairs are required at the Gordon's Indian Residential School immediately:-

Combination granary and workshop		$875.00
Converting a building into a garage and moving it from its present site.....		320.00
Moving a temporary building adjacent to the school, to be fitted up as a storehouse...		200.00
Repairing floors, etc. in barns,	Approx.	150.00

$670

I personally visited the school, and the prices obtained are low, and the work is absolutely necessary and should be proceeded with at once. I have carpenters from Regina building a henhouse and implement shed at the school, and I would like to have authority to finish these outbuildings. The whole thing is not very costly and I do not think we can get along without them for any length of time.

Kindly advise me by wire if I may proceed with this work.

Yours very truly,

W. M. Graham,
Indian Commissioner.

R

Dear Sir;

Re. Gordons Indian Residential School. Report No. 17.

This job is now ready to hand over, but for the water pump and motor, and the ash hoist. There seems to have been some mistake on the latter in taking measurements and I am informed that it may be two weeks yet before installation is completed. The pump has been giving some trouble and in view of the fact that they took a dead mouse and one or two other things from the supply pipe I gave orders to clean out the supply well at the lake edge. The lake is very low this year and the filtration of water to the well is not very rapid. We may find it necessary to dig down and carry the original rough gravel filter out further to the water.

The machinery is now in running order, and the final cleanigg up by plasterer and painter has been done, but I am not taking over on behalf of the Department until the ash hoist and pump are properly installed, although the Rev. Mr. Stanford has arranged with the contractors to use one of the classromms.

O t t a w a,
Sept. 6, 1930.

R

Dear Sir,-

Re: Wage Claims - Indian School,
Punnichy, Sask.

I spoke to you to-day by telephone regarding a telegram that we have received from our Western Fair Wages Officer relative to complaints that carpenters employed on the Indian School in Punnichy, Sask., have not received the rate of wages to which they are entitled under the terms of contract. Our officer has not had an opportunity of investigating these claims as yet but suggests that in the meantime payment should be withheld of the final estimate to the Contractors until such time as the matter can be looked into. This Department would recommend accordingly.

Yours truly,

Gerald H. Brown,
Assistant Deputy Minister of Labour.

SCHOOLS BRANCH
SEP 9 1930

Immediate

Sir:-

I wish to bring to your attention the fact that a root cellar is absolutely necessary at the Gordon's Indian Residential School.

As you are aware, some outbuildings are being erected there now, and while the carpenters are on the ground it would be well to have the root cellar built, as the school have no place to store their potatoes and other vegetables for the winter.

In building a root cellar with cement walls and roof it is necessary to reinforce it with iron and steel, and this would be expensive, as the labour alone would cost between $400.00 and $500.00, and as the Department has advised me that only expenditures that are absolutely necessary may be incurred, I would suggest that an ordinary root house be constructed, which would meet the requirements. This would be dug into a hill and lined with boards, and would have a pole roof covered with brush, straw and earth, and of course the necessary ventilators, etc. I find that I can build a place of this nature for from $225.00 to $250.00, and no doubt it would last at least four or five years.

I should be glad to have the Department's authority immediately to go on with this work, as it is absolutely essential, and I do not suppose the Church authorities have any money to build it themselves.

The Secretary,
Dept. of Indian Affairs,
Ottawa.

Your obedient servant,

J.D.McLean Esq.,

Assistant Deputy & Secretary,

Dept.of Indian Affairs,

Ottawa.

Dear Sir;

Re.Gordons Indian School. Report No.18.

As intimated in my last report we have run into some trouble on the water supply to the school.After cleaning out the well at the lake shore it was found that the water did not rise very quickly,and would not rise to the level of the lake surface.Upon investigation we found that the water level of the lake was down some four feet from its level of a yeare or so ago,and down below where the water could get into the gravel and stone around the well.It was necessary to immediately dig a trench to continue the original trench from the well to the lake.This I ordered done,and have had it filled with boulders and gravel,and have also had the forty foot culvert cleaned out and replaced in this trench out into the lake. In order that you may have a better idea of this I enclose three photographs showing the work in progress.
Now that the water is again running to well there will be about eight feet of water in same. The last two years have been very dry up here and all bodies of water are at a very low point.
I have had the foreman keep careful time of the this work, and have checked up carefully myself.

The school is now completed except for the ash-hoist,and the electric motor for the water pump,this latter being run temporarily by a gas engine. As soon as these two items arrive a day will suffice for the installation of them. The contractors are now cleaning up around the building and tearing down the office and buildings.

The Sewing Room and one Class Room are in use,but the rest of the building is not being used.

Your obedient servant,

W. Swan

Dear Sir,-

Re: Wage Claims - Indian School,
Punnichy, Sask.

With respect to the above-mentioned wage claims, concerning which the Department of Labour requested on Sept. 6th that payment of progress estimates to the contractor should be withheld pending the determination of these matters, I have to inform you that we have received word of the settlement of the claims in question. There is no reason, therefore, for further withholding payment of the progress estimates on this work.

Yours truly,

Gerald H. Brown,
Assistant Deputy Minister of Labour.

J.D.McLean Esq.,

Assistant Deputy & Secretary,

Department of Indian Affairs,

Ottawa.

Dear Sir;

Re.Gordon's Indian Residential School,Punnichy. Report 20.

On Wednesday I took over the school from the contractors although the ash-hoist is yet to be put in.This it is expected,will be on the job in a week or ten days.While testing out the fixtures and drains we found that the septic tank was not functioning,so I had it cleaned and put in good condition.We now have everything in running order and the contractors away.The Rev.Principal is using the school as much as he possible can without furnishings,and he has a man putting steam on and generally looking after the machinery.

I have gone over the numerous items of extras and deductions and under separate cover I am sending final certificate, with the request that the sum of $300.00 be with-held until the ash hoist is on the job.
With the final certificate I am sending the guarantee from the contractor,and a signed clearance from all sub-contractors and supply people who were connected with the job. I have done this because of the large amount of trouble I have had over the financing of the work by Shoquist Bros.

Your obedient servant,

W. Swan

Inspector of Construction.

William Swan, M. R. A. I. C.
ARCHITECT

PUNNICHY, SASKATCHEWAN

Sept. 30th 1930.

The Deputy Minister,
Department of Indian Affairs,
Ottawa.

DEPT. OF INDIAN AFFAIRS
OCT 4 1930

Dear Sir;

Re. Gordons Indian Residential School.

I herewith enclose copies of the final certificate, with copies of the extras and deductions as checked by me.

I also enclose clearances from the sub-contractors and supply firms who have had an interest in this job. This I have done because so many of these firms have written phoned or wired me during the progress of the work stating that they were dissatisfied with the amounts they were being paid by the general contractors.

The guarantee of the Contractors as called for is also enclosed.

The school is now in use as far as it can be with the limited amount of furniture they have, but there is one item i.e. the ash hoist which is not yet installed owing to delay in shipping the right one. This is expected on the job at any time, and as soon as it is there the contractors will send a man to install it. In the meantime I thought that an amount of say $300.00 might be withheld or the cheque for the final payment might be sent to Shoquist Bros. care of me; to be held until hoist is actually in the building.

Documents enclosed;-

Two copies of final certificate.
" " " Extras & Deductions.
Contractors' Guarantee.
Clearance from Dominion Bridge Co.
" " Dominion Bronze & Iron Ltd.
" " Manitoba Bridge & Iron Wks.
" " North American Lmbr. & Supply
" " W.J. English & Co.
" " Regina Sash. & Door Co.
" " Beaton & Brady Ltd.,
" " Stanley Brock Ltd.

Re: Gordon's Indian Residential School, Punnichy, Sask.

Dear Sir:

In connection with the above quoted works, constructed by ourselves, final certificate for which is in the hands of your department, we will appreciate any effort you can make toward prompt disbursement of the funds due us, in addition to the return of the certified check for $14,000.00, and accrued interest thereon since the retention by the Department. The reason for this request is due to the fact that generally speaking, sub-trades are finding it increasingly difficult during these times to finance their own work, and we are being called upon more and more to make advances, which in normal years would not be the case, and we feel sure that you will be the first to appreciate this factor in a year such as this, and your co-operation to this end is asked.

Yours truly,

SASKATOON, SASK.

Ottawa, October 14, 1930.

Sir:

I have your letter of the 8th instant, relative to the request of the Principal of the Gordon Indian Residential School for an appropriation of $10., to cover the expense in erecting a place to dry clothes. In this connection it is considered that the school authorities should be able to install the cedar posts for uprights and string the necessary wire without requesting the Department to provide the cost. It is noted that there is sufficient wire on hand for the purpose. It is considered that the Principal could obtain cedar posts or other scantling for the uprights and have the work done without cost to the Department.

Your obedient servant,

A. F. Mackenzie,
Secretary.

OCT. 20, 1930.

MEMORANDUM:

Mr. Paget.

As the Shoquist Bros. have completed their contract for the Gordon's School their deposit security cheque should be returned.

I would ask you to send this cheque to Mr. Swan, the Inspector of Construction, as there is still an ash hoist to be installed, and it is the intention that he will hold this cheque and hand it over when the hoist has been put in place.

Sir:-

I recently received a visit from the Engineer who will take charge of the plant at the new Gordon's Indian School, and he informs me that there is not a single tool on the premises of which he will have need. I therefore felt obliged to send an order to Messrs. Wood, Vallance. He gave me a list of what he needed and the cost will be approximately $60.00. I am sure the Department will approve of the action I have taken.

Your obedient servant,

W. M. Graham,
Indian Commissioner.

The Deputy Minister,

Department of Indian Affairs,

Ottawa.

Dear Sir;

Re.Gordons School.

In reply to your telegram of yesterday's date I may say that the contractors have two men on the job in reply to a call from me regarding this and other matters.The matter was a stoppage in the 4" drain from the toilets in basement of the south wing and has now been cleared.The main house drain was not stopped and the other toilets and baths in the building were in constant use.I am of the opinion that the school should be provided with a steel cleaning cable for such cases as this.With a competent man in charge of the machinery and plant a few minutes as soon as a thing like this occurs would put the matter right.
I am glad to report that the ash hoist is now in,and the motor for the pump is being installed in place of the engine.

I have had the Lister people send a man up and go over the lighting plant with me,and am now satisfied that it is in good running order.I have seen it running under the full load that it will be called upon to take.

Your obedient servant,

W. Swan

Dear Sirs: Re Punnichy Indian School
Jas. H. Coe vs. Shoquist Bros.

Our client, Jas. H. Coe, made a successful tender for the plastering of Punnichy School as sub-contractor under Shoquist Bros. He has been paid the amount of the contract price but has been unsuccessful in obtaining the sum of approximately $1,200.00 for extras. He advised us that these extras were approved of by your architect, Mr. W. Swan, and has requested that we write to you with a view to having you signify whether or not you would pay this amount to him direct, or exercise your authority with Shoquist Bros.

We shall appreciate an early reply in this matter.

Yours truly,

BENCE, STEVENSON, McLORG & YANDA,

ALSO TO DATE OF THIS LETTER

COMMISSIONER'S OFFICE.
D REGINA, SASK., Dec. 10th, 1930

Dear Mr. Scott:-

I have just received a report from Archdeacon Knowles, who has returned from the Gordon School, and also from Mr. Waddy, to the effect that the Principal's residence is unfit for occupation at the present time. Mr. Waddy tells me that there is not a house on the reserve that is in such a filthy condition as is this one. The walls are black, and boards have been nailed across the plaster with the result that it is badly broken. The floors are so thick with dirt that it can be scraped off with a hoe. The paint is off the windows and the varnish off the woodwork, and as I say, the place is not in a fit condition for anyone to occupy.

I would ask for your authority to spend between $250.00 and $300.00 to put this residence in shape. In the meantime the new Principal and his family are occupying three rooms in the school building that cannot conveniently be spared.

I am of the opinion that with a lay Principal in charge we may expect a great change in the management of this institution. The man who is going in seems to be clean-cut and aggressive. There is a great deal to be done at the Gordon School to straighten matters out after four years of incompetent management.

I should like to have your authority for this expenditure by wire and I can send a man out from here to do the work, as I do not think we can get a local man. I have given the Principal's wife permission to select the paper that will be used on the walls.

Yours very truly,

W. M. Graham.

Gentlemen:

Re Punnichy School

We have been given to understand that the School at the above mentioned town has now been completed, Shoquist Brothers of this city being the contractors. Linoleum was supplied by us to Shoquist Brothers for this particular job and we would appreciate if you would inform us if they have received payment in full for their services. This information is required by us in view of the fact that Shoquists are still indebted to us for the Linoleum supplied.

An early reply will be appreciated.

Yours faithfully,
For HUDSON'S BAY COMPANY.

January 31st.1931.

The Deputy Minister;
Department of Indian Affairs,
Ottawa.

Dear Sir;

Re.Muscowequan Indian Residential School,Lestock,Sask.Report No. 15.

The weather during the past two weeks has been splendid for outside work.The septic tank i s complete except for the stripping of the inside forming,and this we intend to have done by Thursday next. In order to take advantage of the good weather I had the contractors put the men on to the pit for pump over the new well as soon as they had the septic tank completed,with the result that this pit is now excavated and the concrete floor in,and the trench for pipe from pit to pump house has been dug.The forming for walls is in and concrete will be poured next week.
The Lister men have the plant assembled and in place,and yesterday had it running for a time.As soon as the electrician can get the main line run and the bulbs in the fixtures,which I expect will be by Thursday next,a test will be made under full load.
The Kelvinator engineer has installed the cold storage plant and will be back on the job for a test just as soon as we can give him power.
The plumbing fixtures are all installed and can be in operation as soon as the water system is in.This I understand will be a couple or three weeks yet,as I had word from the Dominion Bridge Co.last Tuesday that they had just got the plans of the pressure tank approved by the Sask.Boiler Inspector.
I have not heard from the Dominion Water Power Dept.,as to what make of pump and motor they intend to have installed and when the machinery is to be here.I am assuming that in the matter of the placing of pressure tank and connecting up etc., you wish me to have the contractors do this as soon as possible?
During the past few days the painter has been able to work outside,and I am hoping that another two weeks will see him through,and the original contract complete with the exception of outside grading which cannot be done until Spring.
Up to the present I have had no instructions from you as to the laundry machinery you intend to install,or how you wish to have the work done.I have arranged for the contractors to install a metal clad door in wall of old building where we connect up with the passage.
I have prepared details of the interior fixtures as instructed

Dear Sir;

Re.Gordons School.

In accordance with your instructions the interior fixtures have been made and the work of installing them has been completed. The work of replacing some of the wooden panels in corridor and vestibule doors with muranese glass hs arranged with Mr.Orr on his visit to the school was done at the same time.

I herewith enclose all accounts in connection herewith with the exception of the account for the fixtures themselves supplied by the Western Manufacturing Company of Regina.This will follow as soon as they have sent in their bill in triplicate.

Your obedient servant,

W. Swan
Inspector of Construction.

Dr Stone

and I note that the following quantities of drugs were supplied

10 lbs.	Carbolized Vaseline	3.00
5 lbs.	Zinc Ointment	2.00
5 lbs.	Mercury Ointment	2.50
10 lbs.	Petroleum Vaseline	10.00
50 lbs.	Absorbent Cotton	15.00
500 yards	Gauze	2.60
10 lbs.	Sulphate Magnesie	2.00
2 gross	Ointment Tins	9.00
1 dozen	hot water bottles	1.00
500	Pill Boxes	47.60

New school initial supply. Possibly too much, but not very serious after all

and many other articles where I think the quantities could have been cut in half. A few years ago at nearly every Agency I visited there were stacks of drugs piled up. because the quantities asked for were too large, and the result was that many of them were valueless. At a school of this kind where I understand we are expected to economize in every way it would have been advisable I think to have reduced this drug order by one half. I understand that Mr. Stanford also sent in this order.

At the Muscowequan School they were still painting and laying the linoleum on the floors and winding up the work. Of course they have not started the work of taking down the old stone building. I cannot give you much information regarding the water supply, but it appears to me that there is sufficient water there. It will only be a short time before the power line will pass this institution, in fact it is being constructed now, and when this is done the lighting and power system that we have installed can be abandoned and used elsewhere. There were about 68 children in attendance, and the Principal says he is going to get 100. This remains to be seen however.

Yours very truly,

W. M. Graham,
Indian Commissioner.

ALSO TO DATE OF THIS LETTER

COMMISSIONER'S OFFICE,
D REGINA, SASK., Feb. 7th, 1931

Dear Mr. Scott:-

I beg to inform you that I have just returned from making a visit to the Touchwood Agency, and the two residential schools, Gordon's and Muscowequan. My visit was of short duration, but I was able to go into a number of matters.

At the Gordon School I found the work almost completed, although there are still some things to be done. The workmanship on the building seems to be first-class. The school is now under the management of Mr. Frayling and he is receiving a great deal of co-operation from Mr. Waddy. At the time of my visit there were 97 children in the school, and in a few weeks time this number will be increased to 120 if not more, according to reports I have received.

There are one or two matters in connection with the Gordon School which I think should receive your attention. I would point out that the drainage from the school to the sewage disposal is in very bad shape and the sewage is backing up over the basement floors. When I was there a quarter of the room was covered with back water and fetid matter, and the stench was unbearable. I am told that it was the duty of the contractor to put this drainage system in first-class shape. I later met Mr. Swan and told him what I had found. As Mr. Swan has been handling the business of the Department I thought he was the proper officer to speak to regarding matters of this kind.

-I have-

Duncan C. Scott, Esq.,
Deputy Supt. General,
Dept. of Indian Affairs,

I have secured for this institution a high class Engineer, which is something we should have in all our schools, a man capable of making repairs and keeping the machinery the way it should be kept. The school is paying a good salary to this man and no doubt will get good results. Since Mr. Frayling, the new Principal, who is a layman, has taken charge he has not had much chance to show what he can do, as he has been handicapped by not having the right kind of a staff. At the time of my visit he was short a Matron, a cook, and a couple more female members of staff. Whether he will be fortunate in securing the right type of people to fill these positions in the near future I do not know. He has advertised for them.

Mr. Frayling drew my attention to the oven, which has been the subject of considerable correspondence, pointing out that the requirements of the school were from 100 to 125 loaves of bread per day, and with an oven of the size which he is to receive it would be necessary to bake every day, including Sundays, and sometimes twice a day. I think he is correct in this, as I checked the matter up closely with the adjoining school, Muscowequan, where there are 68 pupils, and possibly a total of 85 including the staff. At this school they had an oven which is practically of the same capacity as you propose sending to the Gordon school, where they will have from 135 to 140 to feed when the school is filled. This oven was discarded at Muscowequan because it was not sufficiently large to take care of the requirements of this school where they have a pupilage of 68. I have since had installed at this school, as you know, an oven which can provide for the baking of two sacks of flour at a time, and in discussing this matter with the baker at the school she informed me that she bakes from seven to eight sacks of flour a week. This seems a large amount but she assured me it was the quantity used. Every child in the school gets rid of a pound loaf a day, this being the case you will see at once the situation at Gordon's. As the oven you propose sending there has only a capacity of 72 loaves it is quite unsuitable and should not be installed. It seems to me that this is a matter that could well have been left to officers in the field who are doing the actual work and understand exactly what is required. If the Department insist on supplying this type of oven we might as well have installed the one which was discarded at the Muscowequan School.

Another matter which was brought to my attention was the fact that the large outdoor cistern that we built in connection with the school that was burned down is intact, but there is no way of getting the water out of the cistern and through the house. This should have been attended to when the contractors were on the ground. I should be glad if you would have it attended to.

I am sorry to report that some of the furniture which was bought for the school is absolutely unsuitable. There is an extension table in the dining room, which was bought from the T. Eaton Company. This table is very light and already has a sag in the middle, and they have it braced up with a wooden beam. However, I found that there was a dining room table in the basement, which had been made; this can be used and there was no necessity for buying the light extension table from Eaton's.

My attention was also drawn to the fact that a lot of the cupboards which were made and delivered are not necessary. I do not know what was ordered, but I saw six cupboards which had been built for books scattered here and there throughout the building and they are trying to use them for clothes cupboards. I asked why these were not being used for the purpose for which they were built and was told they were not required. I also found two other cupboards which were of no use. One had been set up and the other was going to be taken out to the storehouse. These cupboards had all been made on the recommendation of Mr. Stanford, Before we even started to furnish the school I wrote and asked the Department not to act on Mr. Stanford's recommendations. Had this been adhered to we would have saved hundreds of dollars.

Might I suggest that when orders for drugs are received they be very carefully scrutinized. I found the new drug room at the Gordon School filled up with drugs, some in sufficient quantity to last for ten years, a most disorderly mass of stuff unpacked and scattered around, as it could not all be packed on the shelves. I have a copy of the drug invoice before me, -and I note-

Feb. 12, 1931.

Sir,-

It has been reported to the Department that the sewerage system at the new Gordon's School is in bad shape, that the sewage is again backing up into the basement floors. Will you kindly examine this drainage system and submit to the Department a report with your recommendations. I would also ask you for a report as to the advisability of providing a means of obtaining water from the outside cistern which was built in connection with the school that was burned.

It has also been reported that a lot of the cupboards which were made and delivered to this school are not required. If this is the case kindly submit a list of the cupboards, etc. that are not being used in order that arrangements can be made to have them shipped to the Muscowequan School, and the items deducted from the list of equipment there before the order is placed.

I will be glad to have this information at the earliest possible date.

Your obedient servant,

A. F. MacKenzie.

Immediate
Architect

COMMISSIONER'S OFFICE,
REGINA, SASK., 13 February 1931

Sir,

I beg to advise the Department that the service installation of Gordon's School, Punnichy, Sask., was inspected on 15th January 1931 and does not conform to the requirements of the Canadian Electrical Code, Part 1, in the following respects:-

No branch cut-outs in "E" Box where wires change in size. The positive wire that runs from the panel to the front chapel lights are grounded to the conduit of the same run, causing a short circuit. Loom service used for entrance to barns and outlying buildings. Wires run down the side walls of the barns without any protection from hay or straw that might be piled against them. Building has not got a separate distribution panel for each floor.

The following changes are required to meet the approval of the Saskatchewan Power Commission:-

Install branch cut-outs in "E" box where wires change in size. Run two new wires from panel to front Chapel lights. Install conduit service to outlying buildings and ground conduits of same. Board in wires on walls of barns so that wires are protected from hay, straw, and mechanical injury.

Mr. Swan informs me that the cost of the above work will be $90.00 and I shall be glad to receive authority to have it done while the electricians are there as it will cost a great deal more to send them back again. The above changes will make the installation safe and efficient.

Your obedient servant,

W.M.Graham

Feb. 17, 1931.

Sir,-

Replying to your letter of the 13th instant, with reference to the additional work required in connection with the electric lighting system at the Gordon's School in order to conform to the requirements of the Canadian Electrical Code, I beg to say that you may arrange to have this work done.

In the specifications for this building, Paragraph 2, Page 52, it was provided that the work was to be done in accordance with the Rules and Regulations of the Canadian Fire Underwriters Association and the Rules and Regulations covering such work in the Province of Saskatchewan. It would therefore appear that the cost of making the changes mentioned in your letter should be paid for by the contractor.

Your obedient servant,

A. F. MacKenzie.

Dear Sir;

Re.Gordos Indian School.

I am at a loss to know where you could have had a report that a lot of the cupboards made for the above school have not been used. There is one set of book shelves 10'.6" x 7'.0 with adjustable shelves which was for the principal's living room,but which has not been put in place as the new principal,Mr.Frayling,has nothing like the number of books that the Rev.Stanford had;and therefore did not want to have the shelves put up. They are at present in K.D.form at the school. There were a number of changes made in placing some of the fixtures as naturally the new Principal did not have exactly the same ideas as the old Principal.

The matter of the connection to the rainwater tank was one of several things that the late Principal had agreed to have done. Nothing was specified for it, and in view of the fact that Mr.Stanford had asked for quite a number of extras in other ways he agreed to take care of this item. The tank is underground right outside of the laundry wall and it will merely be a matter of using a small hand pump in the laundry, with the pipe running down through the floor and into the tank.

Might I be permitted to say that a rather difficult situation arises when a new principal is appointed just as a new school has been handed over to the old principal;so many of the little things which were made to conform to his ideas do not meet with the approval of the new man, who knowing nothing of the specifications wants to know why this or that is not provided.

Feb.16th 1931.

A.F.MacKenzie Esq.,

Secretary,

Dept.of Indian Affairs,

Ottawa.

Dear Sir;

Re.Gordons Indian School.

In replying to yours of the 12th inst.,received this morning, I beg to say that the matter of the drains has had my attention, and I would like to quote from my last letter to the contractors at Saskatoon a few days ago;-"It must be clearly understood that the Department do not consider the drains in good condition if it is necessary to be pushing cleaning rods through them every other day to keep them in action. This has occurred so often since the school was taken over that I am convinced part of the drain is not up to standard.Should this trouble occur again I must ask you to see that some definite action is taken to remedy the condition."
This backing up takes place on the run of 4" pipe from the lavatories in the Girls' Recreation Room.

Owing to the fact that the ruins of the old school stood for a year before building operations were commenced I was very particular about the use of the existing drains,and cautioned the plumbing foreman,who was a first rate plumber,to see that everything was in good condition;pointing out that his firm had to guarantee the finished job,and anything neglected at that time would be the source of much trouble afterwards.
It is possible that there is a partial stoppage in the line which causes material to accumulate every so often.
I can only suggest that if the trouble occurs again the drain be taken up and relaid.

Your obedient servant,

W. Swan

Sir:-

I have today been reading a report from the Principal of the Gordon's Indian Residential School, in which he states that since the last report the cottage has been painted, and though not finished in a very workmanlike manner it is clean and habitable.

In your telegram to me dated December 15th. you informed me that Dunn and Ward, of Semans, Sask. were to be employed to supply materials and perform labor on the repairs to the Principal's residence at the Gordon School. I was given no option in this matter, and did not have the opportunity of ascertaining whether these men were good workmen or not. In the first place there is only Mr. Ward, Mr. Dunn having left the firm. They do not carry materials, so they would have to go and buy them at probably a greater cost than I would have to pay for them, and it turns out that they are not even good workmen. It seems unfair to spend money without ascertaining whether the men employed are competent or not. As I have pointed out before, I think when we start our building program we should have something to say about who should be employed. I have no doubt that representations were made to the Department that Messrs. Dunn & Ward were capable of handling this work, judging from your telegram to me.

Your obedient servant,

Sir:-

With reference to Department No. 121-1-15 of the 17th instant and my letter of the 13th idem, in connection with the wiring system at Gordon's School, I see that I did not quite properly set out the situation there. The requirements of the Saskatchewan Power Commission are now being complied with by the contractor without expense to the Department, but there are certain safeguards to be adopted in connection with the old wiring in the barns and it is to these that my letter should have applied. The contractor, when on the ground, making the necessary changes in the school itself, will also fulfil the requirements of the Commission in regard to the wiring in the barns, and it is this latter item which will entail an expenditure of approximately $90.00. I have instructed Mr. Swan to see that the regulations of the Power Commission are properly and carefully followed, and, in due course, the covering vouchers for the additional work will be forwarded for payment.

The Deputy Minister,
Department of Indian Affairs,
Ottawa.

R

Dear Sir;

Re.Gordons School,Punnichy,Sask.

Further to my letter of Feb.20th.,re the drains at Gordons School,I have now a letter from the contructors enclosing a report from Messrs.Beaton & Brady Ltd.,the plumbers who installed the drainage,and who recently had a man on the job.In view of the fact that I have told these people that,should the trouble occur again I shall ask them to take up that section of drain,I am here quoting their report in full;-

"Shoquist Bros.,
Saskatoon.

Dear Sirs; Acting on your complaint of Feb.6th,re letter of Mr.Swan's of the 14th.inst.,we sent a man down to the School at Punnichy to investigate.We found the following; That the drain to Girl's Toilet was plugged.Said stoppage being caused by huge wads of toilet paper,which is being used as towels,was rolled up in balls four inches or more in diameter and thrown in to toilet bowl. The system was further handicapped by having the level of the water in flush tank cut down so that there was not sufficient water to carry away the ordinary amount of toilet paper.
We cleared out this stoppage and raised the water level in tank, and left the system in perfect order on the evening of Feb.11th. 1931.
We might state that no system of drainage will function under such treatment.We also wish to emphasize the fact that on two former occasions when requested to attend to complaints,we found the sewer full of water caused by complete stoppage of septic tank and distribution system,which was outside our contract.This last stoppage would not have occured if ordinary intelligence had been used in the use of the facilities provided.

Yours truly, Beaton & Brady Ltd."

My reply to the remark about the septic tank is that if a stoppage occurs there there will be a backing up of all drains, which will show in the boiler room and kitchen first.
With regard to the complaint about misuse of toilets,I am sending the Principal a copy of the report.

Your obedient servant,

W. Swan.

Sir,-

With reference to the recent trouble experienced in the drainage system inside the building at the Gordon's School I would ask you that in future the pupils are not allowed to deposit large quantities of toilet paper in the closets as this blocks the system and causes the flooding of the basement. I would also ask you to see that the flaps in the flushing tanks are not tampered with so as to cut down the amount of water sequired for flushing. It is expected that the school will be operated under the present management in a more efficient manner than in the past.

Your obedient servant,

A. F. MacKenzie.

Mr.W.Swan.
Punnichy.
Sask:

Re Drainage on North or Girls Playrooms.

Dear Sir:-

Replying to the copy of Beaton and Brady's Ltd report.

Mr.Angel our Engineer and his assistant kept with the man sent by them from Saskatoon the whole of the time he worked on the drains, and they only found one small wad of paper (not huge wads as stated), so small that after he had drawn Mr.Angel's attention to it, he threw it back into the clean-out with some Iron Scaling which came down as the drain was being flushed, this scaling Mr.Angel thinks the cause of holding the wad of paper at this particular bend in the drainage.

In November the plumber said that the stoppage on the south side or boys playroom was due to the Septic tank backing up, this could not be the case, because our boiler room drainage is 37½" lower than the boys playroom, if it were so the boiler room would be completely flooded, Mr.W.Swan, Government Inspector of this building will substantiate this.

Beaton and Brady's report is not the fact our Engineer ~~thinks~~ says and thinks it must have been written up by the office and not dictated by the man sent down to investigate.

Yours truly,

Engineer's signature. D. Angel.

SEMANS, Saskatchewan

Immediate Attn

Gentlemen

Ref Ellen a/c for work done & materials found at Gordon Indian School Punnichy

I may say that it is causing us trouble not yet having received payment for this work, We used over 40 $'s worth of materials that we cannot pay for until we get a settlement. We are not in a big way of business & hope you will try & forward this one as soon as possible

We shall have to borrow money to carry on & therefore We shall have to charge you the interest say 5% on the total amount

Awaiting your favors

Yours truly

Ward & Lunn

Sir:-

Re Voucher No. 515 in favour of Ward & Dunn - $191.05

In reply to your inquiry regarding payment of your account, I beg to say that owing to the condition of unemployment throughout the country and other causes, the Appropriations placed at the disposal of the Department for relief, hospitals and medical attendance are exhausted, and until a further supply is obtained no further payments can be made.

I beg to assure you that all proper claims against the Department will be settled at the earliest possible date.

Yours very truly,

A. F. MacKenzie.
Secretary.

Dear Mr. Scott:-

The Northern Electric Company have telephoned this morning to say that the Gordon School authorities have returned to them the following,-

66 - 100-watt electric bulbs
6 - 150-watt " "

These were bought by the late Principal I believe. They have been used and therefore cannot be taken back by the Northern Electric Company. The bulbs were altogether too large for our requirements and should never have been bought. I was just thinking perhaps it would be possible to find some place in the Department at some other point for these bulbs. You might advise me.

Yours very truly,

W. M. Graham,
Indian Commissioner.

SCHOOLS BRANCH
MAR 26 1931

Dear Mr. Scott:-

Venerable Archdeacon Knowles has just returned from making a visit to the Gordon Indian Residential School, and has made a request to have certain articles supplied, and some slight additions made to the interior of the poultry house, which was not completed last Fall.

A bread mixer is badly needed here. It is impossible for them to carry on and do the baking by hand for the large number of children that are in the school, to say nothing of the staff. I would therefore strongly recommend that a bread mixer be supplied, with a capacity of about one barrel. There is no mangle in the laundry, and it is very necessary that one should be supplied, also a stove for heating the irons.

I think the requests made by the Archdeacon are most reasonable, and the cost involved will not be great. I would therefore be glad to have your authority to make the necessary purchases.

I am not sure that the Department make it a practise to supply playground equipment but this school has never made demands on the Department for articles of this kind, and if it would be possible to make a small

grant of , say $50.00, for the purpose of buying equipment I am sure it would be greatly appreciated.

The information I have at the present time is that it will not be long before the pupilage at this school will be 135 or 140. The report of the Archdeacon to me is that the new Principal, Mr. Frayling, is enthusiastic, and that he appears to be carrying on his work in a satisfactory manner. He states that the premises and the interior of the building are immaculate, and that the Church authorities are insisting on a competent staff being appointed. They intend to employ a high-class Farming Instructor as soon as one can be found. They have asked me to assist in locating such a man.

Yours very truly,

W. M. Graham,
Indian Commissioner.

No. 312-11A C.E.
ALSO TO DATE OF THIS LETTER

COMMISSIONER'S OFFICE,
W. REGINA, SASK., 26th March, 1931.

Sir:-

I have received a letter from Mr. J. W. Waddy, submitting a request by the Principal of the Gordon's Indian Residential School to be supplied with the following equipment for the engine room at this institution:-

1 - 10" split wood pulley 4" face 1¾" bore
10 feet 2" leather belting
12 - 15 amp plug fuses
12 - 25 " " "
6-25 " cartridges
1 box assorted stove bolts
1 " " machine "
1 carpenters plane

I think it would be as well to furnish the school with this, as the plant and so forth is new, and I shall be glad if the Department will give the necessary authority.

Your obedient servant,

W. M. Graham,
Indian Commissioner.

121-1-5.

Ottawa, April 1, 1931.

Sir:

I have your 312-11A C.E. of the 26th ultimo, and, in reply, I have to authorize you to supply the fittings, etc., listed in your letter as required at the Gordon's Indian Residential School.

I am directed to acknowledge also your letter of the 21st ultimo, in connection with requests for this school. You may purchase a dough mixer, after determining just what is required, from a suitable source of supply. No unnecessary expense should be incurred. I regret there are no funds for a mangle in the laundry, but you may supply a flat-top stove for heating irons. There are no funds at the present time for playground equipment at this school, other than footballs, a playground ball, etc. If the Principal will make a requisition for what he requires, this will be supplied by the Department.

I have also your letter of the 21st ultimo, regarding the electric bulbs which are surplus to requirements at this school and which have been returned to the Company. You may arrange to ship these, with letters of explanation, divided among the following Indian Residential Schools, which have electric power: Portage, Brandon, Elkhorn, Birtle, Qu'Appelle and Duck Lake.

Your obedient servant,

A. F. MacKenzie,
Secretary.

Wm. Swan Esq., Architect,
Punnichy, Sask.

Copy only of this letter retained on file by Wm.Swan.

Dear Sir:

Your favor of the 4th instant duly received, and we have not responded to this earlier as we have to get hold of our electrician to check up the requirements for the work at Gordon's School, and in view of the fact that you do not give Mr. Graham's address in Regina or his official designation, we are submitting this information to yourself, asking you be good enough to forward it to the proper party.

We propose to supply and install:

1 ¾" service conduit for the Principal's house.
1 ¾" service conduit for the Farm Instructor's house.
3 ¾" service conduit for the three barns.

each of the foregoing to have 30 amp enclosed switch with fuses, and to be grounded to 8' ground rod, The wires in barns to be covered with boards to prevent loose straw, etc. coming in direct contact or being liable to external injury.

Our price for this work will be $18.00 per building, total amount $90.00. We will be glad to be favored with instructions to proceed, and immediately this authority is in our hands our man is available to go to Punnichy in 24 hours notice.

Regarding paragraph two of your letter in connection with the drains, Beaton and Brady advised us this morning that they are sending a man down to Punnichy tonight.

Yours truly,

SHOQUIST BROTHERS

Sir,

I beg to refer to the items inserted in the Touchwood Estimates for painting out-buildings at Gordon's School, and to ask that I may be advised by wire as to how much has been allowed. The official opening of this institution is to take place 24th instant and there will be a lot of people present. The buildings mentioned are bare of paint and should be made presentable in time for the opening. May I please have authority by wire to spend from $600.00 to $800.00 in having the necessary painting done? School help will be employed as far as possible.

COMMISSIONER'S OFFICE,
REGINA, SASK., June 23rd, 1931.

Sir:-

I beg to forward herewith and recommend for payment Regina Voucher No. 311, amounting to $76.49, in favour of the Northern Electric Co. Ltd., Regina, Sask. This amount covers the following invoices:-

July 3/30	-	No.R.6770-D	$34.49
Nov. 3/30	-	No.R.1412-S	24.00
Dec. 2/30	-	No.R.1412-D-1	18.00

These represent fixtures etc., for the new school, ordered by Mr. Stanford when in charge of the Gordon's Indian Residential School, Touchwood Agency. The bills have been presented to the school for payment when they should be paid out of the appropriation for the new building.

As far as I know, the purchases were an arrangement between Mr. Swan and the late Principal. They are installed in the new building, and are vouchered for on the certification of the school resident engineer, and should have been presented direct to the Department for payment by the Department building Inspector when invoiced in the first place.

Your obedient servant,

W. M. Graham,
Indian Commissioner.

JUL 21 1931

COMMISSIONER'S OFFICE,
D
REGINA, SASK., July 15, 1931

Sir:-

I beg to inform you that on the occasion of a recent visit to the Gordon's Indian Residential School my attention was drawn to the fact that an amount of $50.00 had been placed in the Estimates to cover fencing at the Home Farm, also an amount of $200.00 for a playground fence. We have not yet been advised as to whether or not these amounts have been allowed. I would point out that this should be allowed, as the Gordon School has had very little allowed it in connection with fencing or other work since it was taken over from the contractor.

There is another matter which I particularly wish to draw to your attention, and would ask you to reconsider, namely the supplying of paint to give the outbuildings at least one coat of paint, otherwise the walls will all crack, and it seems an absolute waste of money to put up buildings and not protect them. If the Department could see its way clear to grant $150.00 for the paint I would see that the buildings were painted.

Your obedient servant,

W.M.Graham,
Indian Commissioner.

Ottawa, July 24, 1931.

Sir:

I have your 312-11A C.E. of the 15th instant, regarding the providing of the funds required to cover the cost of fencing at the Gordon's Indian Residential School and also to supply the paint required to give the outbuildings a coat of paint.

In reply I have to say that we have no funds to provide for the fencing. Approval is granted for an expenditure not exceeding approximately the sum of $150 in providing the paint required to give the outbuildings a coat of paint, and I shall be pleased if you will arrange to have this work carried out, forwarding accounts in the usual manner covering the cost of the paint and for any labour that it may be necessary to employ.

J. W. Waddy, Esq.
The Indian Agent,
Dept. of Indian Affairs,
Punnichy, Sask.

Dear Mr. Waddy:-

The enclosed is the Floor and Dado footage.

You already know that the paint is practically off;

Mr. Swan informed me the Contractors are responsible for the re-painting, but this responsibility expires twelve months from the time of passing over to the Indian Dept.

The Re-opening of School is not far off, and the work should be put in hand without further delay.

Yours very truly,

(Sgd) R. W. Frayling

Sir:-

I enclose copies of letters which I have received in regard to the condition of the painting at the Gordon Indian Residential School. You will note that it is defective, and the Contractors, Messrs. Shoquist Bros. should be called upon to make good the defects. The areas which require to be re-covered are given in the copies of the documents enclosed.

The Contractors' responsibility, I understand, will cease in September next, as it would appear that Mr. Swan, the Inspector of Construction, took the building over from them on the 26th of September, 1930.

Your obedient servant,

W. M. Graham,
Indian Commissioner.

Dear Mr. Scott:-

I beg to report that the lake which supplies the water for the Gordon Indian Residential School, Touchwood Agency, has got so low this summer that the intake pipe to the deep water tank, used to collect water at the edge of the lake, is nearly exposed, and will soon be useless. It would be a big job to lower the pipe, and if this were done, the tank would also have to be lowered to provide storage capacity, quite a costly proposition.

I understand that Messrs. McPherson & Thom have looked into the matter, and they suggest that we use a small engine and pump for the job. A sketch showing the exact situation is attached. This sketch was prepared by the engineer. The water is quite deep yet, I understand, and if a pump were supplied, it could be installed. The cost will be in the neighbourhood of $125.00.

Yours very truly,

W. M. Graham,
Indian Commissioner.

Dear Sir:-

Your letter of the 1st. instant to hand re Anderson's claim, in reply I wish to state that Anderson took the claim to Court last November, and as Anderson had signed clear for all wages due on that particular job my solicitors had no difficulty in having him non-suited with costs.

I am yours truly,

sign. "John M. Cruise"

SASKATOON. SASK.

COPY.

Sept. 1st. 1931

Ono M. Cruse, Esq.,
520 Avenue G, South,
Saskatoon, Sask.

Dear Sir:- Re: A. Anderson vs. You

Mr. Anderson, who worked for you as a Painter on the Indian School, near Punichy, in 1930, has asked me to collect from you the sum of $99.00 being the balance due to him according to the fair-wage clause in the contract covering the above work. It appears from the specifications that Painters should be paid 80¢ per hour, while you in fact paid Mr. Anderson off at 65¢ per hour, which at 660 hours makes the balance for which he claims.

Mr. Anderson has asked me to take the matter up with the Department of Public Works at Ottawa, but I suggested that the matter be referred to you first, and,only in case you refused to adjust the difference, should he report the matter.

I shall be glad to know what you intend to do about it. It appears that the General Contractors may be involved, but that would be a matter between you and them

Yours truly,

HARRY H. WALBERG

September 3rd. 1931

Re

Department of Public Works,
Indian Affairs,
Ottawa.

Dear Sirs:- Re: A. Anderson vs. John M. Cruse, and
Indian School, Punichy, Sask.

I am enclosing herewith copies of two letters, one written by myself and the other written by John M. Cruse in reply to mine, and which letters will be sufficient in themselves to explain Mr. Anderson's claim.

The Court referred to by Mr. Cruse, was, I am informed, a case before Mr. D. D. Campbell, J.P.

Mr. Anderson further explains that he signed for the wages he received, but is not aware that hesigned anything more. He only learned subsequently to being paid off that he had been paid less than provided for by the specifications governing the construction of the Indian School at Punichy, Sask., and for which Schoquist Brothers, Saskatoon, Sask., was the general contractors.

I have been asked by Mr. Anderson to report the matter to you and to ask that he receives the wages which your department intended should be paid in the first place. I would be obliged to learn your attitude in the matter. If the contractors were paid by your department in accordance with the schedules of wages forming part of the specifications and contract, there should be no question of this man recovering the balance apparently due to him.

Yours truly,

HARRY H. WALBERG

IN YOUR REPLY REFER TO
No. 312-11A C.
ALSO TO DATE OF THIS LETTER

COMMISSIONER'S OFFICE,
W. REGINA, SASK., 24th September, 1931.

Sir:-

I beg to inform the Department that the water system at the Gordon's Schol has ceased to function on account of the scarcity of water. The lake has gone down below the level of the tank, which is situated on the bank of the lake, and therefore the water will not run into the tank by gravity. A new tank will have to be constructed near the school buildings and a new pump house erected at the lake shore. A ditch will have to be sunk from the pump house out to where the deep water is and a pipe put in below frost level. The cost of this will be in the neighborhood of from $1500.00 to $1700.00, and I will be glad to have your instructions in the matter. The present system cannot be made to work. I have had an expert go out and examine it.

Your obedient servant,

W. M. Graham,
Indian Commissioner.

Sir,-

Replying to your letter of the 24th ultimo, with reference to the water system at the Gordon's School, I beg to say that the department has no funds at the present time to carry out the suggestions contained in your letter.

This system has worked satisfactorily and will continue to work satisfactorily providing the water level of the lake is high enough. Will you please let me have your views as to the possibility with the fall rains of the level of the lake rising.

Your obedient servant,

A. F. MacKenzie.

C O P Y

POTTS & MILLER LIMITED
Sanitary & Heating Engineers
Phone 3338

Regina, Sask.,
Oct. 14/31.

Mr. W. M. Graham,
Indian Commissioner,
Regina, Sask.

Dear Sir-

With reference to the water supply system at Gordon's Indian Boarding School which was inspected by our Mr. Miller a couple of days ago, we beg to report as follows:-

There is two ways that the water pipe can be installed in the lake, first by building a Sofferdam and then dig a trench deep enough so that the pipe would be below the frost line and secondly by laying the pipe on the bottom of the lake and then cover this pipe with earth and stones of sufficient depth to protect it from frost.

The cofferdam proposition would be considerably more expensive than laying the pipe on the bottom of the lake, so we are recommending the second scheme, that is to lay the pipe on the bottom of the lake and cover with sufficient earth and stones to protect from the frost.

We recommend that a pump be installed close to the lake, as the level of the lake is so low that the pump in the School will not lift the water at present, the pump to be installed in a well insulated building on the shore of the lake above high water level.

We also recommend that the water be pumped from the Pump at the lake to a tank of sufficient capacity, placed under ground at the most suitable location near the school, as it is not practicable to have a pressure pump so far away from the pressure tank in the School. The tank is required for purifying purposes and would also be a fine reserve supply in case of fire.

We are attaching a sketch showing the pipes as we propose to install them and will be pleased to have your instructions to proceed with the work.

Yours truly,

POTTS & MILLER LTD.

REFER TO FILE NO. 13506

Regina, Sask., September 30, 1931.

Sir:

On May 7th, 1931, Inspector ~~MacDonald~~ McEown, made an inspection of the Vertical Boiler, Return Flue Boiler, and two Hydro-Pneumatic tanks located in the Gordon Indian School at Punnichy, Sask. Some time ago we wrote you regarding the fee for the inspection, but up to the present time we have received no reply.

Please be kind enough to forward your check for $20.00, when we will be pleased to mail you the Inspection Certificates, which are on file in this Department.

Faithfully yours,

Thos. W. Walloy

Deputy Minister.

Ottawa, October 6th, 1931.

Dear Sir:

In reply to your letter of the 30th September, the contents of which have been noted, I regret the necessity for returning herewith the account of $20.00 for inspection of a boiler at Gordon's Indian Residential School. Before this account can be paid it will be necessary, in order to comply with the regulations, to have it certified by the Principal of the School. I shall be glad if you will have this done.

INCL.

Yours truly,

A. F. MacKenzie.
Secretary.

COMMISSIONER'S OFFICE,
B. REGINA, SASK., October 19th, 1931.

Dear Mr. Scott:

I beg to acknowledge the receipt of your telegram of today's date, instructing me to proceed with the work of installing the water system at Gordon School.

I may say that, at the time of receiving your telegram, we had already completed the digging of the trench from the proposed pump-house 20 or 30 feet from the lake-shore to the water's edge, and we are now awaiting a pipe which will be placed at the bottom of the trench, and extended out into the lake some 40 feet. For the first 20 feet we will have to cover the pipe with earth which will be scraped up and filled in on top to a depth of four or five feet. This will be done as soon as the pipe is in place. We have received the shipping bills, and it shoubd arrive from Winnipeg today or tomorrow.

With regard to the tank at the school, the excavation is about completed, and I expect by Wednesday morning to have some person who is qualified in the work of laying concrete, (as this must be done by an experienced person) sent out from here to complete the same.

Duncan C. Scott, Esq.,

COMMISSIONER'S OFFICE,
B. REGINA, SASK., November 3rd, 1931.

Sir:

I have just returned from a visit to the Gordon's Residential School in the Touchwood Agency, and I noted when there that the concrete floors in the children's dining room, the corridors, and the boys' and girls' play-rooms which are in the basement of the building, were hard to keep clean, and when swept they created a great deal of dust.

This cannot be good for the health of the children, and it further makes the building hard to keep clean. I would therefore strongly recommend that these floors be painted. The Principal and his staff would do the work if the material were found for them. The material, I estimate, would cost about $75.00.

I would be glad if the Department would see fit to have this work done.

OK 1450.

SEP 26 1931

Sir:-

I enclose herewith an invoice received from General Steel Wares Limited, of Winnipeg, covering freight on the dough mixer purchased by the Department for the Gordon's School, from Regina to Punnichy, amounting to $6.38. The goods covered by this debit note were shipped from Toronto direct to Punnichy and the goods were sold at a price F.O.B. Regina. The freight charged from Toronto to Regina was absorbed by the General Steel Wares and this debit is apparently for local freight from Regina to Punnichy. It occurs to me that, if the dough mixer was shipped from Toronto to Punnichy direct, the freight charge would be approximately equivalent to the charge from Toronto to Regina. However, I am forwarding the invoice for the attention of the Department.

Your obedient servant,

W. M. Graham,
Indian Commissioner.

Ottawa, 7th October, 1931.

Sir,

I beg to acknowledge the receipt of your letter of the 3rd ultimo, with enclosures on behalf of Mr. A.Anderson who was engaged by John M.Cruse who had a contract for painting the Indian school at Punnichy, and note the facts as set forth in your letter.

In reply I beg to say that the fair wage schedule is posted on the premises at the time of the contract. If Mr. Anderson had made any complsint to the Department of Labour or to this Department during the time of his employment that he was not receiving proper wages his claim would have been considered and payment in respect of the contract would have been withheld pending an adjustment of his claim. It is now however too late to be taken into consideration and there is nothing the Department can do in the matter.

D. C. Scott Esq. C.M.G.
Deputy Superintendent General of Indian Affairs.

Dear Mr. Scott:

I have seen, with great regret, in the daily press a notice of the destruction by fire of the Gordon Indian Residential School. It is most unfortunate that our Anglican School should have suffered two disasters of this kind.

It has occurred to me that the best solution of the situation as it now exists might be the enlargement of the Elkhorn School to accomodate the pupillage of the Gordon School. The manner of the Elkhorn School to whatever should cover a measure of fire protection not obtainable on the site of the Gordon School. Such a consultation would also fall in the plan to develop the Elkhorn School along the line of mechanical training.

Please regard this letter as private and personal and not intended for your official file. Yours very faithfully
S. Gould
Secretary M.S.C.C.

MEMORANDUM

Mr. Buskard -

I have read the attached memorandum from the Parkhill Bedding Co. This firm was not on last year's list and the order was given to the Globe Bedding Company for the beds for the Brandon School by order of the late Minister. As to the statement that the tenders for Brandon were for obsolete designs and specifications discontinued by the Simmons Co. more than six years ago, I am informed by our Architect that this statement is not correct.

The Parkhill Bedding Co. is now on our list and they are being asked to tender for the requirements for the Old Sun's Residential School.

It will also be necessary for us to buy furnishings for the George Gordon school, in the Touchwood Hills agency, and this company may be asked to tender.

DEPARTMENT OF INDIAN AFFAIRS

CANADA

Dec. 18, 1930.

Memorandum: Dr. Scott.

29-30 30-31

The Gordon's Indian Residential School was destroyed by fire on the 1st day of February, 1929, and at that time it was decided to provide an item in the estimates for the next year for the reconstruction of the building. Later on however an item was placed in the Supplementary Estimates. 29-30

When the building was destroyed the only portion left that could be used in the reconstruction of the new school was the foundation. In order to have all the information necessary available for the preparation of the plans a blue print copy of the floor plans of the Old Gordon's School was sent to Commissioner Graham on May 13th, and he was asked to interview the Church authorities and return the blue prints with any changes desired indicated. As no reply was received on June 19th a further request was made to the Commissioner asking that the plans be returned as soon as possible in order that the plans for the new school could be prepared at once. The plans were received here on the 21st of June.

Plans and specifications were then prepared for the new building and on Sept. 5th tenders were invited. They were received on the 30th and on October 17th an Order in Council was passed awarding the contract to Shoquist Bros. of Saskatoon, the lowest tenderer. The work was commenced immediately and the contract completed on the 27th of September of this year.

During the winter months it was necessary to practically suspend operations, but as much work as possible was done when the temperature would permit, in order to assist the unemployment in that district.

Mr. William Swan, Architect of Punnichy, was appointed by the Civil Service Commission as Inspector of Construction. Mr. Swan had acted as Inspector when the old Gordon's School was erected and

www.collectionscanada.gc.ca

his services were satisfactory. The Indian Commissioner also recommended that he be employed for this work stating that he considered that he was one of the most competent men in the Province of Saskatchewan and strongly advised that he be employed.

The new Gordon's Indian Residential School is entirely of fireproof construction.

In the furnishing of the Indian Residential Schools it has been the practice in the past to allow the Principal, after consulting with his staff, to submit to the Department a list of the furnishings required. When this list is received here it is carefully checked in order that the equipment will conform to that furnished other schools. It is necessary to disallow some of the items asked for, and in some cases to make additions. This list is then sub-divided and forms of tender prepared and submitted to the different firms for prices. The names of the firms who are asked to quote are obtained from the Minister's office.

In the case of the Gordon's School the Reverend Principal submitted a list which was carefully checked in accordance with the above proceedure. On August 14th an analysis of the tenders received was submitted to you, with the recommendation that the order be placed with the firms quoting the lowest price. On the following day you submitted these prices to the Minister 's office for consideration. On Sept. 6th you advised the Minister's Secretary that the Minister had instructed that new prices be invited, and on Sept. 16th the Minister's office submitted a list of names from whom prices were to be invited. The following day the forms were sent out to these firms and the prices were receivable on Sept. 30th to Oct. 6th. On October 13th an analysis of the prices received was submitted to the Acting Deputy which was approved, and on Oct. 14th the orders were placed.

When preparing the tenders forms to be submitted to the various firms it has always been found that there are certain items which it is more satisfactory to purchase by personal selection, such as curtains, rugs, and a few small items, these the Principal was authorized to purchase and was advised of the names of firms from whom to make the purchase.

There are certain articles of equipment which it is necessary

to build as they cannot be purchased ready made, such as clothes cupboards, lockers, benches, tables, etc. Mr. Swan, the Inspector, was instructed on Nov. 20th to make the purchase, the names of firms from whom prices were to be obtained being supplied from the Minister's office.

The orders for all the equipment required were placed with the Western branches of the various firms. The type and quantity of equipment, however, is not carried in stock by the branch offices and the orders were therefore forwarded to the head office and the shipment made direct to the School from the factories. Most of these factories are located in the East.

December 22, 1930.

Memorandum:

Honourable Thomas G. Murphy

I have given careful attention to the letter of the 6th December from Mr. P. H. Gordon, K.C., of Regina, and also the letter from Mr. Graham, the Indian Commissioner, dated the 3rd December. These letters refer to the alleged delays in the completion of the new residential school building on the George Gordon's Reserve, near Punnichy, Sask., and delays in furnishing the school.

This school is conducted by the Anglican Diocese of Qu'Appelle, and has for some years suffered from mismanagement which culminated in the destruction by fire of the fine school building. They seemingly have found it impossible to engage a competent person in Holy Orders to conduct this school. I suggested to Bishop Harding and Archdeacon Knowles when they were last in my office, in the autumn, that they ought to select a competent layman. They have selected a layman, and time will show whether he is competent or not.

The Building

The school was destroyed by fire on February 1, 1929. The Main Estimates had been prepared, and as we had obtained our full requirements, the Minister decided not to provide for the school in the Estimates of 1929-30, but to make it a leading item in the Estimates for 1930-31. However, owing to pressure from the ecclesiastical authorities he decided to place an amount in the Supplementary Estimates, and accordingly $90,000.00 was provided. Our Supplementary Estimates went to the Finance Department on the 6th May, 1929, and as soon as they had been approved, on the 13th May, blue print copies of the floor plans of the old school were sent to Mr. Graham and he was asked to interview the Church

authorities and to make suggestions as to the changes in the plans. No reply was received from Mr. Graham, and on June 19th I wrote asking him to return the plans as soon as possible. My letter crossed one from him dated May 21st. I could not understand this and asked him for an explanation, and it appears that the letter was prepared on the 21st May but not mailed, and that the delay of nearly three weeks was entirely owing to negligence in his office. The plans and specifications were prepared, and tenders were asked for on September 5th. They were received on September 30th, and on October 17th the Order in Council was passed awarding the contract to Shoquist Bros., of Saskatoon, the lowest tenderer, $133,895.00. The Department was not hurried in the awarding of this contract advisedly and for the simple reason that we knew $90,000.00 would not build the school and that the construction of the school and payment of the contractor would have to run into the next fiscal year. Mr. William Swan, an Architect of Punnichy, was appointed by the Civil Service Commission as Inspector of Construction. Mr. Graham recommended that he be employed, stating that he considered that he was one of the most competent men in the Province of Saskatchewan. During the winter months it was necessary to almost suspend operations, but much work was done when the temperature would permit in order to assist unemployment in that district. Altogether $51,388.00 was charged to the Vote for 1929-30. Construction went on and the building was completed on September 27,1930. The amount of $86,224.21 was charged to the Vote for 1930-31. The difference between the total amount paid, namely, $137,612.21 and the contract price was for certain extras allowed by the Superintendent of Construction. Considering the winter interval I think the school was constructed with reasonable despatch.

The Furnishings.

As for the general method employed in furnishing these residential schools, I may say that it has been the practice in the past to allow the Principal, after consulting with his staff, to submit to the Department a list of the furnishings required. When this list is received here it is carefully checked in order that the equipment will conform to that furnished other schools. It is necessary to disallow some of the items asked for, and in some cases to make additions. This list is then subdivided and forms of tender prepared and submitted to the different firms for prices. The names of the firms who are asked to quote are obtained from the Minister's Office. We have furnished all our schools under this system

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

POOR COPY

Library and Archives Canada / Bibliothèque et Archives Canada
www.collectionscanada.gc.ca

and it has been found to work well.

When the Gordon's school building was approaching completion the Principal was asked to submit a list which was carefully checked in accordance with the above procedure, and on July 10th the firms named by the then Superintendent General were asked to tender. On August 15th an analysis of the tenders received was submitted to you. After discussion you directed me to obtain new prices, and on September 6th I advised Mr. Buskard to that effect. On September 16th your office gave me a list of names from whom prices were to be invited, and on the following day prices were asked from these firms. The prices were receivable from September 30th to October 6th. On October 13th an analysis of the prices was submitted to you, and on October 14th the orders were placed. In this instance the change of Government was responsible for this delay.

I do not think I should take up your time by controverting some of the statements in Mr. Gordon's letter and by pointing out the characteristic attitude assumed by the Indian Commissioner. I should be pleased to go into the matter further if it is clear to you that I have not dealt with any important point in these letters.

Department of Indian Affairs,
Ottawa, Dec. 31, 1930.

Memorandum,-

Mr. Buskard.

In furnishing the Gordon's School the only portion of the equipment that was entrusted to Mr. Swan, the Inspector of Construction, was the ordering of the cupboards, tables, and other equipment required to be built.

The names of the firms from whom prices were to be obtained were received from your office, and these were forwarded to Mr. Swan. He was instructed to obtain prices from these firms and place the order with the firm quoting the lowest price.

The ordering of this portion of the equipment was entrusted to Mr. Swan as he was considered the most competent person to supervise this portion of the work. All of this equipment required to be built in the mills and Mr. Swan, being an Architect, was familiar with the various details of construction.

2nd January, 1931.

Memo.

Mr. Buskard,

With reference to your enquiry this morning in connection with the Gordon Indian Residential School as to whether Principal Stanford had been asked by the Department to designate the furnishings required for this school after it had become known that his services as principal were unsatisfactory, I have to say, that apparently is the case.

As pointed out , however, in Dr. Scott's memorandum to the Minister dated the 22nd ultimo it has been the practice to allow the Principal after consulting with his staff to submit to the Department a list of the furnishings required. The fact that Principal Stanford's services generally were not satisfactory would not indicate that he was altogether incompetent to designate what furnishings might properly be required for the building. He was still Principal of the school. When such lists of furnishings are designated by Principals they are, of course, checked at the Department to see that they are in keeping with the furnishings generally provided for schools. Some items are invariably disallowed and others added, and that was done in Principal Stanford's case so that it does not appear that any irregularity occurred in connection with the Gordon School furnishings.

January 12, 1931.

Memorandum:

Dr. Scott.

With reference to the bake oven ordered for the Gordon's School I beg to advise you that when the lists were being prepared for the equipment required for this building it was considered that a No. 2 Old Homestead oven with a capacity of 72 single loaves would be ample for their requirements, and this is the type of oven which was ordered from the General Steel Wares of Regina along with other equipment.

Through an error in the office of the General Steel Wares they shipped a pastry oven. When the mistake was discovered here the General Steel Wares were instructed to ship the No 2 Old Homestead oven as originally called for in the order sent them.

The Gordon's School will accommodate 100 pupils and a staff of approximately 12. It averages about half a loaf of bread per day per pupil, which would mean that it would be necessary to bake every three days filling the oven twice at each baking. It takes approximately 1 hour for each baking. The No 2 Old Homestead oven ordered has a capacity of 72 loaves and weighs 3450 pounds. The next size is a No 4, with a capacity of 160 loaves and weighing 5500 pounds.

MEMORANDUM

Mr. Buskard -

Mr. Graham has reported that the water supply system of the Gordon's residential school has ceased to function owing to the scarcity of water. The lake has gone down below the level of the intake well. In order to remedy this condition it will be necessary to rearrange the water supply system which will include changing the location of the pump, lowering the pipe and building a new intake well on the shore of the lake.

Will you kindly give me the name of a reliable firm in Regina who may be employed in connection with this work. As the matter is urgent, the school being without water, I should be glad to have this information as soon as possible.

William Swan, M. S. A. I. C.
ARCHITECT

PUNNICHY, SASKATCHEWAN

Nov. 5th 1931.

DEPT. OF INDIAN AFFAIRS
NOV 14 1931
RECORDS

The Deputy Minister,
Department of Indian Affairs,
Ottawa.

Dear Sir;

Re. Gordon's Indian School, Punnichy.

I wish to point out to you that before your final cheque was handed over to the contractors, Messrs. Shoquist Bros. of Saskatoon, Sask. I secured a letter from them acknowledging that I was not satisfied with the painting of the concrete floors in the basement, and that they would supply enough paint to repaint the whole of the basement floors this last summer. I have written them about this matter as well as several minor ones, but they have done nothing, but write and say that they had written the sub contractor.
I would advise that your department notify them that legal action will be taken against them unless the terms of their contract are fulfilled.

I enclose the letter from Shoquist Bros. for your own files.

Your obedient servant,

W. Swan

Inspector of Construction.

NOV 17 1931
DEPARTMENT OF INDIAN AFFAIRS
NOV 9 1931
RECORDS

Sir:

It has occurred to me that there may now be a sum of $200.00 available for painting at Gordon's School. In July last I asked for and obtained a sum of $150.00 and this was all spent on paint, the labour being furnished by the school. This was sufficient to give most of the buildings one coat, but another coat of paint is necessary to make a satisfactory job, and if the material could be supplied now, the painting could be done in the spring by the school. I think they should be encouraged when they are willing to do the work.

Will the Department please advise me if the paint may be bought?

No [illegible] a note [illegible]

Your obedient servant,

W. M. Graham,
Indian Commissioner.

Ottawa, November 17, 1931.

Sir:

I have your 312-11A. C. E. of the 5th instant, relative to the painting required at the Gordon's Indian Residential School.

In reply I have to say that the Department has no funds available in the present year's appropriation to provide the cost of having this work carried out. A note will be made of this requirement for our Estimates for the next fiscal year.

Your obedient servant,

A. F. MacKenzie,
Secretary.

for emergent repairs to Gordon School.

This expenditure was authorized by Departmental
Letter No. ..... *dated* .....

On my last visit to this school I found that the two large doors leading off the main floor had torn loose. I had to get the frames removed and the brickwork put in shape, and also got the locks on other doors repaired and doors set. I know that funds are low but this work was absolutley necessary if more damage was not caused.

the 2,000 feet of siding necessary, it would greatly improve conditions and do away to a large extent with the dampness which might mean his success or failure with pigs; as hogs do not thrive in damp places, but usually become crippled by rheumatism. At present they have a total of 63 head, including pigs and mature stock.

The two barns have additions which have never been painted and the new drive shed also will need paint.

The cattle are in good condition. The milk supply is low at present, but a number of cows will freshen early in the new year.

The ice house is not on a cement foundation and, as the ice is piled all at one end, the building has settled. The whole building should be jacked up and placed on a proper foundation before being refilled with ice.

A. T. Hamilton Insp.

Mr. Frayling, the Principal, is a hard worker. He has accomplished a great amount of work during the past summer and has made some splendid improvements.

books were tidy and all work neatly set down.

The children were well clothed, clean, and neat in appearance.

The primary work is carried on in the girls' play-room. At one end of this room a partition has been erected. This partition does not reach the ceiling and allows free circulation of air. No girls are in the play-room during class hours, so that there is no dust or interruption.

The various departments were all in operation and the matrons in charge appeared capable. The girls are taught cooking, bread making, and butter making. Some sewing is taught, but the Principal informed me this line of work would be enlarged upon during the coming year. It is the intention to instruct each girl, so that she can make all her own clothes and do other plain sewing. This fall the girls had no instruction in milking, but this work will be carried on during the new year.

The fire escapes are in good condition, also all other fire equipment. Fire drill is observed several times during each month, and the children are able to get out in from two to two and one half minutes. The fire escape doors are unlocked after the children retire. At present the bells connected with these doors are not working, but these are being repaired. The bells will prevent anyone entering or leaving unless the alarm is sounded.

The water system has been changed, and the system now installed should give excellent service and in case of fire will be of added protection. The changing of this system entailed a lot of work, but I would judge this has been well done.

The building throughout I found to be tidy and clean. The dormitories were all well aired and the beds neatly made. The children are provided with night dresses and pyjamas

in which to sleep.

The dining room was clean and the meals appeared to be well prepared. The following is a general menu.

Breakfast - Oatmeal or cream of wheat - cornflakes on Sunday with milk and brown sugar.
bread and butter or jam - tea or cocoa.

Dinner - Meat, vegetables - fish on Friday
pudding, pie once a week, bread,
water to drink

Supper - Potatoes fried, soup, pancakes, egg dishes or beans,
fruit and cake on Sunday
bread and butter or jam
Tea for senior pupils, cocoa for junior.

Milk or cocoa is served at first recess to any children needing special nourishment.

The children are weighed each month and a record kept of their weights. The chart indicates in most cases a fair gain for each pupil.

The grounds have been greatly improved since my last visit, and present a good appearance. A proper road three quarters of a mile long leading to the school has been built and gravelled. This road has been well fenced along with all the play-grounds. These improvements represent a lot of hard work and expense and have transformed the surroundings.

A new drive shed has just been completed, made al most entirely from material gathered from some old dilapidated sheds. The hog pen has been enlarged to almost twice its original size. The addition is on cement and all floors are cemented. The building is completed except for the siding, which the Principal is unable to get due to lack of finances. The building is all occupied and I found the walls of the new part covered with frost and the shiplap slightly bulged from the moisture. If it were possible for the Department to provide

- the 2,000 feet -

the 2,000 feet of siding necessary, it would greatly improve conditions and do away to a large extent with the dampness which might mean his success or failure with pigs; as hogs do not thrive in damp places, but usually become crippled by rheumatism. At present they have a total of 63 head, including pigs and mature stock.

The two barns have additions which have never been painted and the new drive shed also will need paint.

The cattle are in good condition. The milk supply is low at present, but a number of cows will freshen early in the new year.

The ice house is not on a cement foundation and, as the ice is piled all at one end, the building has settled. The whole building should be jacked up and placed on a proper foundation before being refilled with ice.

A. J. Hamilton
Insp. Ind.

Mr. Frayling, the Principal, is a hard worker. He has accomplished a great amount of work during the past summer and has made some splendid improvements.

RECORDS

IN YOUR REPLY REFER TO
No. 312-11
ALSO TO DATE OF THIS LETTER

COMMISSIONER'S OFFICE.
REGINA, SASK., January 4th, 1932.

Dear Mr. Scott:-

I am enclosing herewith a report received from Mr. Inspector Hamilton on the various schools in the Touchwood Agency.

Gordon's Residential School

You will note that up to the time of the Inspector's visit, no instruction in milking cows had been given the girls, but it is the intention to do so during the coming year. I am drawing the Principal's attention to this matter, asking him to see that it is attended to.

The menu furnished these pupils appears to be fairly evenly balanced, and should be sufficient.

On Pages 4 & 5 reference is made to the pig pen which was enlarged by using scrap material found around the school. The Principal is unable to complete the building, owing to lack of funds. All he requires is 2,000 ft. of siding. I asked for authority to purchase the necessary material some time ago, but it was refused. The Department may now feel that they have sufficient funds to make the expenditure. The cost would probably be around $100.00.

I would draw your attention to the fact that the fire escape doors at this school are not kept locked all the time. The matter of looking after the children here is just as difficult as at any other point, but still the Principal is able to carry out the idea of keeping the doors leading to the fire escapes unlocked.

Duncan C. Scott, Esq.,
Deputy Superintendent General,
Dept. of Indian Affairs,
OTTAWA.

The work

www.collectionscanada.gc.ca

Muscowequan Residential School

The work here seems to be carried on in a satisfactory manner. They are no doubt handicapped by not having a properly equipped laundry.

You will note that the doors leading to the fire escapes here are never locked.

I understand that the Principal of this school, Father Poulet, has been transferred. This is unfortunate as, from reports I have received, the new Principal who has been appointed, Father Bousquet, is not in the same class as Father Poulet.

The two day schools appear to be carrying on in the usual way.

Yours very truly,

W. M. Graham.

W. M. Graham
Indian Commissioner.

Sir:-

On the 16th December last I forwarded for payment Touchwood Agency Voucher No. 458 in favor of Mr. W. C. Wright, 1456 Montague Street, Regina, covering his account for superintending the work on the water works system at the Gordon's Indian Residential School. I have received a letter from him today enquiring as to non-payment. Will you please look into the matter, as the voucher may have been overlooked.

Paid 27/1/32

I may add that I am also informed by Messrs. Potts and Miller Limited that their account for $965.95, forwarded from here on the 22nd December last, has not been paid either.

Your obedient servant,

W. M. Graham,
Indian Commissioner.

SCHOOLS BRANCH
JAN 30 1932

Dear Sir;-

I beg to report that at the Gordon Indian Residential School there are over fifty benches in the dining room and recreation rooms which require to be repaired. They were not build strongly enough and are falling apart.

Material O.K.

I have had a carpenter examine these seats and he states that they require to have 1X4 strips attached to the legs, close up under the seat tops, and have small braces attached also. He states that cost of this including labor and material would be 80¢ per seat. It is necessary that something be done to put this furniture in repair.

Sch carpenter with assistance 6 days

Sir:

I have your letter of the 19th instant, relative to the condition of the benches in the dining-room and recreation rooms in the Gordon's Indian Residential School.

In reply I have to say it is considered that if the material required to have strips attached to the legs of the benches, in order to strengthen them, was supplied, the school carpenter, with the assistance of the boys, should be able to carry out the work required. You may arrange to purchase the material required to place the benches in a satisfactory condition, and you should forward an account, in duplicate, properly certified, covering the cost.

Your obedient servant,

T. R. L. MacInnes,
Acting Secretary.

EX

Ottawa, February 2, 1932.

Sir:

I have been directed to acknowledge receipt of your 312-11 of the 4th ultimo, enclosing the report of Mr. Inspector Hamilton on the various schools in the Touchwood Agency. I regret that the acknowledgment of this letter has been inadvertently overlooked.

With reference to the report on the Gordon's Residential School, I have to say that the Department will approve of an expenditure of approximately $100 in the purchase of the siding required to complete the pigpen. It is noted from the Inspector's report that it would require 2000 feet.

Regarding the painting of the two barns and new drive shed, I have to say that this has been noted for our Estimates for the next fiscal year.

It is noted that the general conditions at this school are satisfactory and that the Principal has carried out a number of improvements during the past season.

Your obedient servant,

T. R. L. MacInnes,
Acting Secretary.

COMMISSIONER'S OFFICE,
W. REGINA, SASK., 27th January, 1932.

Sir:-

I have just received a letter from Mr. J. W. Waddy, Indian Agent at Punnichy, pointing out that the ice house in use at the Gordons Indian Residential School needs to be set on a cement foundation so that the body of ice at one end of the building may not disturb its equilibrium. Part of the building was built to be used as a refrigerator, but it was found that the ice is so well insulated sufficient cold air cannot be introduced into the store room. A change therefore is desirable. The Principal states that, if he is allowed the sum of $50.00 with which to purchase the material, he will undertake to have the necessary work done.

I shall be glad therefore if the Department will let me have authority to direct him to buy the necessary material.

Your obedient servant,

W. M. Graham

AGENT'S REPORT

Respecting the Gordon Indian Residential School

For the month of June 19 32.

ROUTINE

At the time of my visit there were:—

101 pupils in the classrooms.

Are the classroom registers kept up to date? Yes

20 pupils in vocational training departments.

..... pupils sick.

..... pupils absent. Reasons .....

121 Total number on roll.

Are there any pupils in residence whose admission has not been approved by the Department?

No

HEALTH, SANITATION, Etc.

Appearance of pupils: Healthy and clean.

Cleanliness of school: V.G.

Appearance of school grounds: Tidy.

Care of the sick: Under supervision of matron.

The children's meals: Plenty of food is supplied. Milk, eggs, cereals, butter, bread, beef, fruit, fish, puddings, cake, jam tea, cocoa, according to what meal is being supplied.

Fire drill, escapes and protection: Fire drill at intervals.

VOCATIONAL TRAINING

Domestic Instruction: The big girls do all the work of the place under supervision of the staff.

Instruction in Farming and Gardening: A good garden and farm is operated.

Training in the care of live stock: The big boys look after the live stock.

Manual training: Soft ball at present.

Care of agricultural machinery and other equipment: Very good.

GENERAL

Discipline at the school: V.G.

Efficiency of the staff: "

General management: "

Suggestions .....

R.

Dear Sir;-

I have the honor to enclose the report on visit made to the Gordon Indian Residential School in June.

SCHOOLS BRANCH
JUL 4 1932

More than the enclosed form is required however. I wish to report that the entire interior of the school has been kalsomined again this spring, this is twice in the past year this has been done, both times at the expense of the school. New fencing has been erected all around the premises, a big extension put on the pig house, body of the barns painted one coat, a road built and gravelled into the school from the highway, trees purchased and planted alongside the new road. In fact the place has so changed in the past year that it is entirely altered. All the above, with the exception of some paint supplied from Regina, has been done at the expense of the school. The Principal tells me it has cost him about $3.000.00 for the new improvements.

He asks that the Department give him some assistance to complete the work, and the following is list of requirements.

1500' hog wire.
50 gal roof stain.
50 " red paint.
20 " white paint.
50 spools fence wire.
3 kegs staples.

Cost of above would be approximately $600.00.

Mr. Frayling also asks that the Department consider the question of a grant to the school of $1.000.00 for the work outlined above. Of course I did not authorise any of it. I think Mr. Graham told him he would try to get the Department to help out on the cost of the painting, fencing and road work done last year.

Your obedient servant,

Indian Agent.

ALSO TO DATE OF THIS LETTER

INSPECTOR'S OFFICE,
W. REGINA, SASK., 26th July, 1932.

Sir:-

I beg to forward herewith Regina Voucher No. 369 being for a frame and cover for the reservoir supplied the Gordon's Residential School by the Webber Foundry, of Regina, amounting to $10.40.

We have made a search of the files here and cannot find any record of this account having been previously forwarded to the Department for payment. I called up Mr. Potts, of Messrs. Potts and Miller, today and he tells me that Mr. Graham arranged for the purchase of the frame and cover for the reservoir and said that he would take care of the matter of payment, which has evidently been overlooked. I am forwarding the voucher herewith, as I am satisfied that the material has been supplied.

Your obedient servant,

W. Murison

Gordon's Indian Residential School

Punnichy, Saskatchewan

Principal
R. W. Frayling

September 12th. 1932

J.Waddy, Esq.
The Indian Agent.
Dept.of Indian Affairs.
Punnichy. Sask;

Dear Sir:-

The High Pressure Vertical Boiler that supplies the Hot Water for Laundry has five (5) Leaking Tubes.

Our Engineer, Mr.Angel says that many others are weak, and advises retubing throughout. Particulars are attached on seperate sheet.

It will be necessary to have a Tube expander for the reconstruction, which can be carried out by our own Engineer.

Prompt attention will be much esteemed, as the fire (5) leaking tubes are plugged to avoid putting the fire out.

Yours sincerely,

(Mr.R.W.Frayling.)
Principal.

RECEIVED

Touchwood Agency,
Punnichy, Sask.
Sept 13th 1932.

11A CE

Dear Sir;-

I have the honor to report that the high pressure vertical boiler at the Gordon Indian Residential School is leaking badly and should be repaired. Five tubes are plugged at present by the engineer but the others are getting weak.

Description.
80 lb pressure boiler used in laundry on washer and dryer, made by E.Leonard & Sons, London, Ont. #291946, diam 26" height 4'6".

Required.
36-2" tubes 3' long for the above.
1- tube expander for re-construction.

SCHOOLS BRANCH
SEP 17 1932

I could not obtain prices locally on cost of these tubes and expander but beg to recommend that they be authorized and they can be procured in Regina. All cost of installation as far as labor is concerned will be assumed by the school principal who states his engineer will do the work, his letter is enclosed.

Your obedient servant,

Indian Agent.

H&W.

Ottawa, September 17, 1932.

Sir:

I have your letter of the 13th instant, enclosing a communication from the Principal of the Gordon's Indian Residential School regarding the condition of the tubes in the high pressure vertical boiler.

In reply I have to say that you may arrange to obtain the number of new tubes of the dimensions required and have them installed. You may also purchase one tube expander. The work of installing the tubes is to be carried out by the school engineer without cost to the Department. After you have purchased the tubes and expander, you should forward an account, in triplicate, properly certified, covering the expenditure incurred.

I would point out, however, that this boiler has only been in use for about three years, and it is not understood why it should be necessary for the renewal of the tubes if proper care was taken in its operation. I should be pleased to have a report regarding this matter.

Your obedient servant,

T. R. L. MacInnes,
Acting Secretary.

Dear Sirs:-

RE: FILE 121-5-5

We beg to acknowledge receipt of your letter of the 11th. inst. with reference to the enclosed freight debit, and beg to advise you that this heater was supplied to the Gordon Indian School at Punnichy, Sask. on an order given to us by the Commissioner's office of your Department in Regina, order #1497.

We have taken this matter up with Punnichy and Regina but have not met with any success. Therefore, we thought that if we sent this along to your office that some action could be had.

An early settlement of this small outstanding amount will be appreciated.

Yours very truly,

GENERAL STEEL WARES LIMITED

Gentlemen,-

It is noted from your letter of the 22nd instant that the item of seventy-six cents (76¢), for which you request payment, covers the difference in freight on a heater forwarded to the Gordon's Indian Residential School in June, 1931. The Department paid the amount that you requested for the heater and, as our appropriation for the fiscal year 1931-32 has lapsed, it is regretted that payment of the item of seventy-six cents (76¢) cannot be made.

Dear Sirs:-

RE: 121-1-5

ATTENTION MR. A.F. MACKENZIE

We have your letter of Oct. 27th. to hand in connection with an outstanding item in your account of last June of 76¢ representing freight on a heater forwarded to Gordon's Residential School.

We regret very much if there has been any misunderstanding between the Indian School and your office in respect to this particular item. We have all along rendered statements showing this item to be outstanding, and we have at different occasions sent duplicates of this charge. Under the circumstances, if the amount was not included in your approbations for the years 1931 and 1932 it was no fault of ours, and there is no reason why we should have to absorb even this small amount.

Under the circumstances, we must ask that you again go into this matter and arrange to let us have your cheque in settlement of this long out standing item.

Yours very truly,

GENERAL STEEL WARES LIMITED

121-1-5

Ottawa, November 5th, 1932.

Sir,-

In June, 1931, the Department supplied the Gordon's Indian Residential School with a laundry heater, which was purchased from the General Steel Wares Limited. We are in receipt of a letter from this firm in which they request payment of seventy-six cents (76¢), which is a balance due for freight on the heater. They state that they have been rendering accounts for this amount to you but have not yet received payment.

Our Appropriation for the fiscal year 1931-32 has lapsed and it is regretted that we cannot, therefore, make payment of the item of seventy-six cents (76¢). It would be appreciated if you would pay this from school funds and close the matter with the General Steel Wares Limited, Winnipeg, Man.

Your obedient servant,

A. F. MacKenzie.
Secretary.

Principal
R. W. Frayling

November 16th. 193

Credit Manager.
General Steel Wares.
Winnipeg. Man.

Dear Sir:-

Your reply to my letter regarding the 76¢ which I am enclosing owing on freight for a Heater shipped to Gordon's School is not satisfactory, owing to the fact that you have written the Indian Department Ottawa, stating many applications have been made to me for this amount.

My letter states that I have not one instance of any such application on file here, and your reply admits no trace of such, in fairness to others in a position such as myself, greater care should be excerised before making such an erroneous statement to our Head Quarters who might think carelessness prevailed, although as I remarked in my recent letter to you, this is really an Indian Department debt not Gordon's School, perhaps your accounting department might find correspondence to some other office.

Yours truly,

Dear Sirs:-

ATTENTION MR. R.W. FRAYLING

We have your letter of the 10th. inst. to hand in which you make reference to an outstanding balance in your account of 76¢ and which was contracted for in August last year.

While we stated to the Department at Ottawa that we had several times taken this matter up with you we have been unable to locate a letter, although, we do find that our Accounting Dept. had been sending forward a statement of the account each month, and we feel that if there was any question about payment of the item that you would have written to this office regarding same. It was only when your Ottawa office suggested that we write the amount off that we advised them that we could not handle the item in this way, and evidently they have since taken the matter up with you.

However, as the amount is only small and is now somewhat overdue it should be cleaned up without further delay, and we would appreciate very much if you would arrange to let us have your remittance to cover at once.

Yours very truly,

GENERAL STEEL WARES LIMITED

SCHOOLS BRANCH
DEC 24 1932

Dear Sir;-

I have the honor to report that the batteries in use at the Gordon Indian Residential School electric plant are used up and require a complete set of replacements as follows.

56 U7 positive groups
56 U7 negative groups
336 wood separators
5 lb sealing compound
3 bridge rests
sulphuric acid for 56 containers.

All above for Globe Light Batteries.

The Electric Equipment Limited, of Regina and Saskatoon have given me prices on the above, with exception of the acid which was not described in the letter I got from the engineer of the school, but from the information I have it would appear that the cost of the above would be in the neighborhood of $300.00. It is necessary that these batteries be put in shape at once as the plant has to be run continually now since the batteries became useless. The Principal of the school has no funds to pay for this work.

I would be obliged if the Department would authorise the supply of above equipment as soon as possible.

Your obedient servant,
Broadley
Indian Agent.

11A. C.E.

Ottawa, December 27, 1932.

Sir:

I have your letter of the 19th instant, regarding the batteries in connection with the electric lighting equipment at the Gordon Indian Residential School. It is noted that these batteries are now used up and that a complete set of replacements is required.

In reply I have to say it is considered that, unless extra attachments were used in connection with the lighting equipment, the batteries should have lasted a longer period. Our funds this year are so limited, that it is difficult to obtain the amount required in the purchase of new batteries. However, as it is necessary that the lighting plant be in good condition, the Department will approve of you obtaining prices, from only those firms on the list to receive consideration, for the supplying of the number of replacement groups as mentioned in your letter and for the quantity of sealing compound, bridge rests and sulphuric acid required.

It is noted that, in other schools where the Globe batteries have been in use, they have not given a lengthy period of service. It is not necessary that this type of battery be supplied in making the replacement at the Gordon School at the present time, and, in obtaining quotations, you should consider other well known and serviceable batteries.

1325.10 92

It is noted, further, that you estimate the cost of the new batteries, installed, will be approximately $300. If possible, this amount should not be exceeded. You should place the order with the firm quoting the lowest price, and, after delivery has been made to your satisfaction, please forward an account, in triplicate, properly certified, covering the expenditure incurred.

Please inform the Principal of the School definitely that the electric light equipment is to be used for lighting purposes only and that no attachments, such as electric irons, stoves, or pumping equipment are to be used.

The purchase and delivery of the new batteries should receive your early attention.

Your obedient servant,

A. F. MacKenzie,
Secretary.

SCHOOLS BRANCH
JUN 7 1933

DEPT. OF INDIAN AFFAIRS
JUN 6 1933
OFFICE OF INDIAN AGENT RECORDS

11 A C.E.

Touchwood Agency
Punnichy, Sask,
June 3rd 1933.

The Secretary,
Department of Indian Affairs,
Ottawa.

Dear Sir;-

I have the honor to report that on my visit to the Gordon Indian Residential School, to-day, I found everything in very fair shape, with the exceptions noted below. The whole of the inside of the school has again been kalsomined and painted this spring at the expense of the school authorities and is very clean. The grounds are kept in good shape, about thirty acres of garden and 120 acres of crop are in, and growing well. The pupils are all well, not one being sick at the present time, they are well dressed and tidy.

The principal asks me if I will enquire from the Department if he is to receive any compensation for the money he has expended on new buildings, roads, fences etc that he has put in since he came here, he says he has spent about $3.500.00 and is under the impression he is to get part of this refunded.

Regards the repairs required here this year I would be obliged if the Department would advise me what money is allowed. What is required principally is a granary the cost would be about $400.00. The root cellar has fallen in and requires to be dug out and the roof rebuilt, the cost of this would be close to $200.00. When this place was being built the money allowed only provided for a roof made of poles, these rot out in about three years.

Remove to authorities for new Roof $ 7.00

The back entry to the school is in bad shape, the stone lintel and the bricks are all coming away from the building, and the door frame is loose; this should be repaired by a competent bricklayer, the cost would be about $50.00 to make a good job as a lot of brick would have to be relaid. In the boys play rooms the plaster above the wainscot for a foot or so is all loose, this should have a strip of board inserted and the plaster repaired, about $25.00 for material and labor.

There is a pen made of poles here for the bull, this is rotten and should be replaced or the animal may get out and damage some of the pupils, a few years ago one did break out and he killed the farming instructor. The principal asks for construction of an iron fenced pen, this might seem to expensive, but something should be done here.

Kindly let me know what the Department can allow for the above repairs etc.

Your obedient servant,
W. Woodcock
Indian Agent.

11 A C.E.

D.A.D.

Ottawa, July 12, 1933.

Sir:

I have to acknowledge receipt of your letters of June 3rd, last, and of the third instant, regarding repairs, the erection of a new granary and compensation to the church authorities for money expended on new buildings, roads, fences, etc., at the Gordon's School.

With reference to the repairs to the back entrance of the school and to the plaster above the wainscot in the boys' playrooms, I have to say that the Department will approve of an expenditure not exceeding the sum of $75.00 in having this work carried out. It is noted that the stone lintel and the bricks are coming away from the building and that the door frame is loose, the cost of these repairs being estimated at $50.00. In the boys' playroom, the repairs required to the plaster above the wainscot should be performed, at a cost not exceeding your estimate of $25.00. I enclose an encumbrance certificate, authorizing the expenditure for the purpose. When the work has been completed, you should forward an account, in triplicate, properly certified, covering the cost of material and labour. Please state on each copy of the account that the expenditure was incurred under authority of E. R. No. 766.

The Department will have no funds to provide a granary or repair the root cellar or for the erection of a pen for the bull.

Regarding reimbursement to the school authorities for the expenditure incurred in constructing the road to the school, I have to say that the Department is not yet aware what funds there may be available for this purpose. There has been a recent demand for a further cut in our Appropriation, and therefore it may not be possible to provide a grant towards reimbursing the school management for their expenditure in the construction of the road. The question of providing a grant for this purpose will have to stand over for the present.

Your obedient servant,

A. F. MacKenzie,
Secretary.

R

ER no 1048

Dear Sir;-

I have the honor to inform the Department that the Principal of the Gordon Indian Residential School has asked me if I will draw to the attention of the Department the condition of the dwelling he occupies and ask if he can get an appropriation to repair the place. The cottage is very small and the lean-to 16x24 has a flat roof; This roof is so flat that the rain continually leaks in and destroys kitchen equipment, plaster and floor, it is a miserable place.

This principal has spent thousands since he came here in building roads, fences, pig-pens etc but spent nothing on his own place, and he has paid so far for all the improvements out of his grant.

He asks that the Department allow him $125.00 to put this cottage in repair, and if there are any funds available I beg to recommend that it be granted.

I do not know if the new form #217 is for this purpose but I enclose one.

Your obedient servant,

Indian Agent.

FORM B

No. 8088

GOVERNMENT OF THE PROVINCE OF SASKATCHEWAN
DEPARTMENT OF RAILWAYS, LABOUR AND INDUSTRIES

Certificate of Inspection of Steam Heating Boilers

Boiler No. 12160

Horse Power 43

I HEREBY CERTIFY that I have this day inspected, under the provisions of Subsection 6 of Section 12 of The Steam Boilers Act, the steam heating boiler and connections located in Gordon Indian School of Punnichy and belonging to Dept of Indian Affairs and that I have found the said boiler and connections to be in Good. condition, and have locked and sealed the pop safety valve so as to admit of no greater steam pressure than 15 pounds to the square inch, as provided by the foregoing Section of the Act.

Repairs ordered .....

.....

.....

Dated this 6 day of Sept 1933

Geo Draayer
Inspector of Steam Boilers

This certificate is good until the boiler for which it has been issued is re-inspected.
The Inspection Certificate shall be exposed in a conspicuous place near the [illegible] and shall be produced at any time by the owner or operator upon demand of the Inspector. Owners who neglect or refuse to post up or produce the Inspection Certificate shall be guilty of a breach of The Steam Boilers Act.

Ottawa, October 19, 1933.

Sir:

I have your letter of the 7th instant, relative to the request of the Principal of the Gordon Indian Residential School, that an expenditure of $125 be incurred to repair the roof of the cottage used by him as a residence.

In reply I have to say that the Department will approve of an expenditure not exceeding the above amount for the purpose of carrying out the repairs. You should arrange for the purchase of any materials required, from a firm on the list to receive consideration. After the work has been completed, you should obtain accounts, in triplicate, covering the cost of the material, and time sheets, in triplicate, for the labour employed. These, you should attach to proper voucher forms, certify in the usual manner and forward for payment. Please state on each copy of your voucher that the expenditure was incurred under authority of E. R. No. 1048, a copy of which is enclosed.

Your obedient servant,

Encl.

Dear Sir;-

In reference to your letter 121-1-5 of October 19th last and to encumbrance requisition 1048 granting $125.00 for repairs to principal's residence at Gordon Indian Residential school I beg to say I have spent $80.15 of this grant for material.

The principal states that he is afraid to go ahead with the job on account of the weather being bad and it may be unsuitable till the end of our fiscal year. He asks if the Department would be in favor of reconsidering this grant of balance of $44.85 next fiscal year if funds are voted by parliament, if not he will attempt to get the job completed this year. He understands our system and knows the Department has trouble getting funds but just wants to know would you recommend the expenditure if you have the money.

Your obedient servant,

Indian Agent.

A SOUND INVESTMENT

Safe Grain Storage

THE

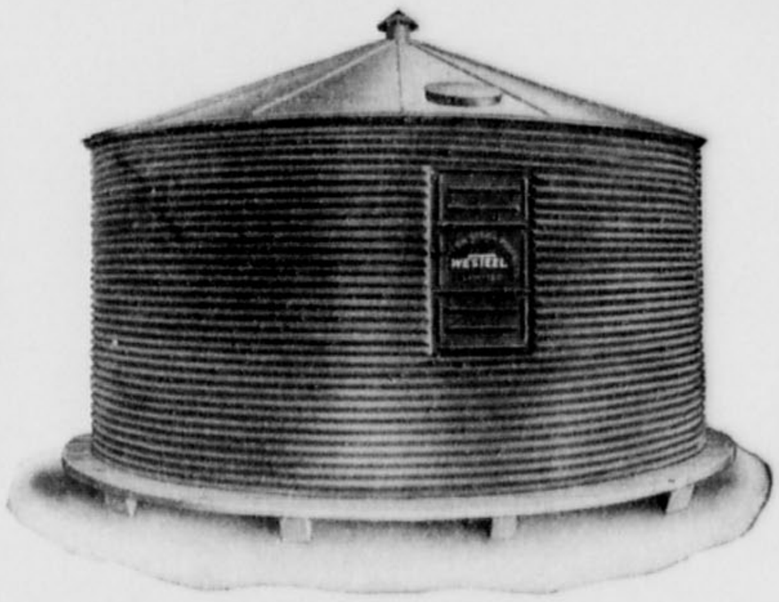

STRONG **WESTEEL** DURABLE

PORTABLE CORRUGATED GRANARY

Fire, Lightning, Storm and Vermin Proof

Construction of Roof

The roof is made of 26 Standard gauge galvanized steel, made in 16 sections each seam being raised, lapped over and bolted to an angle steel rafter. The 16 rafters are bolted to a pressed steel ring at the top and to the body of the granary at the eave. A good sized ventilator is fitted to the peak. In opposite sections of the roof are 16 inch covered manholes for filling from either side, and to provide access when the granary is filled.

Diameter 14 ft. 8 in.—Height 8ft. o in.
Capacity—1,ooo Bushels

Construction of Body

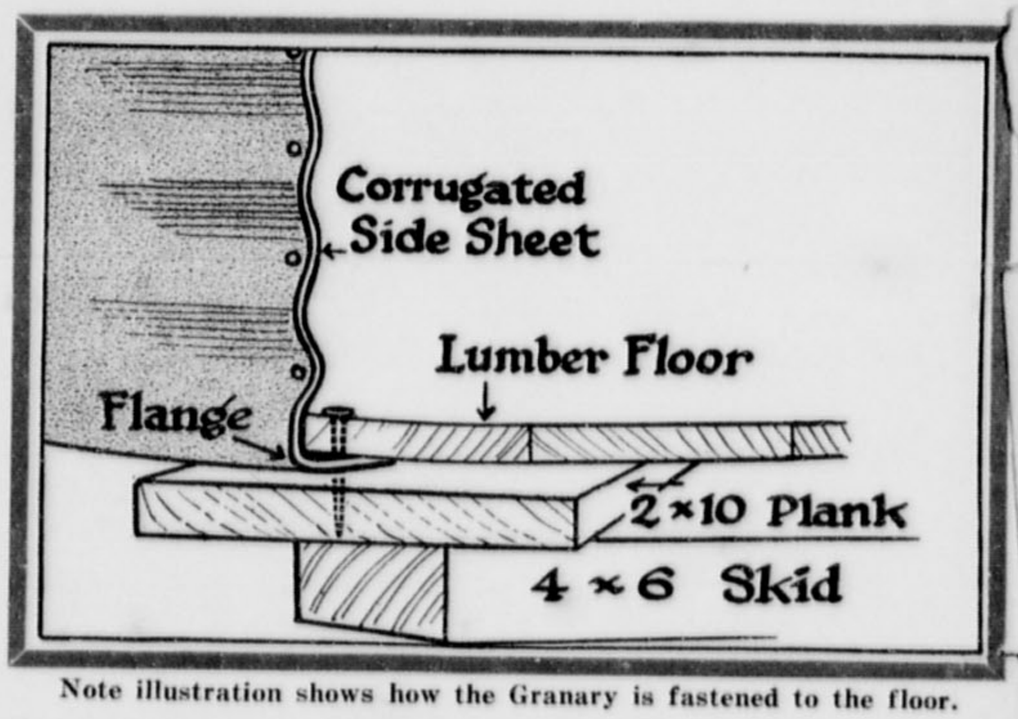

The body of the WESTEEL Granary is made of 24 Standard gauge galvanized steel, corrugated and curved to make it rigid so that wooden framework is not required. Great care is given to the corrugating and curving, each sheet being curved to fit close and snug. The body has great strength and lasting quality, is absolutely fire - proof, damp - proof and vermin - proof and is fitted with the special combinaton door.

Will Not Blow Away

Whether empty or filled with grain the WESTEEL Granary will NOT blow away. From the ventilator to the floor the design, construction and workmanship are combined to make a strong, sturdy, wind-proof building. The strong angle steel rafters are securely bolted to the collar of the ventilator at one end and to the top of the sides at the other

WESTEEL Granaries are shipped out knocked down each part is marked and numbered so that Granary may be easily erected. Lumber floors are cut to fit Granary.

Full erection instructions sent with each Granary.

Note illustration shows how the Granary is fastened to the floor.

PUNNICHY, SASK. April 6th, 1934.

J.W.Waddy, Esq.,
Punnichy, Sask.,

Dear Sir:-

RE: GRAIN BIN.

This will be the fourth year I have made application for the above, and you know the difficulty we had this last Fall with the little crop we took off, apart from the storage of Oats and Barley we have to purchase.

If there is a possibility of a grant for this purpose it would be much appreciated.

A galvanized Bin of medium size would be best, being proof from rats and mice.

Yours truly,

Principal.
Gordon's School.

Dear Sir;-

I beg to report that the Principal of the Gordon Indian Residential School has asked to be supplied with a granary for the school. I put an item in the estimates for this purpose. The local lumber company state they supply these granaries F.O.B.Winnipeg for $115.00, the freight, cost of erecting building etc, would bring the expense above this figure, but it should not cost much above $130.00, and I would be obliged if the Department would approve of this expenditure, the granary is badly required.

Your obedient servant,

Indian Agent.

R. W. FRAYLING

PUNNICHY, SASK. April 6th, 1934.

J.W.Waddy Esq.,
Punnichy, Sask..

Dear Sir:-

The old engine at the lake shore which supplies the whole water system of the School is obsolete. It does not bear any name or number on the engine and many times repairs are unprocurable. Our engineer has made various parts to keep it running .

The situation has become serious and is a great source of worry, fearing it will be completely out of commission any day.

We have two Fairbanks Morse stationary engines in use, which give every satisfaction, and parts are obtainable in Regina, Will you kindly acquaint the Indian Department of this, asking for a Fairbanks or some reputable 6 Horse horizontal stationary engine, and that it be forwarded with as little delay as possible.

In thanking you will remain,
yours truly,

Principal.

Schools

Dear Sir;-

I beg to report that the engine of pumping plant at the Gordon School is continually going out of order, if we did not have a good engineer at the place it would not be possible to use it at all, he is continually working at this machine.

The Principal of the school has asked that he be supplied with a good engine, preferably a six horse horizontal stationary Fairbanks, his letter is attached.

I would be obliged if the Department could replace this engine.

Your obedient servant,

Indian Agent.

The Secretary,
Department of Indian Affairs,
Ottawa.

Ottawa, April 21, 1934.

Sir:

I beg to acknowledge receipt of your letter of the 14th instant, with reference to the necessity for supplying a new engine for the pumping plant at the Gordon's Indian Residential School.

The Department understands that 6 H.P. engines are not now being supplied by the Fairbanks-Morse Company. Either a 5 or 7½ H.P. engine can be secured. Each of these has standard pulley with 6" belt.

Please let me know whether a 5 or 7½ H.P. engine is required. On receipt of this information, the Department will be prepared to place an order.

Your obedient servant,

A. F. MacKenzie,
Secretary.

Sir:

With reference to your letter of the 26th ultimo, I beg to say that an order has been placed with the Fairbanks-Morse Company for a 5 horse power engine, with pulley for 6 inch belt. This is intended for the pumping plant at the Gordon's Indian Residential School.

The cost of the above equipment is $185.00, delivered at Punnichy. Enclosed is E. R. No. 2141, authorizing this expenditure. When certifying the account, you should quote this E. R. number.

11A C.E.

Dear Sir;-

I beg to report that the boiler inspector for the Province of Saskatchewan has condemned the use of a boiler at the Gordon School until it is re tubed. This boiler was retubed in 1932 as per your letter 121-1-5 of Sept 17th 1932. The boiler is a pressure boiler 80 lbs, made by Leonard of London, Ont., 36- 2" tubes 36 in long.

The inspector states that we cannot expect more than two years use from this type of boiler when using the water at Gordons, that it is very similar to Regina water where the boilers have to be retubed about every eighteen months.

The principal of the school states he would take the boiler into Regina and return same to the school by truck if the department would authorise the expense of the work there. I understand that the North West Iron Works Co of Regina would do the work if the Department approves of employing them. I could not quote you a price until I hear who is to do the work, in any case it appears that the work will have to be done as the boiler is out of commission until then.

If possible please wire me instructions.

Your obedient servant,

Indian Agent.

Memorandum:

MR. BUSKARD.

The boiler at the Gordon Indian Residential School has been condemned and it will be necessary to have it repaired as soon as possible. Mr. Agent Waddy states that the Principal is prepared to take the boiler in to Regina and return same to the school, by truck, if the Department authorizes the expenses of the necessary work. Mr. Waddy states, further, that the work could be done by the North West Iron Works Company, of Regina. The cost would be approximately $75. The name of this firm does not appear on the approved list, and I would appreciate your advising if it will be in order to have them do this work.

Dear Sirs:

We have been requested by our clients, Messrs. Shoquist Brothers, of this City, to write you regarding certain work done on the residence of Gordon's Indian Residential School at Punichy. This work was done, we believe, about the month of December, 1930, and consisted of electrical wiring etc., on the house of the resident agent. Our clients sent a man especially from Saskatoon to do this work, and a very reasonable charge of $70.46 was made. This had nothing to do with any contract for the construction of buildings and was entirely a separate item of work. Our understanding is that the agent was transferred shortly after the work was done and through some misunderstanding the account has never been paid.

We would ask you to kindly look this up and let us hear from you at your early convenience.

Yours truly,
KYLE & FERGUSON,

FEB 18 1935

Dear Sir;-

I beg to report that on January 31st last pupil Elsie La Pierre of the Gordon Indian Residential School got her hand caught in the bread mixer and had two fingers amputated afterwards due to the injuries received.

The pupils have been continually told to keep away from the mixer when it is in operation but it seems they feel into the dough to see if it is ready to remove from the mixer. This is the second girl to have her fingers off in this mixer.

The Principal is having a top made for the machine but this will not stop the damage as the girls will still take off the top to look into the machine. This time the girl had her back to the machine and let her hand feel the dough while she was talking to another girl.

Fletcher Singer arm
Dough mixer
1 Bite off finger

Will the Department please advise what is done at other institutions, it looks to me as if the machine should be thrown out and the girls made to mix the dough by hand, or that no one but a staff member be allowed to handle the machine, it is not right that Indian pupils should be exposed to such damage.

Your obedient servant,

Indian Agent.

Ottawa, February 19, 1935.

Sir:

A report has been received regarding the serious accident sustained by Elsie LaPierre, a pupil of the Gordon Indian Residential School, whose hand was caught in the bread mixer, necessitating the amputation of two of her fingers. The Department understands that this is the second girl to receive serious injury in the operation of the bread mixer.

The Department does not understand why there should be accidents occasioned in the operation of this machine. Bread mixers of the same type as at the Gordon School have been supplied to a large number of residential schools, and we have not been informed of any accident, such as suffered by Elsie LaPierre, having occurred at any of the other schools. It is considered that, when the mixer is in operation, it should be under the direct charge of a responsible member of the staff, who should have supervision of the girls working in the bakery. It is not considered necessary that the pupils take any active part when the mixer is in operation. The only alternative would be to dispense with the use of the mixer and have the girls mix the dough by hand. No one but a staff member should be allowed to handle the mixer.

I should be pleased to have a report from you, regarding the accident to Elsie LaPierre and what definite action is being taken to prevent a re-occurrence.

Your obedient servant,

A. F. MacKenzie,
Secretary.

COPY.

February 9th, 1934 5.

J. W. Waddy Esq.,
Indian Agent ,
Touchwood Agency,
Punnichy, Sask..

Dear Mr. Waddy:-

Re: Elsie La Pierre.

On January 31st about 7 P.M. the above was again on Bread Making duty, in which she was an excellent bread-maker. For some reason she says she stood on the opposite side of the machine to her usual custom, and on turning her head to speak to another girl, caught her hand in the Mixer, crushing the two middle fingers on her right hand.

I immediately called up the Doctor, informing him of the accident, and drove with Miss Atwater and the child to town, when it was found necessary to amputate the two fingers at the second joint.

Ordinary care being taken as in other matters, accidents would not happen, but I purpose having a cover made that would prevent such occurrence.

I think it is a Hospital case and it is more than likely a furthur portion of the fingers may have to be removed.

Yours sincerely,

Principal.
Gordon's School.

Re: ELSIE LA PIERRE.

Dear Sir:-

Replying to your inquiry regarding accident to the above, attached is a copy of my report to Mr. Indian Agent, J. W. Waddy.

Girls also make bread by hand, this being a part of the School instruction.

Whilst a girl has always helped with the Bread Mixer, it has been under Staff Supervision. During a short absence of the Supervisor this accident happened.

The girls have always been told NOT to touch the dough whilst the Mixer is in motion.

They are not now allowed in the mixing room during the running of the machine.

Yours truly,

Principal.
Gordon's School.

Mr. R. W. Frayling,
Principal,
Gordon's Indian Residential School.
Punnichy, Sask..

Dear Sir:-

Enclosed herewith please find blue-print showing profile of the ground line on which a dam is proposed to be constructed for the purpose of preventing water at the north end of Lake contaminating the water being used for domestic purposes by the school.

I have proposed a fill 16 feet wide on top and protected by stone on the sides. To make this fill would take about 550 cubic yards of earth and about 60 cubic yards of stone. To have this work done by contract labor would cost from 25 to 30 cents per yard for earth and the placing of stone along the sides of fill, about $1.00 per yard, varying in proportion to the distance the stone would have to be hauled. Some of the stone may be obtained when excavating for the fill. Concrete culverts might be obtained from the local Municipality at comparatively low cost plus cost of hauling from the vicinity of Humby's Lake, where they are made. Altogether the total cost would be about $200.00, this cost might be reduced if done by local labor.

The profile of ground as shown on the blue-print is marked at each end by a blazed tree.

I shall be glad to give you any further information on this matter that you may require.

Yours truly,

(SIGNED.) Sidney Harding.

Gordon's Anglican Indian Residential School

Punnichy, Saskatchewan

PRINCIPAL
R. W. FRAYLING

PUNNICHY, SASK. ..... 193....

I have recently had the levels taken at the Dividing point by Mr. S. Harding, A.M.E.I.C. Surveyor, which his Blue - Print clearly shows, and that the work could be completed for about $200.00.

Apart from cutting off this undesirable half, the proposed Dam would give us a greater volume of Water to draw from, in place of running over the entire Lake as at present, giving depth as well as more and better water.

Should this project be approved by the Department, I would suggest an early start, as the little water that may have been there, is now frozen and the work could be completed before the Spring thaw sets in.

The earth could mostly be taken from near by points, and all work could be done by the local Indians, with one Supervisor.

The question was also raised by Mr. Murison to Dr. McGill when visiting the School and was also mentioned to Dr. Stone.

I would impress upon you the necessity for prompt action, and point out that we are certain to get some added water, and the small cost involved would go a very little way in digging wells, apart from the cost of finding a location.

The Blue - Print with a copy of Mr. Harding's letter is attached.

I will thank you to forward this suggestion to the Department or Mr. Murison.

Yours truly,

Principal.
Gordon's School.

Dear Mr. Waddy:-

Re: SCHOOL WATER SUPPLY.

Serious consideration should be given the above. At the rate the water has receded the last few years, every possible means for conserving should be used.

The Lake (or slough) from which we obtain water is practically divided in half, an elevation, or Island in the centre, with shallow channels on either side. At the present time there is no water connection with the South and North portions. This later portion (the North) is little better than a Cess Pool; Indians camp around there, drive in their Horses and Cattle and sometimes Bathe.

The Sask. Gov't. Laboratory findings have shown for the last 4 years viz; Organic Matter - Quantity; Bacteria per C.C. - Too numerous to count; B Coli - present.

R. H. Murray, C.E. Director of Division of Sanitation recommended that the Resevoir be chlorinated as it was unsafe for drinking purposes. This was done, at the given proportions. Sample after sample was again sent, each time the report was add more lime. And at last, until it can be tasted. This is and has been the practice since, and the proof of its effectiveness is shown by the good health at the School.

I firmly believe that the majority of the contamination has been from the northern end of the lake and should be separated.

SCHOOLS BRANCH
MAR 6 1935

MAR 4 1935

Dear Sir;-

In reference to water supply at the Gordon Indian Residential School, I beg to advise the Department that the Principal has asked that certain work be done regards same, letters from himself and a surveyor are enclosed.

In explanation I may say that the water for the school comes from a large slough which is in two parts, the Principal wants to shut off one part by building a dam. He states that the part he wishes to shut off is that used by Indian cattle and horses when watering. He also explains that if this part were shut off the balance of the area would receive all the water which flows into it at present and thus make the contents higher, all the water coming down a small valley first gets into the area nearest the school.

Mr. Frayling asks for an appropriation of $200.00 which would be spent on Indian labor hauling earth and stone to the proposed dam.

Your obedient servant,

Indian Agent.

11A C.E.

Ottawa, March 7, 1935.

Sir:

I have your letter of the 28th ultimo, enclosing a communication from the Principal of the Gordon's Indian Residential School and also a communication from the Surveyor, with blue print of a proposed dam, to divide the lake from which the water supply for the school is obtained. It is noted that, if a dam was built between the two parts of the lake, it would greatly deepen the part from which the water is obtained and, to a great extent, would prevent contamination to the school supply.

In reply I have to say that the Department will have funds for this purpose after the Appropriation for the coming fiscal year is available - which will likely be early in April. The Department will approve of the Principal, under your direction, arranging for Indian labour in the hauling of the earth and stone required to erect the dam, which should be constructed to the grade line and between the points as shown on the blue print which you forwarded. It is considered that the work could be done under the supervision of the Principal and that it would not be necessary to obtain the services of a foreman to oversee the work. It is understood that the lake is on school property and that the erection of the dam would not conflict with any provincial regulations regarding raising of water levels.

The Principal may begin the work as soon as convenient and weather conditions permit. He should keep proper time sheets, in triplicate, of the labour engaged, which should show the days or hours each man was employed and the rate paid, and these returns should be handed to you. Each Indian employed, when paid, should sign the pay-list. However, no payment can be made until the appropriation is available. No doubt, you have forms on hand for keeping record of the labour employed.

It is noted the entire cost of the work will not exceed the sum of, approximately, $200.00, and it will be expected that a satisfactory job can be completed within the estimate.

An advance to pay the labour will be forwarded, upon request, early in April, next.

Your obedient servant,

A. F. MacKenzie,
Secretary.

RE: LIGHTING PLANT.

Dear Sir,-

The above needs immediate attention. Batteries need re-newing which are 56 - 105 Ampere Hours.

The engines are Lister 6½ and 12 horse respectively. These engines have been in use since the building of the School, with little or no cost and supply the School with light and water. The condition now is such that a complete overhaul is needed by a Lister mechanic.

Prompt attention would possibly save a considerable outlay later.

Yours truly,

Principal.
Gordon's School.

APR 8 1935

Dear Sir;-

I have the honor to enclose application from the principal of the Gordon Indian Residential School for a set of 56 batteries for the lister lighting plant there, and for an overhaul of the plant by a mechanic.

Two years ago the batteries were refilled and remade but the principal says they are going out of business again, they are Globelite batteries.

Regards the plant, the small engine cannot handle the load now, and the large one is not in good order either, I think that if the Lister people had a traveller in this vicinity he could advise as to what is needed. I really do not think that the school mechanic is just the right man on the job, but it is hard to get an allround good man who will take school work.

Ottawa, April 9, 1935.

Sir:

Mr. Agent Waddy has forwarded a request from the Principal of the Gordon Indian Residential School to be supplied with a set of 56 batteries for the Lister lighting plant and also for the overhauling of the plant by a mechanic.

In this connection I have to say that, in January, 1933, the Department incurred an expenditure of $272 in supplying batteries. If proper care was taken with this equipment, the Department does not understand the need for renewing the batteries. We are doubtful as to the qualifications of the engineer at the school who is in charge of the operation of the equipment. Further, it may be that extra attachments are being used in connection with the lighting equipment, thus running down the batteries.

I would request that you ascertain the requirements and also what work would be necessary in overhauling the Lister 6½ and 12 h. p. engines. We understand that Globe batteries are in use in connection with the lighting plant. These batteries have not given a lengthy period of service at other schools.

Please forward full information regarding the batteries required to place the lighting system in a good, serviceable condition, the approximate cost and also the cost of overhauling the two engines mentioned above. When this information is received, consideration will be given to authorizing the expenditure.

I would suggest that you consult Mr. Agent Waddy regarding the above. He is being informed that the matter is being placed in your hands. The Department will be pleased if you will state your opinion concerning the services of the engineer or mechanic who is in charge of the equipment at this school.

Your obedient servant,

Winnipeg, Man.
April 16th, 1935.

The Gordon's Anglican Indian Res. School,
Punnichy, Sask.

Gentlemen:-

Attention Mr. Frayling

As per the writer's conversation with you you will find embodied in this report the recommendations which I made for the operation of your 3 and 6 K.W. Lister Fully Automatic Lighting Plants.

Item No. 1 - That the entire cooling system, that is, all piping, be renewed as the present piping has become so badly corroded that the cooling efficiency of the plant is reduced to approximately one-third of normal. This is very detrimental to the plant as it causes excessive heating on the head which increases cylinder wear as well as higher oil consumption than the engine, under normal conditions, would use.

Item No. 2 - That you change from the grade of oil you are using at present, which is No. 10 to No. 30 or No. 40, preferably No. 40, during the warm season of the year.

Item No. 3 - That the main clapper switches on your switchboard be properly cleaned once a week at least. If the carbons on the clapper switches as well as the brass contacts are not kept properly cleaned, it will evenutally burn out the main coils on the clapper switch.

Item No. 4 - That cylinders on both plants be treated at once with a proper scaling compound to remove all scale from the water jacket.

Item No. 5 - That the oil in these plants be renewed every three weeks and their crankcases properly cleaned out.

Item No. 6 - In checking the present batteries of your lighting plants over I found that in their present state they are now practically useless other than for working the automatic features and the period of time which they will last and continue to operate the automatic features is very questionable. I feel that the question of replacing these batteries should be dealt with at the earliest possible date as I found when checking them over that the positive plates were in such a state that they are quite apt to explode from short circuiting which is caused from the sediment forming in the bottom of the jars and coming high enough up to touch the lower parts of the positive and negative plate causing a short circuit to across them.

- When replacing -

Indian Affairs. (RG 10, Volume 6311, file 654-5, part 7)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

Poor Copy

Library and Archives Canada / Bibliothèque et Archives Canada
www.collectionscanada.gc.ca

When replacing these batteries I would recommend strongly that you replace your present set with a 240 ampere hour rather than a 108 ampere hour which you have been using up to date, in that the plants are sufficiently big enough to take care of a larger size battery and by having a larger size battery you will get more efficiency out of the plant when charging the batteries. Also, the heavier battery will stand the discharge as well as charge the battery than a smaller battery.

As an example of which I refer to: You have in your smaller Generating unit a supply of 30 amperes when running at a maximum output. The present battery you have can only be charged at from eight to ten amperes. Therefore, you run your small plant at only one-third of its capacity to charge your present battery, but if you had a 240 ampere hour battery on it would be possible to run your plant closer to its maximum output and would charge the larger battery in the same period of time as it would the smaller battery, thus giving you in the larger battery, double the storage amperage. You will, no doubt, see from the above example that it is more profitable in this instance to install a larger battery even if the initial cost of installation is considerably higher.

We believe that if these instructions are carefully followed, you will eliminate considerable wear on your engines and cut your operating cost down considerably.

Yours very truly,

MUMFORD, MEDLAND, LIMITED .

Department of Indian Affairs,
Inspector's Office,
Regina, Sask.

Your File No. 312-11A C.E.

Gentlemen:-

In reply to your letter of the 22nd May.

Our Mr. Montgomery reported upon his return, making an estimate for the cost of checking and putting in proper working order your 6 and 3 K.W. LISTER Automatic Plants for the Gordon Anglican Indian Residential School at Punnichy. A copy is attached hereto.

In regard to batteries. The report reads as follows;-

"When replacing batteries we would strongly recommend that you replace your present set with a 240 amp. hr. set rather than the 108 amp. hr. size. The Plants are large enough to take care of the larger size battery, and by having this larger battery you will get more efficiency from the plant when operating the batteries. Also, the heavier battery will stand the discharge".

For your information we are quoting you on several sizes:-

GLOBELITE BATTERIES FOR LISTER PLANTS,
110 volt, 56 cells.

U7, 108 amp. hr. capacity, weight 470 lbs.
Price $465.00

W7, 120 amp. hr. capacity, weight 600 lbs.
Price.....$525.00

W9, 168 amp. hr. capacity, weight 690 lbs.
Price $582.00

- Cont'd. -

ALSO TO DATE OF THIS LETTER

DEPT. OF INDIAN AFFAIRS
JUN 4 1986
RECORDS

SCHOOLS
JUN 6 1935

Sir:-

I beg to acknowledge receipt of Departmental letter No. 121-1-5, dated April 9th last, with regard to the condition of the batteries and the Lister 6½ and 12 H.P. engines at the Gordon's Indian Residential School, Touchwood Agency.

The roads were very bad during the early part of April and I was not able to make the trip until the end of the month when I visited the school, taking with me the Shop Foreman of the Magneto Service Station of this City. In the meantime the Principal had had Mr. W. J. Montgomery, a mechanical expert of Mumford, Medland Limited, of Winnipeg, who handle the Lister electric lighting units, visit the school and examine the equipment. Mr. Montgomery submitted a detailed statement of the repairs required for the engine, but did not give an estimate of the labour. I wrote him requesting this information and his report came to hand during my absence this week at the Pelly Agency. I am enclosing his report, dated the 23rd May, giving the price of different sizes of batteries which he recommends be operated with this unit. I am also submitting a detailed report, dated April 16th, in connection with this plant.

It would appear to be the opinion of both Mr. Montgomery and Mr. Fanning that the batteries supplied in January, 1933, were too small to carry the load in connection with this unit. There are no extra attachments being used in connection with the batteries. The report of Mumford, Medland Limited submitted by their Agent Mr. Montgomery gives very full information regarding the condition of the plant and it is unnecessary for me to repeat what he says. I am of the opinion that it would be advisable to have this firm do the work. I have not been able to

- find any mechanics -

find any mechanics in this City who are familiar with the Lister Automatic unit.

With reference to your enquiry regarding the qualifications of the engineer in charge, I may say that I was not favorably impressed with him. I have made considerable enquiry in a quiet way. Before taking up the work at this school, this man was engaged for three years with the Regina Steam Laundry and from what I could gather he is quite a good steam engineer, but he has not shown and no one can tell me his experience in connection with electric lighting plants; and from the condition of his plant I would say that he is not qualified and inclined to be a careless operator. It is my opinion that he should be replaced.

Your obedient servant,

W. Murison

SCHOOLS BRANCH
JUN 12 1935

Memorandum: Schools Branch.

With reference to Mr. Murison's letter hereunder regarding the lighting plant at the Gordon's Indian Residential School, I would recommend that a new battery with capacity of 240 ampere hours be provided, also that the Mumford, Medland Ltd., who are Agents, I understand, for the Lister Company, be authorized to make the necessary repairs to the plant. I note Mr. Murison's remarks with reference to the man in charge of this equipment at the school, and unless he is competent to operate this equipment it would certainly be a source of expense to the Department.

MEMORANDUM:

The Honourable the Superintendent General,-

Mr. Inspector Murison, Regina, has furnished a report regarding the condition of the lighting plant at the Gordon's Indian Residential School (Gordon Reserve, No. 86 - Electoral District of Last Mountain). An expert of Mumford-Medland, Limited, Winnipeg, who handle the Lister electric lighting units in use at the school, examined the equipment and submitted a detailed statement of the repairs required for the engine and in regard to the batteries. He states the present batteries are now practically useless and that they will require to be renewed.

Mr. Orr, Architect of this Department, recommends that a new battery, with a capacity of 240 ampere hours, be supplied, and also that Mumford Medland, Limited, who are agents for the Lister Company, be authorized to make the necessary repairs to the plant.

The cost of supplying the batteries will be appreximately $750 and the repairs to the engine and dynamo, $265 - a total of, approximately, $1015. Funds can be provided in the Appropriation for Indian Education. I would request your authority for the expenditure and that Mumford Medland, Limited, Winnipeg, agents for the Lister Company, who supplied the present equipment, be authorized to make the necessary repairs to the plant. I shall be pleased to be advised, also, if the order for supplying the batteries, of the type mentioned above, may be placed with this firm or what other firms should be asked to quote.

Punnichy, Sask.
June 20th 1935.

DEPT OF INDIAN AFFAIRS
JUN 24 1935
RECORDS

Dear Sir;-

I have the honor to enclose report on visit made to the Gordon Indian Residential School. I am at this place frequently but do not report each visit, but I keep in touch with conditions there all the time. The Inspector is handling the water and electric light plant situations so I am merely mentioning them to show I know what is needed as I see it.

The water plant is giving quite a lot of trouble and it seems that the pump is not able to do the work. The Principal went to a lot of expense on this job before he located what the trouble really was.

The electric light plant requires a lot of repairs and a new set of batteries. Mr. Murison is getting all these I understand.

The water filter is giving trouble but the principal knows what is wrong and no doubt will attend to it.

The principal has kalsomined and painted the interior of the building from cellar to roof and is paying for material and labor. He asks the Department to allow him a grant of $125.00 to help pay for the material, he will pay all labor. The work would have cost much more than this and I told the principal he should have asked for the allotment before. However, if there are any funds on hand for this work I recommend he be compensated.

125 00

Mr. Frayling asks for linoleum covering for the sewing room, it is cement floor, the finish keeps wearing away and is dusty and uneven at present. The area is about 700 sq feet. He also requests that he be given a granary as there is none here, he asks for allotment of $250.00. He also asks for consideration of an amount of $50.00 to get material to make a flour warehouse inside the old hostel buildirg here. All these items are necessary if funds are available.

300.00
325 00

plus. cost of linoleum

The school has in a good garden and farm this year.

Your obedient servant,
Indian Agent.

11.

Ottawa, June 29, 1935.

Sir:

I have your letter of the 20th instant, reporting on a visit made to the Gordon Indian Residential School.

Regarding the Principal's request, that a granary be erected, at a cost of $250, I beg to refer you to your letter of April 14, 1934, enclosing a letter from the Principal, in which he requested that a galvanized bin, of medium size, be supplied. You also furnished a diagram of a portable corrugated granary, at a price of $115.00, f. o. b. Winnipeg. In view of this letter, the Department included, in the Estimates for the current fiscal year, the sum of $150, to purchase a granary of the type mentioned. You might advise if a portable corrugated granary would not be satisfactory for the needs of this school, or, if not, what other type of granary you would recommend.

The Department will approve of an expenditure, to an amount not exceeding $50.00, in the purchase of material to make a flour ware-house inside the old hostel building. It is understood the school authorities will perform the labour. Purchase should be made from a firm on the approved list and you should forward itemized accounts, in triplicate, properly certified, covering the cost.

Mr. Inspector Murison has submitted a report regarding the condition of the lighting plant and the need of new batteries, at a total estimated cost of $1,015. The supplying of the batteries and the repairs to the engine and dynamo are receiving attention. In view of the fact that this is an unforeseen expenditure, no funds were specially provided for the purpose. I regret, therefore, that it will not be possible to reimburse the Principal for the cost of the kalsomine and paint used in the redecorating of the interior of the school building. The only way this could be done would be to utilize the funds provided for the supplying of a granary. If the Principal would rather have the accounts paid for the cost of the kalsomine and paint than the providing of the granary, you may forward itemized accounts, in triplicate, properly receipted, attached to vouchers, in favour of the Principal - when payment will be made.

With reference to the linoleum requested, please have the Principal state the type and quality and, if possible, the approximate cost.

Your obedient servant,

A. F. MacKenzie,
Secretary.

Ottawa, July 4, 1935.

Sir:

I have your 312-11A C.E. of the first instant, regarding the condition of the batteries and engines of the lighting plant at the Gordon's Indian Residential School and enclosing quotations which you received for the supplying of new batteries and the overhauling of the engines.

In reply I have to say the Minister has directed that Mumford-Medland, Limited, of Winnipeg, be engaged to overhaul the engines, make the necessary repairs and place the plant in a good, serviceable condition.

With reference to the supplying of new batteries, the Minister directs that prices be obtained for the supplying of a new battery, with a capacity of 240 ampere hours, from the following:-

C&R 3736

Lorne Electric Company, Regina, Sask.
Magneto Service Station, "
Hall & Cameron Electric Co., "

Gillis & Warren, Winnipeg,
Northern Engineering & Development Co., Winnipeg,
D. Ackland & Son, Winnipeg,
✓ Mumford-Medland Company, Winnipeg, Man.

You may place the order with the firm considered by you to quote the lowest price for the supplying of the type of batteries which you believe most serviceable. If possible, an allowance should be obtained on the present old batteries. After the batteries have been installed, the engines overhauled and the lighting plant placed in good condition, you should forward accounts, in triplicate, properly certified, covering the cost. The Department will leave this matter in your hands, to obtain the above equipment, have the engines and plant overhauled and all the work completed at the lowest possible cost.

Your obedient servant,

A. F. MacKenzie,
Secretary.

JUL 16 1935

OR

Dear Sir;-

In answer to your letter #121-1-5 of June 29th last regards certain matters required for the Gordon Indian Residential School I beg to say I have taken these matters up with the principal.

Mr. Frayling would like to get the refund on the money spent for renovating the school, but he also wants the granary. I have been trying for quite a time to get a granary for this school and beg to recommend that the sum mentioned in your letter $150.00 be alloted and I will see that we get a granary, and if we cannot complete it with this sum at least the outside will be made weather proof, what I have in mind is something like we have on the reserves for farming instructors use.

Regards the linoleum. I took this matter up with the T.Eaton Co in Regina who handle work of this sort for institutions, they quote me as follows for the 67 yards required.

148.20

67 sq yds medium grade battleship linoleum at $2.10 per yard-----	140.70
6 gallon linoleum cement a7 1.25	7.50
Labor of experienced man to place the above	20.10
all f.o.b. Punnichy.----------Total	$168.30

no funds

I would be obliged if this can be supplied as the girls work in this large room and the place is laden with dust from the cement floor.

The Secretary,
Dept. of Indian Affairs

11A C.E.

Ottawa, July 20, 1935.

Sir:

I have your letter of the 10th instant, regarding the supplying of a granary for use at the Gordon's Indian Residential School.

In this connection I have to say that the sum of $150.00 is the full amount available for the purpose, and you may incur the expenditure. Should the cost exceed this amount, the school will have to be responsible for all costs in excess of the $150 provided.

E.R. No. 3519

I am enclosing an encumbrance certificate, authorizing the expenditure in the erection of the granary and also covering the amount authorized in official letter of June 29th, last, in the purchase of materials to make a flour ware-house inside the old hostel building. After the work has been completed, you should forward itemized accounts, in triplicate, covering the cost of the materials and for any outside labour that it may be necessary to employ. It is hoped, however, that the school authorities will be able to provide the greater part of the labour. When forwarding the vouchers for payment of the labour, you should state definitely the number of days or hours employed and the rate paid. Please state, on each copy of the voucher, that the expenditure was incurred under authority of E. R. No. 3519.

E.R. No. 3519

With reference to the supplying of the quantity of Battleship linoleum required, I regret that the Department will have no funds this year to pay for the cost of this material.

Encl.

Ottawa, August 3rd, 1935.

Sir,-

From information received by the Department, it is considered that the engineer at the Gordon's Indian Residential School has not sufficient experience to properly handle the electric lighting plant. If the lighting plant and the other mechanical equipment in a residential school are not in charge of a very competent person, trouble is caused the management and considerable expense is entailed both for the Department and the school.

Taking the above into consideration, I consider that it would be in the best interests of the Gordon's School to secure, at the earliest possible date, a new engineer who is capable of properly handling all the mechanical equipment in the school. I trust that you will cooperate with the Department in this regard.

Mr. Inspector Murison is being directed to visit the Gordon's School about the end of September with a view to interviewing the new engineer and reporting to the Department whether or not he is fully qualified for the very important work that is required of him.

Your obedient servant,

A. F. MacKenzie.
Secretary.

Ottawa, August 3rd, 1935.

Sir,-

With reference to the last paragraph of your 312-11A C.E. of June 1st, regarding the engineer at the Gordon's Indian Residential School, I enclose, for your information and guidance, a copy of official letter of today's date, addressed to the Principal of the Gordon's School.

Following your visit to this school, you should report to the Department regarding the engineer that has been engaged by the Principal.

Your obedient servant,

A. F. MacKenzie.
Secretary.

11A C.E.

Ottawa, August 8, 1935.

Sir:

I have your letter of the 25th instant, enclosing an account covering the cost of paint used for interior decoration at the Gordon's Indian Residential School, to the amount of $50.00, and requesting that payment be made, in place of the same amount allowed for the fitting up of a flour ware-house.

The account in favour of Nelson Newman, Punnichy, is being paid. It is to be understood that the Principal will pay for the cost of the flour ware-house repairs, in view of the Department paying the account for the paint, etc.

Your obedient servant,

T. R. L. MacInnes,
Acting Secretary.

A.F. MacKenzie, Esq.,
Secretary,
Department of Indian Affairs,
Ottawa, Ont.

Dear Sir,

Re: Engineer.

Replying to your letter of the 3rd. instant regarding the above. Mr. W.J. Warner, engineer, is now on holiday. I have had occasion to speak of his seeming indifference to his work and in June gave him a month to apply himself more thoroughly or tender his resignation, since which time there has been a great improvement.

I procured this man through the Saskatchewan Government department Steam Boilers and Industrial Inspection, and he holds First Class papers for Boiler and Electrical work. On his return to the school I will forward you his credentials that you might know it was on the face of apparent ability I engaged him. I might add that there is a great difficulty in obtaining an all-round, or what I term an institutional, engineer. I will obtain the best possible for the position, but apparently this can only be proven after actual work, not by written Provincial examinations.

I might add that but for one set of batteries there has been no expense to the Lister Engines and plant since installed until latterly,

and they have been in daily use since 1930. Taking this fact into consideration the cost now entailed is what might be expected, and that the present and previous batteries were not of the right capacity.

Mr. Warner commenced his duties here on July 12th. 1935. Mr. G.F. Angel, our previous engineer, suffered a stroke and left for England with the assurance that when recovered he would be reinstated. I regret to say this will not happen.

Yours truly,

Principal.

Re:WATER PUMP.

Dear Sir,-

The old and original pump was not the type for straight draft haul, it is a DEEP WELL type of pump. The one now here awaiting re-placement is a CENTRIFUGAL PUMP. I suppose it is the standard make for lake or such source of pumping, and is supplied by the same company. I think a guarantee should be given that this pump is capable of carrying the load demanded, for a reasonable length of time, which would then prevent criticism in the future regarding the School expenses and the Engineer.

Yours truly,

Principal.

Re: ENGINEER.

Dear Sir,-

Furthur as to my letter of the 6th inst.

On approaching Mr. Montgomery, expert of Mumford, Medland & Co. Winnipeg, who has recently installed new batteries etc. he says that Mr. Warner, our Engineer is a capable man and knows his work. (Warner assisted Montgomery with the installation and the overhauling of the Lister Engines.) Adding that having become accustomed to the duties here, knowing the machinery etc. and my having given him a good talk as to the cleanliness etc. etc. it might be well to give him furthur trial. Also that men are not easily obtained for the all round work called for in institutions such as this.

I am enclosing Mr. Warner's certificates for your inspection and will ask for the return of same with careful mailing.

I have gone into the matter thoroughly again with Mr. Warner and he rightly claims that were he not absolutely efficient he would not be granted the Diplomas issued by the Provincial Government, and has never had complaint from the Provincial Boiler Inspector who visits plants at least once every year, and he shows 19 years experience and that number of inspections. I consider that by retaining his services I shall not be jeapordizing the mechanical part of the School property.

Yours truly,

R. W. Frayling

-- COPY -- (Original on # 1-1-12.)

Ottawa, September 13, 1935.

Sir:

I have your 300-7 of the 3rd instant, concerning the purchase of storage batteries in Saskatchewan, and enclosing the quotations which you received for the supplying of batteries for use at the Muscowequan and Gordon's Indian Residential Schools.

In this connection I may say that your letter has been submitted to the Honourable the Minister, together with a copy of a communication which you received from Gillis & Warren Limited, Winnipeg, informing you that Bowman Brothers Limited, Regina, are the Willard Distributors for the Province of Saskatchewan and that their territory is Manitoba and western Ontario only.

As requested, I am returning herewith the quotations which you received for the supplying of batteries for the two above named schools. I would request, if the batteries have been supplied and the work in overhauling the plant completed, that you forward an account, in triplicate, properly certified, covering the expenditure for each of the schools separately, to which should be attached the quotations which you received for the supplying of the batteries.

Your obedient servant,

Dear Sirs:-

With reference to your letter of the 3rd instant, re a deduction of $1.00 from your Invoice # 350772, please note that item # 10 on this Invoice was listed as follows:-

4 No. 5536 Valves at $2.25 - $10.00

This would properly amount to $9.00, and for this reason, this invoice was paid at $261.70 instead of $262.70.

Yours faithfully,

N.C. Allen.
Representative of the Treasury.

I.A.C.E.

Dear Sir;-

I beg to inform the Department that the water intake pipe at Gordon School requires more covering to protect it from frost, the water in the lake keeps going down. The Department must be about fed up hearing about this water system, but it is the only available supply and it must be protected.

I require about $40.00 to put in crib work on both sides for about fifteen feet out into the lake, then filling the space with earth, and would be obliged if the Department could grant this sum.

Your obedient servant,

Indian Agent.

November 18th, 1935.

Dear Sirs:-

I beg to call your attention to your Invoice No. 351543 dated August 13th,1935 amounting to $577.58 for 1 W13, 13 plate 252 ampere hour battery purchased for Gordon's Anglican Indian Residential School at Punnichy, Saskatchewan and paid for by part Cheque No. 19350 dated September 26th, 1935 for $894.43.

B. 13

You will note that the price of this battery was $787.50 less $42.00 allowance on old battery less discount of 20-5% which amounts to $566.58 while $577.58 was charged. This makes an overpayment of $11.00.

Will you kindly let us have a refund of this amount.

Your prompt attention will be appreciated.

Yours faithfully,

N.C. Allen.

Representative of the Treasury
Department of Indian Affairs,
OTTAWA, Ont.

Dear Sir:-

We acknowledge your letter of November 18th in connection with our invoice to you No. 351543 of August 13th last.

We are attaching a copy of this invoice correctly typed. The battery should have been shown as $566.58 and the prepaid freight as $11.00, making a total of $577.58. If you will refer to our quotation of June 23rd, you will find that we quoted you this amount for the freight and although we had to pay considerably more than this, we charged you with $11.00 only, as per our quotation.

Yours very truly,

MUMFORD, MEDLAND, LIMITED,

Dear Sirs:-

We are in receipt of your letter of the 21st instant, re your Invoice No. 351543. We have to advise you that this Invoice was made up as follows:-

1 W 13 13 Plate 252 ampere hour Battery	$787.50
Allowance for old Battery	42.00
	$745.50
Less Disc. 20.5% ----	$577.58
This properly figures to	$566.58

Our Cheque No. 19350 amounting to $894.43 also included your Invoice No. 351551 freight on storage battery to Punnichy $44.15. If you were including an item of $11.00 for freight on Invoice No. 351543 will you please advise us why we were also billed for freight amounting to $44.15. We would appreciate your prompt attention in this matter.

Yours faithfully.

N.C. Allen.
Representative of the Treasury.

INDIAN AFFAIRS

December 23rd, 1935

Representative of the Treasury,
Department of Indian Affairs,
OTTAWA.

Dear Sir:- File No. 121-1-5

We regret that in our letter of November 21st we did not look into the freight question thoroughly before replying or we would have found that your claim for a refund of $11.00 was quite in order.

Our original sales sheet was made up for the battery including freight but an error was made in using the weight column for a 32 volt battery, whereas the one shipped was 110 volt. The Battery Company made a mistake and did not make this shipment prepaid. Consequently we wrote to Mr. Murison and asked that the freight be paid on arrival and charged back to us. Later, through the original shippers we were able to have the freight charges reversed and sent to us at Winnipeg and it was only upon receipt of the expense bill for $44.50 that we discovered our original error in the weight and you were billed with this amount without any reference to the original invoice.

We are, therefore, enclosing our cheque for $11.00 and trust you will find this in order.

Yours very truly,

MUMFORD, MEDLAND, LIMITED,

DEPARTMENT OF INDIAN AFFAIRS
CANADA

OFFICE OF
INDIAN AGENT
Touchwood Agency,
Punnichy, Sask.
Feb 22nd 1936.

DEPT. OF INDIAN AFFAIRS
FEB 25 1936
RECORDS

XIA C.E.

The Secretary,
Department of Indian Affairs,
Ottawa.

Dear Sir;- I have the honor to report that quite a lot of equipment at Gordon Indian Residential School requires attention, the main trouble is caused by the water containing minerals which have eated out the various parts of the plant, as well as filling others with hard sediment.

1. Some sections of the radiators are eated out and leaking badly, this matter can be left over at present as they will last out the winter.

2. The water distribution system requires the following.
3 doz pair nickel compression taps for basins.
1 doz nickel compression taps for baths- hot & cold combined
2 doz 5 inch copper toilet floats.
2 doz brass toilet float rods 12".

3. Boiler requires one ¾ inch straight away valve on bottom of water column and one 1½ inch blow down valve for back of low pressure boiler.

4. Kitchen ranges require. Two complete tops for McClary Army Ranges, they are burnt out. (General Steel Wares).

5. Pipes for cooling Lister plant are filled up with sediment which cannot be removed and this fills up the tops of water jackets in the plant and causes a lot of expense each year. New pipes should be supplied for this part of the plant. (Medland Mumford, Winnipeg, Man).

6. The filter here is made by International Filter Co of Chicago. The sand inside the filter requires changing, I understand it is quite a costly matter, however, you have probably the same plant elsewhere and may know more about it. In any case the refil should be supplied. The engineer says it is a job for an expert of the agent of the company to make this change.

7. The back of fire box on low pressure boiler is burnt out, the engineer says he could fix this if he is supplied with 300 lbs of fire proof cement called Plibrico, if you consider this correct it should be supplied, I never used it myself, the engineer is quite competent and says this is the right material. He says it might cost about $25.00. If this is not supplied you would have to get fire brick to make fire wall in Leonard low pressure boiler.

8. The upright boiler used for laundry etc requires retubing again, it will have to be taken to Regina when roads open up. This is another job that only lasts a year and a half with the water we have here. It is being plugged up in various spots now and is dangerous.

9. The jacket heater which was supplied a couple of years ago has corrpded up again, this boiler supplies the hot water used throughout the whole building. It is now--- over

Indian Affairs. (RG 10, Volume 6311, file 654-5, part 8)

POOR COPY

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

Library and Archives Canada / Bibliothèque et Archives Canada
www.collectionscanada.gc.ca

It is now plugged up from the outside with an iron plate held on with pressure clamp and will not last much longer, the pressure to supply the water throughout the place must be about 50 lbs. This jacket heater does not appear to be suitable, I enclose circular from the Leonard people of what they think should be used. Something will have to be supplied in immediate future and you might consider using the sort described. If so the measurements given on the plan would be required.

I beg to recommend that all the above be given consideration as soon as possible.

Your obedient servant,

Indian Agent.

Dear Sir,-

Replying to your letter of the 22nd ultimo, with regard to the repairs required to the plumbing and heating systems at the Gordon's Indian Residential School, I would ask you to kindly arrange with E. H. Carter, of the Yorkton Plumbing and Heating Co., Yorkton, Sask. to submit through your office an estimate of the cost of what is required to carry out the repairs and replacements necessary. This estimate should be in detail in order that the Department can authorize either all or a portion of the reppirs required. Funds are available for some of the work, provided an estimate is submitted immediately, as whatever work is authorized will have to be completed before March 31st.

Yours very truly,

A. F. MacKenzie.

equipment for the water distribution system:-

3 dozen pairs nickle compression taps for basins.
1 " nickle compression taps for baths.
2 " 5" copper toilet floats.
2 " brass toilet float rods, 12"

3. You may supply one ¾" straight away valve for bottom of water column of boiler and one 1½" blow-down valve for back of low pressure boiler.

4. Purchase two complete tops for McClary Army ranges.

5. and

6. Regarding the new pipes required for the Lister plant and the repairs to the water filter, I would request that you advise the Department regarding the approximate cost of placing this equipment in a satisfactory condition. In this connection you should state if you consider the Engineer at the school is competent to handle this equipment. The frequent requests for repairs lead the Department to question whether the whole trouble in connection with this equipment is due to the water or if it is being properly attended to by the Engineer.

7. You may arrange for the purchase of 300 lbs. fireproof cement to repair the back of the firebox on the low pressure boiler. It is noted the cost will be approximately $25.00.

8. With reference to re-tubing the upright boiler used for laundry purposes, I would request that you will advise the approximate cost in having it taken to Regina and re-tubed.

If possible to have any of the above authorized supplies purchased and accounts, covering the cost, dated previous to the end of the present month, properly certified by you and forwarded to reach the Department by the middle of April, next, payment could be made from the current year's Appropriation. However, if this is not possible, the funds will have to be proveded from the coming year's Appropriation. It is expected the school authorities will be responsible for installing the equipment in the water distribution system, the boiler and the kitchen range.

Yours truly,

A. F. MacKenzie,
Secretary.

Indian Affairs. (RG 10, Volume 6311, file 654-5, part 8)

H X D.

Ottawa, March 21, 1936.

Dear Sir:

Replying to your letter of February 22nd, last, and your telegram of the 20th instant, regarding the various equipment requiring attention at the Gordon's Indian Residential School, caused by the water containing minerals, which have eaten out the various parts of the plant and filled others with hard sediment, I would say as follows:-

With reference to the supplying and installing of a new jacket heater, you are being sent, in this connection, the following night lettergram of today's date:-

"Have E. H. Carter Plumbing and Heating Company, Yorkton, supply and install new jacket heater, Gordon's School, price quoted, your telegram. Heater supplied and account dated previous to thirty-first instant."

As funds for this purpose are available in our Appropriation for the current fiscal year, it is desired that the heater be supplied and, if possible, installed, and the account, in triplicate, covering the cost, dated previous to the end of the present month, in order that payment can be made before our books close for the current fiscal year. It is hoped that you will be able to arrange to have this work completed by the date mentioned.

Regarding the other equipment required, as mentioned in your letter above referred to, I would state as follows:-

1. Please advise, later, regarding renewing the sections of the radiators eaten out and leaking. It is noted that these will have to be renewed before next winter. You should furnish an estimate of the cost.

2. You may arrange for the purchase of the following

J. W. Waddy, Esq.,
Indian Agent,
Punnichy, Sask.

re File No. 121--1--5F. (Page 3 cont'd.)

No. 9. Radiator repairs.

100 ft. Wall radiation
6 Webster sylphon radiator valves supplied and installed for $114.45 (One Hundred and Fourteen Dollars and Forty-Five Cents.

The prices given under the different numbers you will note include the cost of installation. These costs are equalized between the various items according to the time estimated necessary for each piece of work and also travelling expenses are charged over the various items, so that the job will be completed as a whole.

We thank you for this inquiry and hope to be favored with this work. Any other information that you may require we will be glad to give it.

Yours truly,

EHC/MC.

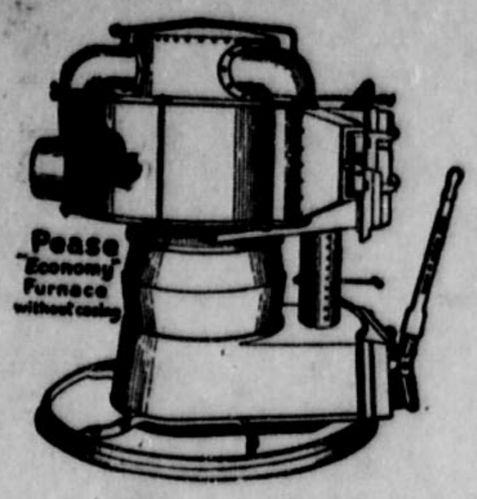

E. H. Carter.

PLUMBING -:- HEATING -:- TINSMITHING

CORNICE, EAVESTROUGHING, STEEL CEILINGS, SKYLIGHTS, TANKS

ESTIMATES FURNISHED ON ALL LINES ON APPLICATION

YORKTON, SASK., March 21 1936

re File No. 121--1--5F. (Page 2 cont'd.)

No. 3. Re Heating Boiler.

I propose building a new fire wall in the above boiler with A.P. Green Fire Co. Clay Products, which is highly recommended for this kind of work, and will outlive firebrick, for the sum of $115.50 (One Hundred and Fifteen Dollars and Fifty Cents).

If firebrick is preferred instead of the above, this will cost $89.50 (Eighty-Nine Dollars and Fifty Cents).

No. 4. Re Water Filter.

I had to write to Toronto for information regarding this; also as to cost of repairs etc., but to date have no reply so will report later on this.

No. 5. New Circulating pipes for Electric Plant.

The cost of replacing the pipes, elbows, tees, valve etc. on the Lister Electric Plant cooling system will be,--

With iron body valve.....$35.00.
With iron brass valve..... 39.50.

No. 6. Re Kitchen Range repairs.

The quotation on this item have not come to hand yet, so will report later.

No. 7. 1---1" gate valve.....$2.50.
1---1¼" " ".....3.00.

No. 8. 3 dozen nickle plated basin faucets
1 " " " bath "
2 " Toilet tank ball cocks.
6 sets Toilet seat hinges.
1 pair self-closing basin faucets.

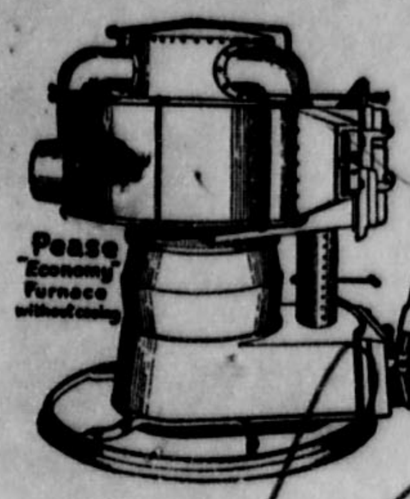

The cost of this material installed.....$320.25(Three Hundred and Twenty-Dollars and Twenty-Five Cents).

DEPT. OF INDIAN AFFAIRS
MAR 24 1936
RECORDS

YORKTON, SASK., March 21 1936

The Secretary of Indians Affairs,
Ottawa, Canada.

re.File No. 121--1--5F.

Dear Sir:-

At the request of Mr. J. W. Waddy, Agent of Indian Affairs at Punnichy, I went over to the Gordon Indian Residential School and looked over the various plumbing and heating requirements. The list of these requirements is as follows,--

No. 1. Jacket Heater.

Since being at the school the jacket heater has gone out of commission entirely, so have wired you as follows,--
(Jacket heater out of commission. No hot water. Price of new unit complete same as old one, installed $175.00. Other estimates following by mail. This is urgent. Please wire instructions to E.H. Carter, Yorkton.)

In reference to the steel tubeless heater as mentioned in No. 1. I may say this is not readily obtainable, and owing to the urgency of the situation, I quoted you as above, for the same size and make of heater.

I received a quotation on a horizontal five-tube boiler which has given good service at different points. The cost of this boiler installed at Gordon School would be $305.00. This boiler has a 35% greater heating capacity than the B.32 heater now in use.

In dealing further with the hot water supply system, I would like to point out that the storage capacity of 250 gallons is on the small side for a population of approximately 140 persons. However, I am just pointing this out for your information, which may be dealt with at some future date.

No. 2. Retubing vertical boiler.

I propose retubing this at the School and the job complete will be $82.50 (EightyTwo Dollars and fifty cents).

EX'D.

Ottawa, March 30, 1936.

Dear Sir:

The Department is in receipt of your letter of the 21st instant, with reference to certain replacements which you consider should be made at the Gordon's Indian Residential School.

Through the office of Mr. Agent Waddy an order has already been placed with you to install a new jacket heater.

You should submit quotations for the other repairs to Mr. Waddy, and he will report to the Department. For your information, I may say that our regular procedure is to deal through the office of the local Indian Agent. When his reply is received, we will decide whether or not funds can be made available for additional repairs. You will understand that only a limited amount is available for repairs at each of our residential schools, and, consequently, it is not always possible to authorize all the repairs that might be considered advisable.

Yours truly,

T. R. L. MacInnes,
Acting Secretary.

Dear Mr. Waddy,-

The enclosed bill from the North American Lumber Co. is for goods required for finishing the Dam at the Lake.

The Lake dropped considerably last year and in the Fall, weather prevented the completion. There is every indication of a quantity of water this spring and I will guarantee a completed satisfactory job; though it will cost well above the estimate given,viz: $200.00 by Mr. Harding, Surveyor.

Yours truly,

Principal.
Gordon's School.

11A C.E.

R

Dear Sir;-

In answer to part of your letter 121-1-5 of March 21st last regarding repairs at Gordon Indian Residential School I beg to report as follows.

35.00
8 2.50
11 5.50
233.00

The cost of replacing the pipes etc on cooling system of Lister Plant will be $35.00 if done by E.H.Carter.

The cost of taking the boiler to Regina to be retubed would be about $70.00 for the work, last time it cost this sum. The cost of truck service or freight would be about $20.00 for return trip, extra to above. E.H.Carter has offered to send a man here to do this job for $82.50.

Regards the firewall in the heating boiler the plumber says that $25.00 would be useless, that it would cost $115.50 for job done with best material, and if fire brick alone was used it would cost $89.50.

Practically estimate
Cost available
but will be required
in Estimates

No funds.

Your remarks to note #6 about the trouble perhaps being due to the engineer are noted; however, when even the taps all corrode up you cannot blame the engineer. I have plenty of samples of the sediment. It would appear that a water softener of some sort should be installed here, if it is not put in all the pipes in the walls of the building will soon be plugged and the cost of installing new pipes throughout the building will run into thousands.

Your obedient servant,

Waddy

EXD.

Ottawa, April 8, 1936.

Dear Sir:

The Department is in receipt of your letter of the 2nd instant, with reference to certain repairs required at the Gordon's Indian Residential School. You might arrange for the following:-

Replacing the pipes on the cooling system of the Lister plant - - -	$35.00
Repairing boiler - - - -	82.50
Repairing firewall and heating boiler -	115.50

The above items, amounting to $233.00, practically exhaust the amount available in the current year's Estimates for improvements and repairs at the Gordon's Indian Residential School. The small balance that we have appropriated for this purpose at that school will be retained, in the event of any emergency occurring between now and March 31st, next.

Regarding the last paragraph of your letter, the Department will have no funds for the purchase of a water softener this year.

Mr. E. H. Carter, Yorkton, Sask., should be engaged to do the repairs authorized in this letter.

Yours truly,

A. F. MacKenzie,
Secretary.

Dear Sir,-

Re: PRINCIPAL'S COTTAGE.

Somewhile ago I took up the matter of inside re-decoration of our cottage.

The last time it was papered and painted inside was December 1930 OR January 1931, so the cost of upkeep has not been excessive, but it now sadly needs renovation.

I trust that this will be approved and started with as little delay as possible.

Yours truly,

Principal.
Gordon's School.

The cost for above would be about $150.00.

Dear Mr. Waddy,-

Re: ROOT HOUSE.

You will remember me taking up the matter of re-building the above. The roof keeps falling and has had to be shored up at different times all winter, until it's becoming difficult and dangerous to work in.

The proper and lasting building should be Cement Walls, Roof etc. and would cost about $350.00 but we could go about 6 feet furthur into the hill and by using cement and lumber at a cost of about $200.00.

This is an absolute necessity and should be commenced in the very near future as an accident might happen at any time.

Trusting this will be put in hand without furthur delay,

Yours sincerely,

J. W. Frayling

Dear Sir;-

Re letter 121-1-5 of March 21st last sixth paragraph, item L, regarde renewal of radiators at Gordon Indian Residential School, I beg to say that the leaking radiators will require replacing soon. At the time Mr. Carter gave me an estimate before on this work the cost was estimated as $114.45, but there is some more required than he noted then, and the present cost of replacement would amount to aboht $125.00.

Some of the radiator sections have been removed already as they were in such bad shape and will have to be replaced before cold weather arrives.

Will you kindly authorise this work if possible.

Your obedient servant,

Indian Agent.

121-1-5.

EX'D.

Ottawa, September 15, 1936.

Dear Sir:

The Department is in receipt of your telegram of the 11th instant, with reference to the cost of renewing the radiator valves at the Gordon Indian Residential School.

In your letter of August 19th, you stated that the cost of the necessary work was first estimated at $114.45 but that, as more was required, the replacement cost would be approximately $125.00, which amount was authorized in official letter of the 25th ultimo.

Your present telegram states that the cost will be $200,00, or, in other words, the estimate has been increased twice.

As previously pointed out, the funds provided for repairs at this school in the current year's appropriation have already been exceeded. The Department wishes to have the heating plant at the Gordon School in as good condition as possible, but unnecessary expenditure must be avoided. If you consider that the price now submitted by E. H. Carter Plumbing and Heating Company is reasonable and that the work on which they have estimated is absolutely necessary, you may authorize them to proceed, at a cost not exceeding $200.00; but, if you believe that a less amount of work would be sufficient at the present time, you should effect any saving possible.

Yours truly,

A. F. MacKenzie,
Secretary.

Dear Sir;-

I have the honor to report that the principals of the Gordon and Muscowequan Indian Residential Schools have asked me if it is possible for the Department to consider appointments at these schools of watchmen such as are allowed other schools in Saskatchewan. They both say that they have to keep men on duty practically all night and they pay them out of their own funds from school grants, and it appears that other schools have the wages paid by the Department.

Will you kindly advise me about this matter.

Ottawa, November 23, 1936.

Dear Sir:

With reference to your letter of the 19th instant, the Department only allows grant for a night watchman's services at those schools whose construction is considered a fire hazard.

At reasonably modern buildings like Gordon's and Muscowequan, the Department does not allow any grant for a night watchman's services.

Yours truly,

A. F. MacKenzie,
Secretary.

Dear Sir;-

I have the honor to report that on Sunday, the 6th inst, a fire occured at the Gordon Indian Residential School and destroyed a garage there, the property of the Department.

The garage was lumber shed, about 14x30 eight foot walls, valued about $350.00 I judge.

The contents were two cars, cutter, jumper, scales and four driving robes property of school and employees.

Fire is presumed to have started from a coal stove, it was discovered about 10.30 A.M. Other buildings alongside the garage were saved by use of the hose and water system.

INSPECTOR'S OFFICE,

REGINA, SASK. 11th January, 1937.

Dear Sir:-

I am advised by Indian Agent Waddy that the cooling tanks of the Lister lighting plant at the Gordon's Indian Residential School, Punnichy, are leaking badly and require replacing.

I am enclosing a sketch of these prepared by the Principal, Mr. Frayling, and I shall be glad to know if these form part of the regular equipment of Lister plants. If so, what would be the cost F.O.B. Punnichy? Could the school staff install these or would it be necessary for you to send a man to install them and what would be the cost of installation? If they do not form part of Lister equipment, where do we obtain them?

I am forwarding a copy of this letter to the Secretary, Department of Indian Affairs, Ottawa, and shall be glad if you will reply direct to the Secretary, forwarding me a copy of your letter.

Yours truly,

Thos. Robertson,

Re: LISTER ENGINE WATER COOLING TANKS.

Dear Mr. Waddy,-

The attached sketch explains itself. These twin tanks have shown slight leakage for some time, and cement and etc. has been used to stop it. Now the leakage has started in several places and makes the replacement imperative, with as little delay as possible. If leakage became rapid it would seriously impair the Lister Engines and put our Light and Power entirely out of commission.

Your kind and prompt attention will be esteemed.

Yours truly,

Principal.

Dear Sir;-

I have the honor to report that the principal of the Gordon Indian Residential School reports that the cooling tanks of the Lister lighting plant at that place require replacing as they are leaking badly, the water at that place eats out the metal equipment. Mr. Frayling asks that new tanks be supplied as soon as possible.

The principal does not know if these tanks are regular equipment of Lister plant or if they were special tanks made for this place, he encloses sketch, there are two tanks.

Medland & Mumford, Winnipeg, Man., are agents of the Lister people.

If the Department approves of purchase of the tanks they can be shipped to Punnichy, Sask.

Your obedient servant,

Indian Agent.

TOUCHWOOD AGENCY
FEB 20 1937
Punnichy, Sask.

Dear Sir,-

Stated below are immediate needs for the 2 Lister Engines in the Power Plant. The cost will run into the figures of $75.00 to $85.00. They can only be obtained from Mumford - Medland Ltd. Winnipeg, Lister Agents for Western Canada.

12 Cylinder Head Studs
12 Connecting Rod Shims
12 Valve Spring Pins
12 Nuts for S 62 Tappet
12 Exhaust Valves
4 Carbon Contacts over 47 Amps.
6 Cylinder Head Joints
12 Valve Spring Carriers
12 Tappet Adjusting Screws
12 Intake Valves
6 Copper Blowout Fingers
2 Blowout Coils over 47 Amps.

Our own Engineer can take out the old and replace the new parts and so save this extra cost, which would be high from Winnipeg. Your immediate approval for this order will be esteemed.

Yours truly,
W. Frayling

EX'D.

Ottawa, February 26, 1937.

Dear Sir,-

I have your letter of the 22nd instant, enclosing a communication from the Principal of the Gordon's Indian Residential School, in which he requests that certain equipment, as enumerated by him, be supplied in order to carry out necessary repairs to the Lister engines in the power plant.

In reply I have to say that the Department will approve of an expenditure of, approximately, $80.00, in the purchase of the equipment as mentioned in the Principal's letter. You should obtain an itemized account, in triplicate, covering the cost, which you should attach to proper voucher forms, certify in the usual manner and forward for payment.

It is to be understood that the engineer of the school will be responsible for the replacing of the new parts in the engines, without expense to the Department.

Dear Sir,-

Re: EXTERIOR OF SCHOOL BUILDING.

This Building was erected in 1929 and has never had a nickle spent on it yet. It is settling down, many parts of the Brick in the facing have become loose and misplaced and should be renovated. If repaired now the cost would not be much, if not done now it might be considerable. The Window Frames need painting very badly, and it would preserve the life of the wood and add to the general appearnce of the School.

The interior is in good shape and as usual will have its fresh coat of Kalsomime and Paint in the near future, which is paid for out of the Per Capita Grant.

Yours truly,

J. W. Frayling

Principal.
Gordon's School.

Ask Pantry?

Dear Sir,-

Re; SEWING ROOM FLOOR.

The floor of the above mentioned room is in very bad shape and needs attention.

Two years ago you obtained an estimate from T. Eaton Co. Regina for a covering of same with Battleship Linoleum (which other floors are covered with) but it was put back for lack of funds. Last year the same excuse I think.

Is there any chance of it being passed this year?

Yours truly,

Principal.

Dear Sir,-

Re: GARAGE.

You will remember my reporting the Garage being destroyed by fire, it is necessary that a new building should be erected with as little delay as possible, and I am giving a rough estimate as to the amount of Lumber etc. required, with a suggested figure for labor. This is for a Building 10 feet shorter than the old one.

6,000 shingles	2,000 feet Ship Lap
1,200 feet Siding	5 rolls Tar Paper
15 Bags Cement	Nails and Hardware $15.00
110 2 x 4's 12'	

This would cost around $350.00 I would think. Labor Gravel, extras etc. about $100.00. This could be built by ourselves with Indian labor for a sum not exceeding this amount I think, may be a little less or more.

Yours truly,

Principal.
Gordon's School.

11A C.E.

Dear Sir;-

I enclose four letters from the principal at the Gordon Indian Residential School asking for the following appropriations.

1. Garage for use of school car---------- $450.00.
Last fall a fire took place at this school and burnt up our garage and two school cars. The principal says he requires more storage room at the school, he used part of the other garage for storage. He says he will build a store house from school funds if the Department will authprise the $450.00 he wants for a garage. As the fire took place after the estimates went in for this year no funds were asked for this purpose. It was no fault of construction of of anyone but the school staff that the fire occured, they put a coal stove in the garage and next time they visited the place the stove had got in its work first. They were looking for trouble in my opinion. I am not recommending this expenditure but can say the school needs a garage.

2.Renovation of principal's cottage---------- $100.00.
When I get funds for renovating houses of the employees here we are quite satisfied if we get $50.00, we usually get $10.00 each annually, but as this place has not got the annual treatment I would be obliged if you would consider giving authority to spend up to $50.00. If so would it be suitable to get wall paper and other material from T.Eaton Co., Regina.

3.Battleship linoleum for sewing room floor. The cement here is all gone dusty from poor material in construction, it should be covered. See my letter 11A.C.E. July 10 1935 on this subject. The cost would be about $170.00. I got my figures at that time from T.Eaton Co. Regina who handle a lot of this sort of work. I recommend that it be supplied for sake of health of the pupils.

4. When I visited the school yesterday I checked up on this request which is for renovation of the putside of the school. Five places require a lot of brick replacement, at doors and windows. All outside window casings need paint.

over.

Indian Affairs. (RG 10, Volume 6311, file 654-5, part 8)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

POOR COPY

Library and Archives Canada / Bibliothèque et Archives Canada
www.collectionscanada.gc.ca

It is hard to figure cost of the work until I know how extensive a job the brick work is, we have to dig in and find out. I would think that the labor and mortar etc would amount to about---------- $20.00
The painting of casings etc would amount to 100.00
The principal mentions inside decorations. Every year he has kalsomined the inside of the place from top to bottom out of material he bought from school funds. I think he should be allowed $100.00 of material, this is the first time in six years he has asked for anything in this line.

Your obedient servant,

J.P. Brady

Ottawa, April 21, 1937.

Dear Sir,-

The Department is in receipt of your letter of the 14th instant, with reference to requests received from the Principal of the Gordon's Indian Residential School.

In view of the information contained in your letter, the Department is not prepared to consider authorizing the expenditure that would be required for the erection of a new garage.

With reference to supplying linoleum for the sewing room floor, would it not be possible to paint the floor with cement floor paint? You might let me have an estimate of the cost of improving the floors in this manner.

The other requests mentioned in your letter are receiving consideration and you will be advised later regarding our decision.

Yours truly,

D. A. Hoey.

April 24, 1937.

MEMORANDUM:

Mr. Dudley.

I wish to direct your attention to official letter of the 14th instant from Indian Agent Waddy, with reference to the Gordon's Indian Residential School.

In the appropriation for the fiscal year 1937-38, the sum of $700 was provided for redecorating the Principal's residence and general repairs at the Gordon's School. With regard to the recent request from the Indian Agent, I recommend that the following work be authorized:-

(1) Expenditure of $50.00 for renovation of Principal's residence.

(2) Expenditure of $20.00 for repairing the brickwork.

(3) Expenditure of $100.00 for painting the window casings.

The Agent is being written with a view to ascertaining if it would be possible to paint the floors with cement paint rather than placing linoleum on the floors.

In view of the information contained in the Agent's letter, I do not consider it advisable to authorize the erection of a new garage.

Chief, Training Division.

RECORDS

Dear Sir;-

In answer to letter 121-1-5 of April 21st regards repairs to Gordon Indian Residential School I beg to say that there would be no use putting paint on the floor in the sewing room, the cement is sandy, has no body to hold paint.

If you cannot approve of the linoleum it might be possible to have a new cement floor put on over the old floor, paint would be just waste of money on this special job, though I know it is suitable in many cases as I have used it many times. A new cement floor would cost more than the linoleum and probably would last longer, I favor the linoleum myself but will put in anything you suggest, however, something has to be done or else shut up the room and use it for storage, the dust there now makes it unhealthy for the pupils.

Gordon's Anglican Indian Residential School

Punnichy, Saskatchewan

PRINCIPAL
R. W. FRAYLING

PUNNICHY, SASK. June 22 193 7.

J. W. Waddy, Esq.
Indian Agent,
Touchwood Agency
Punnichy, Sask..

Dear Sir,-

Will you please order ONE Jacket Heater. The one that was in use cracked this morning. This Heater gives the School hot water for the whole building; is in use every day of the year, and the most needed of any used here.

The old one reads as follows:
Bungalow Heater. Dominion Radiator & Boiler Co. Toronto.
Triumph No. 32.

There is a small plate attached to the Door - No. B 27661

Our Engineer says that if a Steel Boiler replaced this cheaper make it would last for years, whereas the life of those at present installed is only from 12 to 18 months.

Your prompt attention to this will be much esteemed.

Yours truly,

TOUCHWOOD AGENCY

11A. C.E.

Dear Sir;-

I have the honor to report that the jacket heater at the Gordon Indian Residential School has cracked open and should be replaced.

This heater was supplied in March 1936 as per your letter 121-1-5 March 21st 1936. (Dept)

My letter #11A C.E. of Feb22nd 1936 paragraph 9 explained that I did not think this type of heater suitable, so many of this type had burst open, due to corrosion from the mineral salts in the water. I am still of the same opinion, that this type of heater is unsuitable, for this school.

I would be obliged if the Department will authorise supply of another boiler.

Your obedient servant,

Indian Agent.

Regina, June 28th, 1937.

R

Dear Sir;-

I beg to submit attached letters from Mr. Waddy re heater Gordon Indian Residential School.

Mr. Waddy informs me that this heater was supplied in March, 1936, contrary to his recommendation, as similiar boilers had failed due to water conditions and there being no eay of cleaning them out. He recommends replacing this boiler with an all steel one as manufactured by The Leonard people and states that in addition to being all steel it has a clean out.

In view of these facts and the fact that the engineer at the school is quite competent to install the heater, I would recommend that an all steel hearer be supplied, that it be bought wholesale and that the school engineer instal it.

In support of this I might point out that the present heater is similiar to Trumpet Mogul No. H.32 in J.H.Ashdown's catalogue price $95.00, whereas the Department paid the local plumber some $175.00 for boiler and installation.

Yours truly,

Thos. Robertson,
Inspector of Indian Agencies,

Dear Sir:

The Department is in receipt of your letter of the 22nd ultimo, with reference to the jacket heater at the Gordon's Indian Residential School.

Please let me have full particulars regarding the steel heater which you recommend be secured from E. Leonard & Son Limited. You should also state the approximate cost of this heater.

A copy of this letter is being sent to Dr. Thos. Robertson, Inspector of Indian Agencies, Regina, Sask.

Yours truly,

EX'D.

Ottawa, July 14th, 1937.

Dear Sir,-

The Department is in receipt of your letter of the 9th instant, with reference to the jacket heater required for the Gordon's Indian Residential School.

In your letter of February 22nd, 1936, you enclosed the attached circular from E. Leonard & Sons, Limited. You will note that there is a considerable amount of writing on this circular but neither the circular nor your letter states the horse-power required. The table at the bottom of this circular shows that the firm can supply boilers of seven (7) different horse-power.

Before considering this matter further, it will be necessary for you to state definitely the horse-power required. You should, also, advise the approximate cost of the boiler which you consider should be ordered.

When replying, you should return the circular enclosed.

Yours truly,

R. A. Hoey.
Supt. of Welfare & Training.

...ANTEE AND COVERINGS

IDEAL and SAFFORD Boilers are guaranteed only to extent of furnishing new castings by freight for any found de tive in manufacture. On account of the varying conditions rounding their installation, we do not guarantee our Boilers otl wise.

Both on account of increased eff... and greater econor we recommend that all Boilers be thoro... protected by a su stantial covering of asbestos.

INFORMATION REQUIRED FOR ORDERING BOILERS AND BOILER REPAIRS

State plainly the catalogue, name, number and rated capa city of Boiler required; also number of square feet of Direct an if any, Direct-Indirect or Hot Blast Radiation, that Boiler is t take care of.

When ordering repair parts for any of the Boilers listed i this catalogue, or for that matter for any other boiler, first give th size, number and catalogue name, or name on front of the Boile Next give the factory or serial number. This is usually found o the little brass plate on one of the front doors. It is well to men tion all letters or numbers in order in which they appear on part required. In case it is impossible to give any of the above require- ments, send a sketch having dimensions marked on it, and a detail- ed description of part wanted. It will also be well to mention year number where same appears on front of Boiler, and if pos- sible, the year in which the Boiler was installed, or better still, the date and number of the invoice pertaining to it. Especially men- tion whether the boiler is Round or Square. Where Round, if it is a grate bar that is required, mention which one, numbering from the front, and whether it has a lug or hook on it. If it is a door or door-frame, especially mention which one.

Where section is required for a Sectional Boiler, mention which one, numbering from the front, and whether same has any tapped openings, and the size of the tapping, and whether the tapping is required or not. Where it is a grate bar, mention which one, numbering from the front, and whether it shakes on the left-hand side or the right-hand side.

Where a Boiler has no serial number on the little brass plate, please mention the fact that it has no serial number.

With these particulars we will be able to ship repairs promptly.

Give full shipping instructions.

Dear Sir;-

In answer to your letter 121-1-5 of the 14th inst regards jacket heater for the Gordon Indian Residential School, enclosing circular of the Leonard people.

The circular is returned herewith, also a cut of the old jacket heater which type is useless here but gives an idea of the size in use.

As far as I can determine the size required is what is quoted as a 5 horse power heater. I cannot give you quotation as to price as this is not available, it will have to be supplied you by the Leonard people an Ontario firm.

The following information should be submitted to the boiler people before they ship the boiler.

Inlet should be constructed to accomodate a two inch pipe, as shown on the circular, inlet is near bottom of jacket heater.

Outlet should also be for a 2" pipe.

If impossible to supply outlets of this size we will have to change the pipe system to the storage tank etc, I think the company can put in outlets as required if it is brought to their notice.

Your obedient servant,
Indian Agent.

EXD.

Ottawa, July 30th, 1937.

MEMORANDUM:

DEPUTY MINISTER.

On February 29th, 1936, I forwarded a memorandum to Mr. Pratt requesting the name of a competent plumber and steamfitter for some urgent repairs to the plumbing and heating systems at the Gordon's Indian Residential School, Punnichy, Sask. (Electoral District of Yorkton) I was given the name of E. H. Carter, Yorkton Plumbing & Heating Co., Yorkton, Sask. Among other work done at the school, the above firm installed, at that time, a jacket heater at a cost of $175.00.

Indian Agent Waddy has now advised that this heater has burst, due to corrosion from mineral salts in the water. He further states that the type of heater supplied is unsuitable, owing to the action of the water used, and recommends the installation of a 5 H.P. Flueless Upright Boiler, manufactured by E. Leonard & Sons Ltd., London, Ont. Attached is a page from Leonard & Company's catalogue giving a description of the 5 H.P. boiler recommended by the Agent.

I would appreciate your advising if you approve of our requesting E. Leonard & Sons to quote a price on this boiler, F.O.B. Punnichy.

In requesting a price from this firm, Mr. Waddy states that the following information should be submitted to them:

"Inlet should be constructed to accommodate a 2" pipe, as shown on the circular, inlet is near bottom of jacket heater.
Outlet should also be for a 2" pipe."

DEPARTMENT
of
MINES AND RESOURCES

Surveys and Engineering Branch.

August 18, 1937.

Memorandum:

Mr. Bailey.

I am returning herewith the memorandum of the Director of Indian Affairs together with Bulletin 522-B of E.Leonard & Sons, Limited, in regard to the proposed boiler to be used in the heating system at Gordon's Indian Residential School, Punnichy, Saskatchewan.

As requested in your memorandum we have had our architects look over the specifications for this boiler and are now submitting their report:-

"It appears from the information available that the boiler is required for use as a hot water heater and that owing to the presence of mineral salts in the water, the usual type of jacket heater has proved unsatisfactory.

"It is considered that the 24" diameter steam boiler recommended by the Indian Agent and listed under 5 H.P. in the bulletin above-mentioned, would be satisfactory.

"The firm asked to quote on this boiler should be advised that it is required for use as a hot water heater for a tank of 600 gallons capacity, that 2" diameter tappings are to be made for a cold water inlet connection near bottom of jacket heater and for hot water outlet at centre of top.

"Steam boiler fittings and mountings should be replaced by hot water boiler fittings including a suitable type of safety valve. Adequate clean-out holes with screw plugs should also be provided to insure that all parts of the water area may be cleaned to avoid corrosion from mineral salt action."

E. LEONARD & SONS

London, Aug.27,1937

Mr. R. A. Hoey,
Indian Affairs Branch,
Ottawa.

Dear Sir: Re your file 121-1-5
Boiler for Punnichy, Sask.

We have your enquiry of the 25th and are returning your form, on which we have quoted as follows,-

one (1) 6 H.P. Upright Boiler, as described in the enclosed Bulletin No.522, less steam trimmings, safety valve, water gauge, blow off valve and feed and check valves, which would not be required for hot water heating, for the sum of Two Hundred and Sixty one Dollars.....$261.00

OR

One (1) 5H.P. Flueless Upright Boiler, as described in our enclosed Bulletin No.522-B, which makes a very nice voiler for hot water heating as there are no tubes to clean, for the sum of Two Hundred and Forty Two Dollars...$242.00

These prices are f.o.b. Punnichy, Sask, Sales Tax included.

We could make shipment of the 6H.P. boiler from stock, but would have to mkae up the 5H.P. Flueless Boiler, and could ship in about two weeks.

Hoping to be favoured with your order we are

Yours very truly,

(SGD) E. Leonard & Sons Limited

Memorandum:

Mr. Wardle.

The following telegram has just been received from our General Superintendent of Agencies, Mr. Christianson, regarding the water supply at the Gordon's Indian Residential School.

> "Water situation at Gordon's School becoming serious. I would suggest that Water Power Branch be asked to send Fetterly to look into matter."

Would you kindly advise me if Mr. Fetterly's services are available and if not would it be possible to arrange to send another of your engineers to this school to attend to this matter.

Early advice from you would be appreciated as the question is of an urgent nature.

D.P.

The Gordon's Indian Residential School is in the Touchwood Indian Agency, near Punnichy, Sask.

Return to Mr. Walton after

1. Mr. Christianson.

2. Welfare under re boiler.

CANADA
DEPARTMENT
OF
MINES AND RESOURCES
INDIAN AFFAIRS BRANCH

Sept. 17, 1937.

Memorandum:

For the information of Mr. Christianson.

With reference to the water supply at the Gordon's School, the Surveys and Engineering Branch, to whom this matter was referred, were phoned a few days ago. They advised that instructions had been issued to their Prince Albert Engineer, presumably Mr. Dempster who visited File Hills recently, to proceed to this school and examine the conditions.

I pointed out to the Surveys and Engineering Branch that Indian Affairs had been instructed to refer all matters regarding obtaining water to the Mines Branch for their report as to locations where water would most likely be reached. They seemed to be unaware of this instruction, and promised to make note of it.

No report has yet been received from the Engineer making the investigation so far as I am aware.

Mr. R. A. Hoey,
Supt. Welfare and Training Division,
Indian Affairs Branch,
Ottawa, Ontario.

Dear Sir,

Re your File 121-1-5.
Boiler for Punnichy, Saskatchewan.

We have your enquiry of the 25th and are returning your form, on which we have quoted as follows, -

One (1) 6 H.P. Upright Boiler, as described in the enclosed Bulletin No. 522, less steam trimmings, safety valve, water gauge, blow off valve and feed and check valves, which would not be required for hot water heating, for the sum of Two Hundred and Sixty One Dollars..... $261.00.

OR

One (1) 5 H.P. Flueless Upright Boiler, as described in our enclosed Bulletin No. 522-B, which makes a very nice boiler for hot water heating as there are no tubes to clean, for the sum of Two Hundred and Forty Two Dollars..... $242.00.

These prices are f.o.b. Punnichy, Sask, Sales Tax included.

We could make shipment of the 6 H.P. boiler from stock, but would have to make up the 5 H.P. Flueless Boiler, and could ship in about two weeks.

Hoping to be favoured with your order, we are

Yours very truly,

E.LEONARD & SONS LIMITED.

J.A.Lamond.

Memorandum

Mr. Jackson:

Authority was granted to secure a quotation from E. Leonard & Sons Limited, of London, Ontario, on a water heater required for Gordon's Indian Residential School, Punnichy, Sask. A quotation has now been received from this firm as follows:-

	One, 6 H.P. Upright boiler -	$261.00
Approved (sgd) C.W.Jackson	One, 5 H.P. Flueless Upright boiler -	$242.00

Both f.o.b. Punnichy, Sask.

The quotation was submitted to the Director, requesting that he have his architects examine the quotation and advise which boiler was satisfactory. I am now advised that the 5 H.P. Flueless Upright boiler will be satisfactory.

I would, therefore, recommend that authority be granted to place order with E. Leonard & Sons Limited, of London, for the required boiler, at a cost of $242.00 f.o.b. Punnichy, Sask.

Respectfully submitted,

H.J.Davidson,
For - Departmental Purchasing Agent.

Memorandum

Mr. Bailey:

Re Gordon's Indian Residential School,
Punnichy, Sask.

With reference to your memorandum of the 1st instant relative to the purchase of a steam boiler for the above, the quotations submitted by E.Leonard & Sons have been examined and it is considered that the 5 H.P.Flueless Upright boiler No.522-B would be the more satisfactory of the two boilers.

Certain requirements for this boiler, however, which were outlined in the last paragraph of the Director's memorandum to you of the 18th ultimo are omitted from the note on the Request for Quotations No.353 to E.Leonard & Sons, dated August 25th, namely,-

The boiler shall be complete with hot water boiler fittings, including a suitable type of safety valve, and adequate clean out holes with screw plugs are to be provided to insure that all parts of the water area may be cleaned to avoid corrosion from mineral salt action.

Memorandum

Dr. H. W. McGill:

Replying to your memorandum of the 30th ultimo, relative to the boiler required for Gordon's Indian Residential School, the quotations from E. Leonard & Sons Limited were submitted to the Chief Engineer for advice as to the type of boiler suitable. I am forwarding a copy of his reply.

The matter was further submitted to Mr. Jackson for approval, and attached is a copy of this memorandum with approval thereon.

Order, therefore, may be placed with E. Leonard & Sons Limited, of London, for the 5 H.P. Flueless Upright boiler, at a cost of $242.00 f.o.b. Punnichy, Sask.

Gentlemen:-

With reference to your letter of August 27th, 1937, I would request you to ship the following to:-

J.W. Waddy, Esq.,
Indian Agent,
Punnichy, Sask.

One (1) 5 H.P. Flueless Upright Boiler, as described in your Bulletin No. 522-B.

It is understood that you will supply this boiler at the price quoted in your letter of August 27th, viz: $242.00 F.O.B. Punnichy, Sask., Sales Tax included.

I also understand that when you were requested to quote price on this boiler you were informed that the "Inlet" should be constructed to accommodate two inch pipe - "Inlet" is near bottom of Jacket Heater. "Outlet" should also be for a two inch pipe.

I note that you can make shipment within two weeks. If possible, shipment should be made earlier as the boiler is urgently required by one of our Indian Residential Schools.

Your account in triplicate should also be forwarded to Mr. Waddy, who, upon receipt of the boiler, will certify the account and send to the Department for payment.

Yours truly,

TRLM

T.R.L. MacInnes,
Secretary.

Dear Sir:-

With reference to your letter of the 3rd instant, an order has been placed with E. Leonard & Sons for,-

one (1) 5 H.P. Flueless Upright Boiler, as described in Bulletin No. 522-B.

The above is being supplied at a price of $242.00 F.O.B. Punnichy, Saskatchewan. It will be shipped within the next two weeks.

When the boiler is received, and if it is in good order, you should certify the account and forward it to the Department for payment.

Yours truly,

J.W.Waddy, Esq.
Indian Agent,
Punnichy.

Dear Sir,

Last Tuesday the water Pump at the Lake intake gave out, I endeavoured to fiz it here, but without success. I tried to get in touch with Dr. Robertson Regina, as you were away, on three occasions, he also was away from the city, so the only alternative was to get help myself.

McPhearson and Thorn of Regina who installed the pump seemed to be the right source for information. Mr. McPhearson came down Thursday with a man to put things in shape but was unable to do so, they returned to Regina for materials. I suggested that Mr. McPhearson should see Dr.Robertson to report the trouble, he spoke to me later on the phone that Dr. Robertson was still out of the city, I told him to carry on as we must have water. Whilst knowing I have not the authority to order and payment to be made by the Department, I hope that you will explain the predicament and urgent need for immediate action so that grant may be made for this work. You will remember my having spoken to you recently when here at the school, that the water supply should be given serious thought, the Lake having gone down considerably again this summer.

Yours truly,

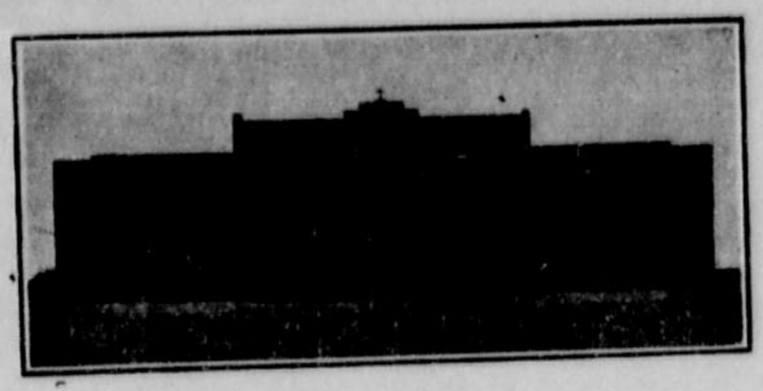

R.W.Frayling

Dear Mr. Waddy,-

This account of MacPherson & Thom is for work and materials rendered during your holiday and Dr. Robertson's absence from Regina at the same time. I called the Indian Office, Regina, three times during this period but was unable to reach Dr. Robertson.

There was no water supply at the School, and under these conditions I asked for the services of the above firm, knowing that work had been done by them on the water system here for the Department prior.

A copy of a letter mailed to your Office on July 16th is attached. This letter was typed by Mr. Southey as it was during holiday time.

Yours truly,

Principal.

ENGINEERING AND CONSTRUCTION SERVICE

Box 459, Prince Albert, Sask.,
18th September, 1937.

Dear Sir,-

Re: Water Situation, Gordon's Residential School.

In accordance with the instructions contained in your wire of the 4th inst., I visited the above school on September 11th.

The general scheme of the water system for the school is as follows:- Water is pumped from a small lake (really a slough) by a small rotary pump, capacity approximately 2000 gallons per hour driven by a gasoline unit, to a storage tank at the school. The water is treated in this tank and is pumped from there to pressure tanks in the school by a small typhoon self-oiling displacement pump electrically driven, capacity 1000 gallons per hour.

The difficulty encountered is in the suction line of the small rotary pump. The lake has lowered approximately eighteen feet in the last six years and this present summer the level has dropped approximately four and one-half feet. The 3" suction hose had been carried out approximately forty feet into the lake, below frost action, and thence along the lake bottom. This line plugged up and is possibly broken. A temporary suction line has been installed at the edge of the lake but will not do during the winter.

In my opinion the actual suction line should not be continued out into the lake below frost action because of the difficulty encountered in repairing the valves and line.

I would recommend that a well with timber lining be constructed near the shore connected by a pipe to the lake (approximately eighty feet long laid below frost action) as the subsoil is yellow clay, which would not permit sufficient filtration even for the small demand required. The suction line of the pump would then be located in the well and accessible at all times. The well would have to be covered and protected from frost action as much as possible.

The Chief Engineer,
Engineering & Construction Service,
Surveys & Engineering Branch,
Department of Mines & Resources,
OTTAWA, Ont.

Indian Affairs. (RG 10, Volume 6311, file 654-5, part 8)

POOR COPY

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

Library and Archives Canada / Bibliothèque et Archives Canada
www.collectionscanada.gc.ca

It is essential that the pipe leading from the well to the lake be in at least eight feet of water so that in the event of another dry season or two the pipe will not have to be lowered. In the event of two more seasons as dry as the present one, I doubt if there will be enough water left to supply the school demand, which is approximately 5000 gallons per day.

I believe that the recommendation made above is the most satisfactory rather than to go to the expense of locating a deep well. This may be necessary in the event of continued drought but, should average rainfall occur in the next seasons, there will be sufficient water in the small lake to supply the needs of the school.

The following is an estimate of the cost of construction of the proposed well and pipe into the lake:-

Pipe & Fittings	$ 125.00
Lumber, etc.	130.00
Labour	175.00
Rental Equipment	30.00
	$ 460.00

The fact that the intake will have to be carried below frost line, necessitating cofferdaming, accounts for the relatively high cost of such a small job. It may be found that certain of the present intake pipe may be salvaged without incurring too much expense.

The other alternative of laying a new intake below frost action could be considered. However the difficulty encountered in reaching the intake in case of trouble does not warrant the slight saving that might be made.

As I have mentioned, the only other alternative would be to consider the drilling of a deep well as I understand there are no shallow wells in that vicinity. Should this be considered it would be necessary to have a geologist's report of that particular section. The well would have to be located reasonably close to the school and possibly the location of the pump house and discharge lines would have to be relocated. I understand from Mr. Waddy that the school location is almost on the line of Sections 10 and 11, Township 27, Range 17, West of the 2nd Meridian.

Indian Affairs. (RG 10, Volume 6311, file 654-5, part 8)

In regard to the estimate of the cost, the estimate for labour may be high should conditions prove better than anticipated. This particular type of work really requires a pile driver for the sheet piling but the job is too small to warrant such expense as there is no equipment of that kind in the vicinity.

Yours faithfully,

(Sgd.) H. Dempster

Junior Engineer.

Re: WATER SUPPLY.

Dear Sir,-

This matter should be given immediate attention or there will be no supply to the School.

I understood when the Water Expert was here that operations would be started within a short while, but so far nothing has been done to remedy this serious question. For instance the Iron Pipe for furthur extension to the Intake Pipe was so long in coming that I had a length taken from another place and attached, as mud was being brought up. This makes unnecessary extra work as we now have to replace with the new pipe since received. The intake at present is in 3 feet of water, the pipe exposed some 40 feet. If frost sets in the pipe will be frozen resulting in no water at the School.

I have again gone to the expense of having the depth of water taken at Fort Lake about 3 miles directly East of the School resulting in the following; from shore to centre varying from 4' to 16'. It has an expanse of water twice or three times larger than the one we draw from now. There is a natural drop to the

Regina, Sask.

Dear Sir,-

Re: WATER SHORTAGE.

I have taken up the question of the above with Indian Agent, Mr. Waddy, since last June repeatedly, with no result other than your visit and the Water Expert to look the matter over.

As pointed out in my last letter to Mr. Waddy there is an exposure of some 40 feet of pipe. On the first heavy frost our supply is cut off. The intake now is in about 2 feet of water - the pipe lying in some 25 feet of water varying in depth from the bank of the lake to the intake valve.

Is it not possible to have something done to assure the School having this remedied at once?

Dr. Robertson,
Regina, Sask.

I have had the depth of water taken at Fort Lake which is about 2½ to 3 miles East of here and it varies from 4 feet to 16 feet of water. This I gave to Mr. Waddy two weeks ago.

The condition is very serious, and it ismost inconsiderate of the Department in not having attention given to this long ago. Soon, weather conditions will make the work doubly hard. Trusting you will use every effort possible to relieve the situation without furthur delay.

MEMORANDUM:

Mr. Wardle.

With reference to your memorandum of October 1st and my reply of October 6th regarding the water supply for Gordon's Indian Residential School, Punnichy, Sask., I am today in receipt of a letter from Inspector Robertson enclosing letters from both Indian Agent Waddy and the Principal of the Gordon Indian Residential School, urging immediate action.

The Principal writes in part as follows:

" Unless immediate action is taken, it will cost twice as much to get a supply, whether from the source suggested or any other, apart from the fact, if supply is cut off, there is nothing else to do but close the School."

I should appreciate any action you can take to have this work receive immediate attention.

Dr. McGill

Re: Gordon's Indian Residential School, Touchwood Agency, Punnichy, Sask.

In connection with the work being carried on to secure a water supply for the above school, $460.00 was recently transferred by you to this Branch to cover the original estimate of cost. We are now advised by Mr. Dempster, the Engineer in Charge, that owing to trouble with a cofferdam and the necessity for protecting temporary intake from frost, an additional $150.00 is required for labour. We are further advised that this work should have been completed on the 16th of this month.

Will you kindly have an additional $150.00 transferred to the Engineering and Construction Service of this Branch.

Surveys and Engineering Branch

Ottawa, December 13, 1937.

MEMORANDUM:

Mr. Wardle.

Re: Gordon's Residential School, Punnichy

With reference to the above project the following is quoted from a report received from Mr. Dempster.

"Work on this project was completed on November 19th consisting as follows:-

lst 460 & 610
2nd 460 / 150

A well 4.5' x 4.5' x 10' was excavated and lined with two inch plank and braced. At an elevation of three feet above the bottom of the well sixty-five feet of 3" pipe let into the lake to a screened inlet. The end of the pipe is 2½ feet from the lake bottom and is subjected to a head of 4.5 feet of water. It was necessary to cofferdam approximately 45 feet in order to make the excavation and considerable difficulty was experienced in driving the sheet piling (made up of three pieces of 1" x 8" plank with 1½" tongue and groove) as it had to be driven by hand and the lake bottom was exceptionally rocky, resulting in numerous leaks in the cofferdam. In order not to have to cofferdam the full 65 feet to lay the pipe two 45° elbows were used to allow the last length of pipe to be lowered after the back filling was completed. The pipe is back filled to a depth of eight feet, with a layer of hay near the pipe for added protection. The pipe from the lake to the well may be regulated by a 3" gate valve. The original idea was to have the pump take the water right from the well. However Mr. Field had considerable trouble with black muck seeping into the well and eventually had to connect the suction of the pump to the pipe leading into the lake. What really should have been done when the excavation revealed black muck was to make the lining of a construction similar to the sheet piling only with a 3" tongue and groove. However the system is operating satisfactorily and, if found necessary, the well

Indian Affairs. (RG 10, Volume 6311, file 654-5, part 8)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

POOR COPY

Library and Archives Canada / Bibliothèque et Archives Canada
www.collectionscanada.gc.ca

could be concrete lined at some future date. When it was found necessary to connect the suction clear through to the lake, the last length of pipe was swung up by means of the elbows and a float valve connected.

Owing to the severe frost conditions it was necessary to protect the temporary intake from freezing. This was not anticipated when my original estimate was prepared, also the amount of trouble experienced with the cofferdaming was not expected, hence the necessity of additional funds.

The well section itself has been adequately protected from frost.

The expenditure, with the exception of the pipe and fittings, is as follows:-

Labour.....	$ 327.04
Lumber.....	138.18
Nails, etc....	5.38
	$ 470.60

The question of how long the new intake will prove satisfactory depends on whether or not the drought season continues as there is no inlet or outlet to the lake.

There is a sizeable lake approximately three and a quarter miles away, from which water could be drained into the lake at the school and I had Field run a set of levels over and gather certain information, which I will forward in the near future in case the question of feasibility of locating a deep well or filling the lake by draining from this other lake comes up."

From this report, it will be noted that considerable trouble was experienced in the work carried out. The system is now operating satisfactorily but owing to the size of the lake from which water is taken, Mr. Dempster seems to be doubtful as to whether the water supply question has been finally settled for this school. He has had certain surveys run with regard to the supplementing of water in the small lake from a larger lake 3½ miles away. When Mr. Dempster's report is received regarding the findings of these surveys, you will be advised.

Respectfully submitted,

(Sgd.) T. S. Mills.

Dr. McGill.

Re - Water supply, Gordon's
Residential School, Punnichy.

I am forwarding herewith, for your information, copy of our Engineer's report on the work done to provide a water supply for the above School. You will note that adequate protection against frost has been given to the well and to the pipeline leading to the lake. However, as the lake at the intake is not of any great depth, some trouble might be experienced there if the lake level lowers to any great extent throughout the winter months. You will note that our Engineer is not entirely satisfied with the supply and that he has been making some investigations of a water supply from a lake some 3½ miles away.

INSPECTOR OF INDIAN AGENCIES

CANADA
DEPARTMENT
OF
MINES AND RESOURCES

INDIAN AFFAIRS BRANCH

312-11 ACE

Regina, March 29th, 1938.

APR 1 1938

Dear Sir;-

I have received a letter from Mr. J. W. Waddy, Touchwood Agency, in which he states the need of extensive repairs to the water system at the Gordeon Indian Residential School, owing to the fact that the whole water distribution system at the school is gradually filling up with deposit, and considerable of the parts being eaten away due to minerals in the water.

A detailed list of repair parts necessary is attached hereto marked Lot #1.

The small laundry boiler also needs retubing, also a safety valve 1¼" and pemberthy injector left hand 1½ replaced. This is listed under Lot #2.

The main large heating low-pressure Leonard boiler- 64 tubes - needs retubing. The principal states the boiler has been in daily use for over 8 years without cost. Listed under Lot #3.

Lists #4 are flanges and plugs for pressure tanks and Lists #5 and 6 gaskets for filter manhole and hot water tank. Repairs are needed for Fairbank-Morse engine 6 H.P. Z type 713583 listed under Lot #7 and repairs for Fairbank-Morse 5 H.P. engine Z type "B" 770678 listed under Lot #8.

Repair parts are also needed for Lister engines 6½ and 14 H.P. as shown on List #9.

The...

www.collectionscanada.gc.ca

The Principal also asks for a new 2½ gas engine for baking (Fairbank-Morse preferred) stating that the one at present is beyond repair. It dates from the time of the previous school. This is listed under Lot #10.

The Principal states that the McClary Famous Army kitchen cook range needs a complete new top to ovens and fire boxes and new fire bricks and that a new stove would not cost much more than repair parts and mechanic's wages and asks for a new stove. Listed as Lot #11.

100 lbs asbestos cement for covering hot water boiler recently installed is also required. Listed as Lot #12.

Regarding the new kitchen cook range asked for, there is a very good range in storage at the File Hills Agency, which was formerly in use at the Indian Hospital, Lorlie. This would be quite suitable for use in the school and I would recommend that authority be granted to transfer the range to the Gordon school.

I have obtained the approximate cost of Lots #1, 2, 4, 5 6 and 12 delivered to Punnichy, which is $1172.25. The Fairbank-Morse Company's price on Lots #7,8 and 10 is $148.46 and for repairs to Lister engine - Lot #9 - approximately $37.00.

I did not obtain prices on the 64 tubes for the Leonard boiler or for the 36 tubes for the vatical laundry boiler as we do not appear to have any local firm on this list handling this class of work.

The work of replacing the parts listed in Lot #1 could be done by the engineer at the school but the re-tubing would have to be done by a qualified man.

The cost of the repairs, etc., for which I have obtained prices is around $1350.00 and there are still several items to be accounted for as well as the cost of labor installing. It appears necessary, however, to have this done and I would recommend that authority be granted to purchase the necessary repair parts and for the installation of the same.

Yours truly,

Thos. Robertson

FILED.

Ottawa,
April 2, 1938.

Dear Sir:

I am in receipt of your letter of the 29th ultimo enclosing list of repairs etc. requested by the Principal of the Gordon's Indian Residential School.

It was found possible to include in our appropriation for the fiscal year 1938-39 an amount of $500.00 for repairs, improvements and purchase of new equipment at the Gordon's Indian Residential School. I regret that it is not possible to allow a larger amount.

Please let me know which request of the Principal you recommend should receive first consideration, keeping in mind the fact that only $500.00 is available.

The Department approves transferring to the Gordon's Indian Residential School the new kitchen range which is at present in storage at the File Hills Agency.

Yours truly,

R. A. Hoey,
Supt. of Welfare & Training.

Dr. Thos. Robertson,
Inspector of Indian Agencies,

Dear Sir;-

Re Your #121-1-5 of April 2nd
Gordon's Indian School

I beg to recommend that the $500.00 ~~of the~~ appropriation be expended as far as it will go in the following order;-

1. Small laundry boiler retubed with a safety valve 1¼ inches and pemberthy injector left hand 1½ replaced.
2. Leonard boiler, 65 tube to be retubed.
3. Flanges and plugs put on pressure tanks.
4. Two gaskets 11 X 15 put on hot water tank.
5. Two gaskets 9 x 15 put on filter manhole.
6. Repair parts as per list sent in my letter of Mrach 29th and marked items 7, 8 and 9 for gasoline engines and lister lighting plant.
7. 100 lbs asbestos cement to cover a boiler.
8. List of repair parts for renewal of pupes as per list marked #1 in my letter of March 29th
9. Gasoline engine 2½ h.p. for bake shop.
10. Appropriation of $100.00 for painting windows.

121-1-5

Ottawa,
April 25, 1938.

Dear Sir:

With reference to your letter of the 10th instant regarding repairs and improvements required at the Gordon's Residential School the Department approves of arrangements being made for the following items:

1. Small laundry boiler retubed with a safety valve 1¼ inches and pemberthy injector left hand 1½ replaced.

2. Leonard boiler, 65 tube to be retubed.

If new tubes will be necessary and the cost of these amounts to more than $50.00 it will be necessary for you to forward full particulars regarding the tubes in order that the matter may be placed before our Purchasing Agent.

If, however, the cost of new tubes will not exceed $50.00 you may arrange for their purchase and have the work completed as soon as possible.

As I previously informed you there is only an amount of $500.00 available for repairs, improvements and new equipment at the Gordon's Residential School this year. Before deciding on the other requests of the Principal we will have to know what expenditure will be involved in retubing the two boilers.

Yours truly,

Dr. Thos. Robertson,
Inspector of Indian Agencies,
Regina, Sask.

R. A. Hoey,
Supt. of Welfare & Training.

DEPARTMENT OF INDIAN AFFAIRS
CANADA

11A. C.E.

OFFICE OF
INDIAN AGENT

Punnichy, Sask.
April 29 1938.

The Secretary,
Indian Affairs Branch,
Ottawa.

Dear Sir;-

In further reference to boiler repairs to Gordon Indian Residential School, I beg to say that Mr. Carter came here to-day from Yorkton, Sask. to see about putting in the tubes in boilers that require them. He says it would be useless to put in the few tubes that have blown out, we have two of them and six more plugged now in the vertical boiler. If these are put in the others will blow out. Last week when the tube blew the steam just missed scalding the engineer, so I have told the principal to shut off the boiler altogether, I do not know how he will get on, but he will have to do the best he can for a few days.

To-day I took this matter up with the inspector again, he has your last letter saying not to exceed $50.00 without taking up the matter again with you, but he told me to write this letter direct to save time and to give an exact estimate, or as good as possible, of the proposed work.

Mr. Carter has given me figures and I have placed the estimate on the enclosed sheets. This is not exact to a dollar and is not a tender, but is very close to what total cost will be.

Will you please wire either the inspector or Mr. Carter of Yorkton on receipt of this letter so we can get thejob done at once, it should have been done long ago as we have been taking chances on serious damage to the old engineer of the school.

A recommendation was made years ago for a water softener at this place, this would do away with all this boiler expense, but the matter was refused.

Your obedient Servant
J. Kennedy
Indian Agent

Ottawa,
May 4, 1938.

Memorandum:

MR. BAILEY

Reports have reached this Branch that the boilers in the Cordon's Indian Residential School, Punnichy, Sask., Electoral District of Last Mountain, will have to be retubed. Their condition is so bad that the Agent writes as follows:

"I have told the Principal to shut off the boilers altogether. I do not know how he will get on but he will have to do the best he can for a few days."

Mr. Carter of Yorkton, Sask., examined the boilers and estimates that the cost of repairing them will be approximately $510.00. On purchase requisition form attached I am giving details of Mr. Carter's estimate.

I would appreciate if you would give this matter immediate attention in order that the boilers may be repaired at as early a date as possible.

H. Jewell,
Director.

Regina, April 26th, 1938.

DOMINION MINES & RESOURCES
APR 30 1938
RECEIVED

R

Dear Sir;-

The Principal of Gordon's Indian Residential School asks that the water situation at that point be again reviewed. Last fall owing to the recess of the water in the lake or slough from which the school gets their supply the intake was extended and lowered, the spring run off has not increased the amount of water in this lake, in fact it is lower than it was last fall.

If this condition continues there will be a very serious water situation at this school.

There is a lake up in the hills some distance from the school which it has been suggested might be drained into the school lake.

I think Mr. Dempster, the engineer who had charge of the work done at the school last year, checked up on this matter.

I would recommend that an engineer be sent to go into this matter and that he be asked at the same time to report on the water situation for Gordon's and Poor-man's reserves and at the Agency.

Mr C
Sup OK
PP

If any diversion of the water on the lake is attempted it should be done as early as possible to conserve the supply.

Yours truly,

Thos. Robertson,
Inspector of Indian Agencies,
Saskatchewan.

Dear Sir:

I am in receipt of your letter of the 26th ultimo with reference to the water situation at the Gordon's Indian Residential School. I am requesting the Surveys & Engineering Branch to have one of their engineers go to Gordon's School in the near future. At that time he is being requested to also report on the water situation on Gordon's and Poorman's Reserves and at the Agency.

Yours truly,

R. A. Hoey,
Supt. of Welfare & Training.

DIRECTOR

Surveys & Engineering Branch

Re: Gordon's Indian Residential School

I desire to refer you to your memorandum of December 15, 1937 and previous memoranda with reference to the water supply system at the above school. We have just received the following letter from Mr. Thos. Robertson, Inspector of Indian Agencies for the Province of Saskatchewan:

"The Principal of Gordon's Indian Residential School asks that the water situation at that point be again reviewed. Last fall owing to the recess of the water in the lake or slough from which the school gets their supply the intake was extended and lowered. The spring run off has not increased the amount of water in this lake, in fact it is lower than it was last fall.

"If this condition continues there will be a very serious water situation at this school.

"There is a lake up in the hills some distance from the school which it has been suggested might be drained into the school lake.

"I think Mr. Dempster, the engineer who had charge of the work done at the school last year, checked up on this matter."

I would appreciate it if you would arrange to have one of your engineers visit Gordon's School at an early date and advise what he considers could be done to improve the water supply system.

At the same time the engineer might report on the water situation for Gordon's and Poorman's Reserves and for the Agency which is located near Punnichy. Our Agent at that point is Mr. J. W. Waddy.

Copy sent to Inspector Robertson

EX'D.

Ottawa,
May 11, 1938.

Dear Sir:

I am in receipt of your letter of the 29th ultimo with reference to the retubing of the boilers at the Gordon's Indian Residential School.

You may authorize Mr. Carter to proceed with the necessary work at a cost not exceeding $510.00.

The Principal and yourself will be expected to supervise the work and see that the repairs are made as expeditiously as possible in order to avoid any unnecessary expense.

In preparing our estimates for the current fiscal year it was only found possible to include an amount of $500.00 for repairs, improvements and purchase of new equipment at this school. The expenditure authorized in this letter slightly exceeds the amount specifically provided in our appropriation for the Gordon's School and consequently it will not be possible to consider further expenditures at this school during the current academic year.

Yours truly,

R. A. Hoey,
Supt. of Welfare & Training.

DEPARTMENT OF INDIAN AFFAIRS
CANADA

121-1-5

11A. C.E.

OFFICE OF
INDIAN AGENT

Punnichy, Sask.
May 11 1938.

Dept. of Mines & Resources
Indian Affairs Branch
MAY 14 1938
RECORDS

Dear Sir;-

I would be obliged if the following matter could be looked into and instructions given me.

When Gordon School was completed the Department supplied them with a bake oven as follows.

General Steel Wares. #115 bake oven. for coal.
Voucher (part) #142
Dated here June 30 1931.
Amount $176.75.

later another was supplied,

General Steel Wares. #2 Homestead oven,
Voucher #360.
Dated here Nov 2. 1931.
Amount 428.00.

The Department does not seem to have any correspondence with this office about the above, but the stove people have a letter which refers to your file 121-1-12 of December 30th (no year stated).

Order placed direct by Dept + paid for Nov/31

The #115 oven is a pie oven and was not suitable and either the Department or the then Indian Commissioner bought the #2 Homestead oven. #115 was used at the school for a time.

What I want to find out is who really owns the two ovens, if we paid the two vouchers we own them.

Length of time used - present condition

The #115 oven has been in my warehouse here for years, and every time a traveller of the General Steel Wares comes around here they talk about the oven. We have no use for the oven and if we own it perhaps the salvage department might be able to handle it.

Your obedient servant,

Indian Agent.

FIX'D.

Ottawa,
May 17, 1938.

Dear Sir:

I am in receipt of your letter of the 11th instant with reference to the bake oven supplied to the Gordon's Indian Residential School.

You will probably remember that at the time the Department was outfitting the Gordon's School there was considerable trouble in connection with the bake oven. Through some misunderstanding between the Department and General Steel Wares the No. 115 bake oven was first supplied and when it was found that this was not large enough a No. 2 Homestead oven was purchased. Both of these ovens were paid for by the Department and, therefore, both of them are our property.

There was some correspondence in 1931 with a view to having the No. 115 oven returned to General Steel Wares. However, this oven was used for a time and, therefore, could not be sold as a new oven. Apparently, no further action was taken toward disposing of it as I note from the last paragraph of your letter that it has been in your warehouse for some years.

Before we can dispose of it it will be necessary to obtain the approval of the Salvage Officer. I would, therefore, appreciate if you would let me know the exact length of time that this oven has been in storage, also its present condition. I also note that the traveller

from General Steel Wares has seen the oven on several occasions. Would this Company make any offer for it as they are in the best position to re-condition it and dispose of it. If so, you should let me know what amount they would give for it in order that I can give this information to the Salvage Officer.

Yours truly,

Memorandum:

MR. BAILEY

Reports have reached this Branch that the boilers in the Gordon's Indian Residential School, Punnichy, Sask., Electoral District of Last Mountain, will have to be retubed. Their condition is so bad that the Agent writes as follows:

"I have told the Principal to shut off the boilers altogether. I do not know how he will get on but he will have to do the best he can for a few days."

Mr. Carter of Yorkton, Sask., examined the boilers and estimates that the cost of repairing them will be approximately $510.00. On purchase requisition form attached I am giving details of Mr. Carter's estimate.

I would appreciate if you would give this matter immediate attention in order that the boilers may be repaired at as early a date as possible.

AB.

DIRECTOR
MAY 17 1938
SURVEYS & ENGINEERING

I.A.1580-4

May 17, 1938.

MEMORANDUM:

Mr. Wardle.

Re: Water Supply, Gordon's Indian Residential School.

I have your memorandum of the 16th instant with attached copy of a memorandum which you have received from the Director of the Indian Affairs Branch with reference to failure of the water supply at the above school.

In this connection I refer you to my memorandum of December 13th, 1937, which quoted the final report received from Mr. Dempster upon completion of the work undertaken by him at this school last fall. From this report the following paragraph is re-quoted:

> "The question of how long the new intake will prove satisfactory depends on whether or not the drought season continues, as there is no inlet or outlet to the lake. There is a sizeable lake approximately 3½ miles away from which water could be drained into the lake at the school, and I had Mr. Field run a set of levels over and gather certain information, which I will forward in the near future in case the question of feasibility of locating a deep well or filling the lake by draining from this other lake comes up."

From the above, it will be noted that Mr. Dempster did not guarantee that there might not be a further shortage of water at the school in question particularly in case the then existing dry conditions might be continued. Mr. Dempster has not to date forwarded the information regarding securing the water from the lake 3½ miles away, and we are accordingly writing him for a further report. When same is received, you will be further advised.

Respectfully submitted,

T.S. Mills

MAY 28 1938
RECORDS

Punnichy, Sask.
May 23 1938.

Dear Sir;-

Re letter 121-1-5 of May 17th last regards bake oven 115, formerly supplied to Gordon Indian Residential School, I beg to say that this oven has been in store here since 1931. The condition of the oven is good, it was used and is smoked up slightly.

I think the General Steel Wares people would refuse to take it back for cash, one time I asked about this and was told that if we shipped it to head factory Ontario and paid out freight they might be able to do something about selling it if they got enquiries for a second hand oven. This meant putting out good money without any real chance of recovery, the company is in busines to sell new goods and would certainly try to sell their own stuff first.

If the Ontario people are like they were when I was a boy they make their pies in the kitchen, this is the only pie oven I ever saw or heard of, but the salvage people may get a customer for it, they come in contact with so many people, but I would not pay freight on it myself.

I kept mum about this oven because it was such a mess of a job of purchasing I did not want to get tangled up in any correspondence about the deal, I was not responsible for the purchase. Now that all the officials concerned are gone, and do not care what happens, I can bring the matter to light and try to salvage something, before I get so old that I will be off the job myself.

INSPECTOR OF INDIAN AGENCIES' OFFICE,
REGINA, SASK., July 4, 1938.

Dear Sir:

I am in receipt of a letter from Mr. Waddy, stating that on his last visit to Gordon Indian Residential School, he found the building completely renovated inside. The principal has had it kalsomined and painted from roof to cellar. He has also put a new cement foundation under one end of his implement shed, all this work being paid for from funds saved from his per capita grant.

Mr. Waddy also advises that the retubing of the boilers is now completed, but states that the stove shipped from the old File Hills Hospital is too small, and in any event would require new grates. He feels that the principal should be given a new stove, or the repairs necessary for the old one, if any funds are available.

Yours truly,

Thos. Robertson,
Inspector of Indian Agencies,
Saskatchewan.

The Secretary,
Indian Affairs Branch,
Dep't of Mines & Resources,
Ottawa.

Ottawa, July 8, 1938.

Dear Sir:

I am in receipt of a letter from Dr. Robertson, part of which reads as follows:-

> "Mr. Waddy also advises that the retubing of the boilers is now completed, but states that the stove shipped from the old File Hills Hospital is too small, and in any event would require new grates. He feels that the Principal should be given a new stove, or the repairs necessary for the old one, if any funds are available."

The cost of retubing the boilers slightly exceeded the amount specifically provided in our current year's appropriation for this school. However, if you consider new grates will put the stove in condition to use, you may purchase them. If you do not consider it advisable to purchase new grates for the stove that has been shipped to the school, you might let me know the approximate cost of a new stove. In this event, you should give full particulars and catalogue number. I am not certain that our funds will permit the purchase of a new stove, but the matter will receive careful consideration.

Yours truly,

Philip Phelan,
Chief, Training Division.

Re - Gordon's Indian Residential School, Punnichy, Saskatchewan.

May 9/38

With reference to your memorandum of the ~~9th instant~~, a report has been received from Mr. Dempster but as further information is required, Mr. Dempster has been asked to supplement his report. When this is done, it will be forwarded to you.

As regards your request that our Engineer look into the water situation for Gordon's and Poorman's Reserves and for the agency located near Punnichy, the Chief Engineer advises that owing to the pressure of work now on hand, Mr. Dempster has not been able to leave Prince Albert up to the present time. Will you please advise me if you consider it urgent that a report be obtained on these water systems at once, or if it will be satisfactory if Mr. Dempster makes his inspections when most convenient for him.

Dear Sir:

Ref: My 312-11ACE of July 4th,
Gordon's Residential School.

With further reference to the repairs needed for the stoves, Mr. Waddy advises that in 1936 we purchased two complete tops for this stove, which is a Double McClary Army Range, at a cost of $52.30.

He says that at the time these tops were bought, the McClary man told him that he thought they carried heavier tops than the one supplied.

These tops carry a very heavy load at all times, as cooking for such a large number means a lot of food to cook. Both these tops are now gone, and Mr. Waddy recommends that two new tops be supplied if at all possible.

Those bought in 1936 were purchased from E. H. Carter, Yorkton, Sask.

Yours truly,

Thos. Robertson,
Inspector of Indian Agencies,
Saskatchewan.

COPY/AB

REPORT RE GORDON'S RESIDENTIAL
SCHOOL AT PUNNICHY, SASK.

With reference to the water supply for the above school, which is at present being pumped from a small lake approximately 900 feet from the school, this lake is not fed by any creek or springs, although there are signs of a small drainage channel which might have carried a small quantity of water into the lake in years of normal rainfall.

In spite of the abundance of rainfall this year thelake is lower than before. The possible reason for this is that due to the past years of drought, the sub-soil moisture is practically negligible, and will take the moisture for some time before allowing any run-off, (run-off being the only available way to raise the lake level).

The question of water supply for the school is confined to two alternatives - (1) Attempting to locate a deep well close to the school site, or, (2) Bringing water into present lake from Fort Lake, a distance of a little over 3 miles. The enclosed sketch (not to scale) shows the relative location of chains of sloughs, etc., from Fort Lake to Gordon's School. This sketch was made by G.B. Field from a compass survey.

In bringing water from Fort Lake 3 methods are possible:

1. By Pumping.
2. By Gravity Flow through 6" corrugated iron culvert controlled by flood gates at Fort Lake.
3. By excavating a ditch and controlling the flow through it by gates at Fort Lake.

The main objections to method 2 is the cost of excavation to get a suitable grade. This may be seen by glancing at the profile.

The objection to method 3 is that the excavation would be heavier than that required in method 2 (although no pipe would be bought) and that many of the flat areas such as from station 35-00 to 75-00 would of necessity flood before water could arrive at the lake at Gordon's School.

To my mind, should it be decided to bring water in from Fort Lake, the best method would be to erect a small pump house at the lake and run a surface line down to the school.

The demand of the school is very small, a maximum of approximately 6000 gallons per day, and an average daily demand of approximately 4000 gallons per day.

I believe, were a pump installed at Fort Lake, having a capacity of 10,000 gallons per hour, by operating it for three months in the summer season or longer if necessary, a minimum of 6,000,000 gallons could be pumped

Indian Affairs. (RG 10, Volume 6311, file 654-5, part 8)

POOR COPY

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

Library and Archives Canada / Bibliothèque et Archives Canada
www.collectionscanada.gc.ca

into the lake at the school, and hence the lake could be kept at the desired level.

I believe the question of water supply for the school boils down to either attempting to locate a deep well, or pumping from Fort Lake.

It is impossible for me to estimate the cost of a deep well, as one might drill several places and not locate water, or water might be found with the first attempt. From information I gathered last year while at the school, there is absolutely no chance of locating any shallow wells.

The following is an estimate of the cost of pumping water from Fort Lake:

Erection of Pump House at Fort Lake	$ 1,000.00
Gasoline driven centrifugal pump	700.00
2" Pipe (approx. 18,500 feet)	6,600.00
Freighting & installing pipe	700.00
Concreting present well at school	100.00
Clearing tote road to Fort Lake	200.00
Valves, drainage cocks, etc.	75.00
Material for pipe trestles	100.00
Contingencies	525.00
	$10,000.00

Two inch pipe is recommended because the spread in price (wholesale) between 2" and 3" pipe is nearly 40¢ a foot, and it is more economical to use the 2" and increase the horse power of the pumping unit rather than use a small unit and a larger pipe.

The fact that there are no facilities of any description at Punnichy, and the school is several miles away, greatly increases the cost of any work. All material will have to be freighted by truck to the school, and from there to the job, by team.

The enclosed sketch plan is not to scale, and the chainage on the profile is only paced. However, the levels were run by Mr. Field, and I have every reason to believe them accurate. The various sloughs, etc. shown, could not be counted on to be used to pump water, and Fort Lake is the only lake to supply such water.

In the event of a decision being made to pump water from Fort Lake, a more accurate survey will have to be made, and sounding, etc. taken over Fort Lake.

AB. I.A.1580-4

July 23, 1938.

MEMORANDUM:

Mr. Wardle.

Re: Gordon's Indian Residential School, Punnichy, Sask.

Encl.

In reference to your memorandum of May 16th last and further to our memorandum of the 11th instant, I am enclosing herewith report received prepared by Mr. Dempster with regard to water supply at the above school. It might be noted that this report is prepared from information obtained last fall, and that Mr. Dempster, owing to other work on hand, has not been able to visit the Gordon School this season. Blueprint copies of a sketch showing approximate position of creeks and sloughs from Fort Lake to Gordon's Residential School as well as profile of the suggested pipe line are also attached.

It will be noted that Mr. Dempster is of the opinion that the whole question comes down to a decision between two alternatives, mainly to locate a deep well or pump water from Fort Lake. With regard to the first alternative no estimate is available of the probable cost, as it might be necessary to try more than once before a suitable supply of water could be obtained. As regards the second alternative Mr. Dempster's estimate is $10,000.00.

In view of the difficulty there has been with wells for the supplying of water at Indian schools, we are inclined to favour the obtaining of the required supply of water from Fort Lake. This would appear, however, to be a matter on which an expression of opinion might be obtained from the Indian Affairs Branch as regards the amount of money which they are prepared to expend at this school. If the Fort Lake alternative is finally adopted, it should be noted that a more accurate survey than the reconaissance run last fall will have to be made and soundings taken over Fort Lake.

Respectfully submitted,

T.S. Mills

Memorandum:

Dr. McGill.

Re - Water supply, Gordon's Indian Residential School, Punnichy, Sask.

With reference to the above, I am forwarding herewith copy of a memorandum from the Chief Engineer with a copy of a report furnished by Mr. Dempster.

It will be noted from Mr. Dempster's report that from any information he has been able to gather there is no possibility of supplying water at the above point from shallow wells. The experiences of others in this locality are that a very deep well is necessary and that in many instances water is not even then found.

As an alternative Mr. Dempster considers it practicable to bring water from Fort Lake. The estimated cost is $10,000. This provides for a pump installed at Fort Lake, having a capacity of 10,000 gallons per hour. A sketch plan is attached showing the position of the lake and the line it is proposed to take in carrying the water down to the school. There is also attached a blue print showing ground elevations of the pipeline.

The possibility of securing water by drilling in this locality has been discussed with the Boring Division of the Mines and Geology Branch but unfortunately they have no information at this point.

Will you kindly advise me of your wishes in the matter.

J. B. Wardle
Director.

EX'D.

Dear Sir:

Referring to your letter of April 26 regarding the water situation at the Gordon's Indian Residential School the Department has just received a report from the Surveys & Engineering Branch. This reads in part as follows:

"It will be noted from Mr. Dempster's report that from any information he has been able to gather there is no possibility of supplying water at the above point from shallow wells. The experiences of others in this locality are that a very deep well is necessary and that in many instances water is not even then found.

"As an alternative Mr. Dempster considers it practicable to bring water from Fort Lake. The estimated cost is $10,000.00. This provides for a pump installed at Fort Lake, having a capacity of 10,000 gallons per hour. A sketch plan is attached showing the position of the lake and the line it is proposed to take in carrying the water down to the school. There is also attached a blue print showing ground elevations of the pipeline.

"The possibility of securing water by drilling in this locality has been discussed with the Boring Division of the Mines and Geology Branch but unfortunately they have no information at this point."

It is not possible to provide an amount of $10,000.00 from the current year's appropriation and it is unlikely that this amount can be secured during the fiscal year 1939-40. Please let me have a report on the water situation at the Gordon's school at the present time. Has this improved since spring?

Yours truly,

R. A. Hoey,
Supt. of Welfare & Training.

EX'D.

Ottawa, September 8, 1938.

Dear Bishop Knowles:

I have for acknowledgment Your Lordship's telegram of September 7, in which you ask that immediate steps be taken to provide a satisfactory and adequate water supply at the Gordon's Indian Residential School, Punnichy, Saskatchewan.

You are probably aware that drought conditions in the prairie provinces have resulted in a shortage of water at a large number of our residential schools. This condition has imposed upon our Surveys and Engineering Branch a somewhat difficult task in undertaking an unusually large number of surveys and investigations and in making reports and recommendations to the Department.

The records here indicate that the water supply at the Gordon's school was investigated during the fall of 1937 and the work recommended by Mr. Dempster, the engineer in charge, completed on November 19, 1937. At that time the well was excavated and lined and the intake extended. The relief obtained, however, was only temporary. The matter was again investigated by engineers during the summer of this year. The last report submitted by the Surveys and Engineering Branch, with certain specific recommendations, reached the Indian Affairs Branch on August 26. In this report the engineers recommended that a supply of water, sufficient to meet the needs of the school, be brought from Fort Lake, a distance of three miles, at an estimated cost of $10,000. Immediately following the receipt of this report the Director of the Indian Affairs Branch wired Dr. Robertson, Inspector of Indian Agencies, at Regina, reminding him that there was

no provision -

Right Reverend E. H. Knowles, LL.B., D.D.,
Bishop of Qu'Appelle,
Bishop's Court,
R e g i n a, Sask.

Indian Affairs. (RG 10, Volume 6311, file 654-5, part 8)

no provision made in the estimates of this year for the construction of the pipeline and improvements necessary to provide water at the Gordon's School. It was suggested to Dr. Robertson in this telegram that the possibility of having water conveyed to the school by tank be thoroughly investigated. This suggestion was offered in view of the comparatively late date at which the final report reached the Department and in view of the limited funds at the disposal of the Department for such work.

I simply desire to assure Your Lordship at this time that everything we can possibly do will be done to assist the Principal in securing the water necessary for his school during the fall and winter months and that it is my intention to recommend that a sum of ten thousand dollars ($10,000) be included in the 1939-40 estimates, with the object of carrying out the recommendations made by the engineers, following their last investigation of the water supply at the Gordon's school.

Yours sincerely,

RAH

At that time the well was excavated and lined and the intake extended. The relief obtained, however, was only temporary. The matter was again investigated by engineers during the summer of this year. The last report submitted by the Surveys and Engineering Branch, with certain specific recommendations, reached the Indian Affairs Branch on August 26. In this report the engineers recommended that a supply of water, sufficient to meet the needs of the school, be brought from Fort Lake, a distance of three miles, at an estimated cost of $10,000. Immediately following the receipt of this report the Director of the Indian Affairs Branch wired Dr. Robertson, Inspector of Indian Agencies, at Regina, reminding him that there was

SEP 12 1939
RECORDS

Ottawa, September 8, 1939.

Dear Bishop Knowles:

I have for acknowledgment Your Lordship's telegram of September 7, in which you ask that immediate steps be taken to provide a satisfactory and adequate water supply at the Gordon's Indian Residential School, Punnichy, Saskatchewan.

You are probably aware that drought conditions in the prairie provinces have resulted in a shortage of water at a large number of our residential schools. This condition has imposed upon our Surveys and Engineering Branch a somewhat difficult task in undertaking an unusually large number of surveys and investigations and in making reports and recommendations to the Department.

The records here indicate that the water supply at the Gordon's school was investigated during the fall of 1937 and the work recommended by Mr. Dempster, the engineer in charge, completed on November 19, 1937. At that time the well was excavated and lined and the intake extended. The relief obtained, however, was only temporary. The matter was again investigated by engineers during the summer of this year. The last report submitted by the Surveys and Engineering Branch, with certain specific recommendations, reached the Indian Affairs Branch on August 26. In this report the engineers recommended that a supply of water, sufficient to meet the needs of the school, be brought from Fort Lake, a distance of three miles, at an estimated cost of $10,000. Immediately following the receipt of this report the Director of the Indian Affairs Branch wired Dr. Robertson, Inspector of Indian Agencies, at Regina, reminding him that there was

no provision -

no provision made in the estimates of this year for the construction of the pipeline and improvements necessary to provide water at the Gordon's School. It was suggested to Dr. Robertson in this telegram that the possibility of having water conveyed to the school by tank be thoroughly investigated. This suggestion was offered in view of the comparatively late date at which the final report reached the Department and in view of the limited funds at the disposal of the Department for such work.

I simply desire to assure Your Lordship at this time that everything we can possibly do will be done to assist the Principal in securing the water necessary for his school during the fall and winter months and that it is my intention to recommend that a sum of ten thousand dollars ($10,000) be included in the 1939-40 estimates, with the object of carrying out the recommendations made by the engineers, following their last investigation of the water supply at the Gordon's school.

Yours sincerely,

(sgd) T. Crerar

DEPARTMENT OF INDIAN AFFAIRS
CANADA

Department of Mines & Resources
Indian Affairs Branch.
SEP 20 1938
RECORDS

IN YOUR REPLY REFER TO
No. 312-11 A CE
ALSO TO DATE OF THIS LETTER

COMMISSIONER'S OFFICE,
REGINA, SASK., Sept. 17, 1938.

Dear Sir:

I beg to attach Requisition for repairs necessary for repairing the two gasoline engines at the Gordon Residential School.

I find that they have two engines for the operation of the lighting plant, one 2½ horsepower and the other 6 horsepower. The 2½ horsepower engine is now out of commission, and the other is liable to go out any time if the repairs are not supplied. This would leave the school without any light. It has been the practice at the school to use the 2½ horsepower engine during light-load hours, using the 6 horsepower only when a heavy load was on. This made a considerable saving in the amount of gasoline and oil consumed. At the present time they have to use the 6 horsepower altogether.

These parts can be obtained only from the Mumford, Medland, of Winnipeg. If the parts are supplied the engineer of the school can install them. In checking over this school and buildings I find that the school itself has been calsomined and painted from top to bottom each year. The buildings have been kept in a splendid state of repair. The Principal has expended over $1000.00 from the school grant on repairs to outside buildings in the last three years, in addition to considerable work in repairs to machinery and piping on the inside. The water used for the school is very hard on the boilers and water pipes, demanding continual attention and repairs. A stock of connections and piping should be carried at this school in order that the engineer would be able to make the necessary repairs immediately the trouble develops, otherwise a heavy plumbing bill will be necessary in the near future.

Mr. Waddy has placed $1,000.00 in his Estimates for the school this year. In this amount is an allowance for those connections, etc.

Mr. Frayling is to be congratulated on the condition of the school and buildings and the amount of work he has done from school funds which otherwise would have been a charge against the Department.

I would recommend that this Requisition be allowed if at all possible, as otherwise the lighting plant will be put out of business.

Yours truly,

Thos. Robertson,
Inspector of Indian Agencies,
Saskatchewan.

Dear Sir:

Ref: Your Wire of September 7th, Water Conditions,
Gordon's Residential School.

I have discussed this matter with Mr. Waddy, Agent, and with the Principal, Mr. Frayling. There is sufficient water in the lake to supply the school for several years to come if a method for procuring that water can be evolved that will not cost too much.

Mr. Frayling is at present consulting with an architect at Punnichy. This architect was engaged on the construction of the building and installation of the water system formerly used. They have plans drawn and are now securing estimates on the cost of installing a similar system. These plans and estimates will be forwarded in a few days.

Yours truly,

Thos. Robertson,
Inspector of Indian Agencies,
Saskatchewan.

Dear Sir,-

Re: SCHOOL WATER SUPPLY.

After an inspection of the water supply at the Gordon School I find the following conditions;

The small lake east of the school from which all water is pumped covers an area of about thirty five acres, and from numerous soundings taken appears to have a fairly uniform depth of twelve feet; although several spots showed thirteen to thirteen and a half feet. The bottom shelves rapidly and at forty or fifty feet from the shore line this maximum depth is found. This area of water gives 8,447,000 gallons per foot of depth. At your present rate of consumption, 4,000 gallons per day, 35 acre feet of water is enough for six years. Of course there is the loss by evaporation which has been very marked during the past ten years. Since the school was built in 1922 the vertical drop in the surface of the lake has been about ten feet, but the water pumped in that time would not account for more than three feet of this assuming an annual consumption of 1,500,000 gallons. With a return of wet years the annual rainfall will naturally more than take care of the water used plus evaporation.

At the present time a 3" intake pipe runs out into the lake and water is pumped direct to the school, but with the falling level this pipe is now only four feet below the surface and very near the danger line from frost. You can see the advantage of doing away with this and having the pipe run well under ground to a reservoir or well which would be accessible at all seasons.

R. W. Frayling Esq.
Punnichy, Sask.

In order to insure the water supply being clean and adequate, and to take advantage of the full depth of water in the lake, I suggest that a fourteen feet well, seven by seven, be dug at the present water line where the 3" supply pipe enters the lake. This to be concrete lined, and concrete carried some three feet above water line, and suitable covered. The lake side of this well to be perforated to allow free flow of water into well, and from this side a five feet wide trench be dug out into the lake to depth of ten feet. This trench to be filled with field stoen, gravel, and sand to act as a filter bed. It will of course be necessary to crib out into the lake about fifty feet and pump water from crib before excavating trench and refilling with filter material. After this has been completed the whole end of the crib may be removed to allow lake water to flow through filter bed.

I have prepared a sketch of the work suggested, and have also secured a preliminary estimate of the work from Mr. Johns of Messrs. Smith Bros. & Wilson, Regina. His figure is $1,700.00 which might be reduced if the work were undertaken on a cost-plus basis.

Yours faithfully,

Dear Sir:

I am in receipt of your letter of the 17th instant with reference to the repairs required for the two engines which operate the lighting plant at the Gordon's Indian Residential School.

It appears from your letter that these repairs are required immediately and you may arrange for their purchase from Mumford, Medland, Winnipeg. I enclose copy of the purchase requisition which you forwarded.

I note from the latter part of your letter that the Indian Agent is requesting us to provide $1000.00 in the estimates for the fiscal year 1939-40 to cover improvements at the Gordon's School. His request will receive careful consideration when we are preparing our estimates.

Yours truly,

Memorandum:

DIRECTOR

Surveys & Engineering Branch

Re: Water supply, Gordon's Indian Residential School, Punnichy, Sask.

I received your memorandum of August 23 in connection with the above and it was noted that Mr. Dempster estimated that it would require an amount of $10,000.00 to provide an adequate water supply at the Gordon's School.

As this amount of money is not available at the present time I did not reply to your memorandum. Recently we have received urgent representations from the Church authorities who are associated with us in the conduct of this school urging that some steps be taken immediately to provide an adequate water supply. Today I am in receipt of a letter from the Principal enclosing a proposal that he has received from Mr. W. Swan. I enclose, for your information, copies of the letters that have reached us, also the sketch of the work that Mr. Swan suggests should be carried out.

You will note that Mr. Swan's suggestion would only involve an expenditure of $1700.00 and if practicable this Department would be prepared to provide that amount of money.

As the matter is urgent I would appreciate it if you would arrange to have Mr. Swan's proposal receive immediate consideration and let me know your opinion of it.

COMMISSIONER'S OFFICE,
REGINA, SASK., September 20, 1938.

EX'D.

Dear Sir:

With further reference to your wire of September 7th and my #312-11A CE of September 17th, re water conditions, Gordon's Residential School: I am now in receipt of a letter from Mr. Frayling, Principal, attaching a map and blue-print prepared by Mr. Swan, showing what in their opinion is the solution to the water problem at that school.

I might point out that this is the same system as was installed at the time the school was built, and they claim it worked perfectly until the lake receded below the intake.

With regard to hauling water to supply the school, the nearest water available for the purpose would be about three miles distant, and a road would have to be constructed for the purpose. Water might be secured in the lake adjoining the school, but in that event it would necessary to build a reservoir something similar to the one suggested in this plan, into which the water could be first placed and then drawn through a filter, as the water as it comes from the lake is unfit for human consumption.

It would appear to me that the plan suggested would be the best and most economical. I might point out that Mr. Swan is an architect and worked on this school when it was being constructed.

Mr. Frayling's letter and Mr. Swan's report and blue-print are attached.

Yours truly,

Thos Robertson

Memorandum:

Dr. McGill

Re - Water supply, Gordon's Residential School, Punnichy, Saskatchewan.

Our Engineer, Mr. Dempster, was instructed to investigate the suggestions of Mr. W. Swan in regard to augmenting the water supply for the above school. You will no doubt be interested in Mr. Dempster's preliminary report by wire. He states that there is a large discrepancy between lake bottom levels, as shown by Mr. Swan, and those taken in the field. At the same time, Mr. Dempster does not agree with the gravel gallery as suggested and believes the most suitable method is to construct a good concrete well connected to the lake by universal joint pipeline in as deep water as can be found. Mr. Dempster is having necessary field levels and information checked up and will wire the cost of his proposal as soon as possible.

EX'D.

Ottawa,
October 6, 1938.

Memorandum:

DIRECTOR

Surveys & Engineering Branch

Re: Water supply, Gordon's
Residential School, Punnichy, Sask.

I am in receipt of your memorandum of September 30 in connection with the above and note that in a preliminary report by wire Mr. Dempster does not agree with some of the suggestions made by Mr. Swan.

If it can be arranged without unnecessary delay I feel that it would be advisable for Mr. Dempster to arrange a joint meeting with Venerable Archdeacon Irwin, Mr. Swan and Dr. Robertson, Inspector of Indian Agencies, in order that the matter may be discussed from all points of view.

For your information I may add that the Gordon's Residential School is conducted under the auspices of the Church of England Diocese of Qu'Appelle and the Bishop of this Diocese directed Venerable Archdeacon Irwin to come to Ottawa ten days ago with instructions to remain here until he received definite assurance that immediate steps would be taken to improve the water supply. At that time Archdeacon Irwin interviewed Mr. C. W. Jackson, Secretary and Chief Executive Assistant, also the officials of this Branch and was definitely advised that immediate action would be taken to improve the water supply at the Gordon's School.

As you can realize the question of the cost of improving the water system is a most important one to this Branch, especially in view of the fact that no funds were specifically provided for this purpose in the current year's appropriation and any expenditure that is made will mean that disbursements at other Indian Residential Schools will have to be curtailed. It is for this reason that I am suggesting in the first part of this memorandum a joint interview as it might result in arranging for the installation of a water supply at a much less cost than Mr. Dempster's original estimate about which you wrote me in your memorandum of August 23.

I might add that Archdeacon Irwin was definitely of the opinion that unless water could be immediately secured in conformity with the plan submitted by Mr. Dempster or Mr. Swan the school would have to be closed and the children returned to the Reserve.

REPORT RE WATER SUPPLY

Gordon's Residential School, Punnichy,
Saskatchewan.

With reference to the water supply for the above school, the area of the lake from which the water is taken is approximately twenty-four acres as compared to thirty-five acres mentioned by Mr. M. Swan. The enclosed plan shows the traverse of the lake and also the profile of the lake bottom taken by Mr. Lazorka. You will note that Mr. Swan states that a depth of twelve feet is found at forty or fifty feet from the shore line. From Mr. Lazorka's soundings it can be seen that a depth of twelve feet is reached at a distance of one hundred feet from the shore.

With reference to the suggestion made by Mr. Swan to filter the water through a gravel and stone gallery to the well, there is no doubt that if it would work the water would certainly be improved. However I am afraid that the black muddy bottom would eventually plug up the sand (how long this would take I have no idea) and affect the flow through the porous gallery.

It would certainly be advantageous if the water could be filtered somewhat as it is very poor and, according to the Principal, even with the pressure filters in the school itself small particles are present.

To my mind there are two alternatives:-

1. Construct a concrete well with approximately 200 feet of 5" inlet pipe (flexible joints to permit laying from surface of lake). The end of the pipe would have a clearance of 3.0 feet above the lake bottom and would be subjected to a head of approximately 10 feet of water (see sketch). A well of approximately the size mentioned by Mr. Swan, 7' x 7' would have sufficient capacity to permit a certain amount of settling of the solid particles. A valve would be installed to permit the dewatering of the well so cleaning of sediment can be done.

   The pipe sections above the lake bottom would be supported by cable suspended from piles driven well into the lake bottom. A small cat walk of timber would be placed upon the piling to permit the raising of the end of the flexible jointed pipe should it prove necessary to clean the screen at any time.

   From the profile it may be seen that it is not necessary to carry the pipe any further than 130 feet from the shore line. However an additional 40 feet is suggested in order to allow hoisting of the flexible pipe. I have written for information regarding the maximum attainable angle of flexibility of two types of this pipe and, should it be found that a shorter length of pipe would suit, it would be used.

2. The suggestion made by Mr. Swan could be carried out at an increased cost due to the fact that his soundings were evidently in error. Also the 6" concrete wall shewn on his sketch would certainly not be sufficient to withstand the semifluid pressure due to the type of earth and water existing at the site.

Indian Affairs. (RG 10, Volume 6311, file 654-5, part 8)

POOR COPY

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

Library and Archives Canada / Bibliothèque et Archives Canada
www.collectionscanada.gc.ca

As I have already mentioned, I would be afraid of the black muck bottom settling in and plugging the sand filter bed. In order to cope with this I would suggest that, while the cofferdaming is being done and the gravel and stone being laid, a pipe line as suggested in No. 1 above be installed as a precautionary measure against the plugging of the sand filter. The additional cost of this would be only the cost of the pipe and valve plus the labour of laying the pipe as the cofferdam work would have to be carried out in order to construct the gallery.

The main disadvantage of this would be the inability to bail out the well to permit cleaning. However this could be overcome by having two separate chambers to the well, one for Mr. Swan's proposal and the other containing the 5" pipe line inlet.

Below is a cost estimate of the two proposals:-

Estimate of Cost, Proposal No.1

7' x 7' x 16' Concrete Well 12" reinforced wall	$540.00
5" flexible joint pipe, valve and fittings	400.00
Cofferdam work including excavation	660.00
Laying of pipe and constructing catwalk	150.00
Contingencies	50.00
Total	$1800.00

Estimate of Cost, Proposal No. 2

Concrete well, 4' x 10' x 18' (with two chambers)	650.00
5" flexible joint pipe, valves & fittings	400.00
Laying pipe and catwalk construction	150.00
Cofferdam work & excavation	1000.00
150 c.yds. of graded rock and sand fill to a depth of 10 ft. below water level at $3.00 per yard in place	450.00
Contingencies	200.00
Total	$2250.00

Owing to the uncertainty of cofferdam work, it is necessary to be on the safe side in estimating and I believe the above figures are such. If no great difficulties were encountered, the work might be done for somewhat less than the figures above. Should the Department see its way clear to provide funds for Proposal No. 2, I believe it should be tried. However I would not guarantee the effectiveness over a long period of years of the gravel gallery.

According to the area calculated by Mr. Lazorka of twenty-four acres, this gives a figure of approximately 5,790,000 gallons of water per foot of depth. This, of course, does not take into account the receding of the shore line. Also, in spite of the exceptionally wet year, the water in the lake has lowered a foot. I believe that,

Indian Affairs. (RG 10, Volume 6311, file 654-5, part 8)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

POOR COPY

www.collectionscanada.gc.ca

due to the condition of the subsoil, it will take at least three or four years of good rainfall to put the ground water table back to its normal level and hence until it reaches that level very little runoff can be expected. At the present rate of lowering, during a four year period the water will have receded four feet and by that time, if such thing happens, it may be necessary to look elsewhere for water to replenish the lake; if dry years occur, it may be necessary much sooner.

As far as the two proposals are concerned, No. 1 will provide ample water and is less expensive than No. 2. However the filtering of the water in by method No. 2 would be very useful providing (as I have already mentioned) that the black mucky bottom does not plug up the filter bed. Of course this still would not leave the school without water but would only mean the money spent on this part was wasted. If the Indian Affairs Branch have sufficient funds to permit method No. 2 being carried out, I would suggest it be tried out; if not, then method No. 1 should be used.

The water is so bad in the lake that the pipes corrode up and hence I have suggested a 5" line to the lake, not that it is required for the quantity of water but rather to safeguard against the plugging up of the line.

With reference to the work, there is no immediate danger of the present pipe freezing, providing the new work is completed before the end of January. There is only three feet of water over the present pipe and, should there be a very cold winter, the suction line would certainly be endangered.

It is also essential that some reputable firm be given the work either on a cost plus basis or by contract. Possibly by contract would be the most satisfactory as far as cost is concerned because in connection with the driving of sheet piling I recall Mr. Field mentioning that considerable boulders were encountered. The work could be most economically carried out once the ice was thick enough to withstand the weight of any equipment such as piledrivers, etc. that might be required although the work on the well itself could be done any time and the cost of concrete would be less than if winter precautions had to be taken.

As soon as a decision has been made as to which proposal is to be used, if you will notify me I will prepare more detailed plans and figures such as would be required for contract work. The prices on the flexible pipe are only approximate as the correct figures have not been received from the company.

SURVEYS & ENGINEERING

AB. I.A.1580-4

October 17, 1938.

MEMORANDUM: MR. WARDLE

Re: Water Supply, Gordon's Residential School, Punnichy, Saskatchewan.

As requested in your memorandum of the 11th instant Mr. Dempster was instructed to arrange a joint meeting with Venerable Archdeacon Irvin, Mr. Swan and Dr. Robertson, Inspector of Indian Agencies. A wire has now been received from Mr. Dempster which reads as follows:

> "Retel fourteenth STOP Doctor Robertson away for approximately a week Will contact him as soon as he returns to try and arrange joint meeting STOP Leaving for Flin Flon today as work is almost completed there STOP Will advise you regarding joint meeting".

With further reference to this project, I may say that a report has also been received from Mr. Dempster dealing particularly with Mr. Swan's proposal as submitted to the Indian Affairs Branch. A copy of this report with blueprint sketch plan is attached. It will be noted from this report that in Mr. Dempster's opinion the suggestion made by Mr. Swan could be carried out at an increased cost. This increased cost being due to the fact that Mr. Swan's lake soundings were evidently in error. Also Mr. Dempster is of the opinion that the 6" concrete wall proposed by Mr. Swan would not be sufficient, and should be made stronger to withstand the semi-fluid pressure due to the type of earth and water existing at the site.

Encl.

Another point that Mr. Dempster is very doubtful of is the permanency of results that might be obtained from endeavouring to sand filter the water. He is of the opinion that owing to the quantity and nature of the matter held in suspension in this lake water, that a sand filter would soon become clogged and useless. Mr. Dempster suggests two schemes, one at an estimated cost of $1800.00 and the other at an estimated cost of $2250.00. The only difference between these two proposals is that the latter one would try out the sand filtering scheme and if found feasible same could be continued. However, if a failure then the scheme would operate as Proposal No. 1.

Under the circumstances it is recommended that if the Indian Affairs Branch wish to have anything done at this point they should be requested to provide funds for Proposal No. 2, namely, $2250.00. For the additional $450.00 over Proposal No. 1, it is felt that it will be well worth while to try the sand filtering idea.

Respectfully submitted,

T.S. Mills

Memorandum:

Dr. McGill

Re: Gordon's Residential School water supply, Punnichy, Sask.

With further reference to the above, I am forwarding herewith a copy of a memorandum from the Chief Engineer together with a copy of Mr. Dempster's report, and a blueprint sketch.

It will be noted that up to the present time Mr. Dempster has not been able to arrange a joint meeting with the Venerable Archdeacon Irvin, Mr. Swan and Dr. Robertson on account of the absence of the latter and that it is expected that the meeting will take place as soon as possible.

In the meantime Mr. Dempster has suggested two alternatives, one at a cost of $1,800 and one at $2,250. These are now submitted for your consideration. It is recommended by our Engineers that proposal No. 2 be accepted.

Dear Sir,-

Re: WATER SUPPLY.

I am in receipt of a letter from the Ven. Archdeacon J. K. Irwin - Chairman of the Qu'Appelle Diocesan Indian Committee, in which he remarks that those he interviewed at Ottawa regarding the above matter were reluctant to approve of my plan for the reason it had not been approved by the Department's own Engineer. Permit me to state that it was suggested by Dr. Thos. Robertson, Inspector for Saskatchewan when I was in his Regina office regarding the shortage of water, that he had received a letter from Ottawa relating to the suggested $10,000.00 proposal by your Mr. Dempster and that this sum could not be considered by the Department at this period. During conversation he then asked me to give my opinion. I replied that on a previous occasion I had made a plan for draining a lake into the one we use, and Mr. Graham the then Indian Commissioner as much as said it was not my business.

Dr. Robertson then said no one could object to a suggestion. I then went to work immediately. The result being the finding of quantity of water etc. etc. by Mr. W. Swan (local architect), which I mailed you with Blue Print. I very much regret having taken this step, but again it was purely in the interest of this School's wants, for which purpose I presumed I am here. There is no implication and the cost of the survey will be paid by the School.

Concerning the 110 volt glass jar Lighting Batteries at Gordon's Indian Residential School, Punnichy , Sask. ;

Some time ago we checked these batteries and were of the opinion that if the sediment were removed from the cells and the Electrolite brought to the proper density, the battery might give considerable service.

However, after opening some fourteen of the cells, we find that the active material is entirely shed from many of the positive plates and that the negative plates are spongy, and would not give good service even if the positive plates were replaced.

We therefore recommend that a new set of batteries should be installed as soon as possible, as the condition of the present battery will necessitate almost continuous running of one of the generators. We also notice that the commutator of the small generator is in very bad condition and will require to be turned down and properly undercut.

Mr. J.W.Waddy,
Indian Agent,
Punnichy, Sask.

Dear Sir;

I am enclosing a quotation on two different sized batteries. Would strongly recommend the larger size.

The prices quoted are exchange prices, that is, we take the old battery, and instal the new ones, F.O.B. the School.

The Globelite Company have promised quick delivery in case the Department decides to take them from me. Thank you.

Yours truly,
Alex. Shaw.

INSPECTOR OF INDIAN AGENCIES

CANADA
DEPARTMENT
OF
MINES AND RESOURCES

INDIAN AFFAIRS BRANCH

File 312-11A CE

Regina, October 29, 1938.

Dear Sir:

I am in receipt of a letter from Mr. Waddy, Agent, Touchwood Agency, which reads as follows:

"I have the honor to report that the batteries at the Gordon Indian Residential School, used in the lighting plant, are out of commission. These were supplied in September 1935, see your file 312-11A C.E. of 9th Sept. 1935. They cost then the following:

Batteries less discount and allowance	577.58
Freight	44.15
Expert's expenses for installation	11.00
	$ 632.73

"I have got a quotation, which is enclosed, from A. Shaw of Lestock, agent for Globelite for new set of 56--252 ampere hour capacity batteries installed: $ 636.00

"The batteries are urgently required."

When at Gordon's School this summer, Mr. Waddy drew my attention to the fact that these batteries were going down. We discussed the matter with the engineer, and while he stated they were going down, the feeling was that they might carry through for the yeer. Since then they have had Mr. Shaw of Lestock go over the batteries to see if removing the sediment and bringing the electrolyte up to the proper density would not make them continue to give service. Mr. Shaw's report is attached. In his opinion this cannot be done. Mr. Shaw has submitted prices on two different batteries, one of 168 Ampere Hour capacity for $418.00 and one of 252 Ampere Hour for $636.00, and strongly recommends that the heavier battery be installed.

I am attaching with Mr. Shaw's report, his quotations and Touchwood Agency Requisition for batteries.

Yours truly,

Thos. Robertson,
Inspector of Indian Agencies,
Saskatchewan.

Ottawa,
November 3, 1938.

EX'D.

Dear Sir:

I am in receipt of your letter of the 29th ultimo with reference to the batteries at the Gordon's Indian Residential School. I also note the report from Mr. Shaw who quotes a price on new batteries.

No funds were specifically provided in the current year's appropriation for batteries for this school and in addition we have found it necessary, owing to the water situation, to expend a great deal more at this school than we anticipated at the time of the preparation of the estimates. Our funds for the current fiscal year are practically assigned and if it is found necessary to supply new batteries at the Gordon's School it will mean that some other school will have to be deprived of something required.

I should appreciate it, therefore, if you would request Mr. Waddy to consult the engineer at the school again with a view to ascertaining if he can make the batteries last for another year. I note that the present set of batteries was only supplied in 1935 and it is felt that with careful supervision it should not be necessary to renew them at the present time.

Yours truly,

R. A. Hoey,
Supt. of Welfare & Training.

REPLY'D.

IN YOUR REPLY REFER TO
No. 312-11A CE
ALSO TO DATE OF THIS LETTER

COMMISSIONER'S OFFICE,
REGINA, SASK., November 2, 1938.

DEPARTMENT OF INDIAN AFFAIRS
NOV 5 1938
RECORDS

Dear Sir:

Ref: My #312-11A CE of October 29th,
Lighting Plant, Gordon's School.

Mr. D.H.B. Bradford of Blake's Battery Service, 2047 Broad Street, Regina, called at this office to-day to discuss the batteries at the above School.

Mr. Bradford says he has had 30 years' experience in battery work. He states these batteries can be rebuilt, and would give good service. He states that a negative plate will wear out two or three sets of positives, and that it is the practice in large concerns to have the batteries rebuilt. Mr. Bradford submits the following offer for rebuilding these batteries, and claims that if rebuilt they will give just as long a service as they did previously:

	MATERIAL:		
336	Positive Plates	194.88	
50	Negative "	27.50	
672	Wood Separators	40.32	
460	lbs. Electrolyte	32.20	
	Total material		294.90
	Labour		87.50
	Travel Expenses		20.00
	Total cost of rebuilding batteries:		$ 402.40

Welding gas and Burning bars are included in the Labour charge.

Mr. Bradford has been highly recommended to me as a man who is thoroughly reliable and who knows his business. He informs me that he would rebuilt about 10 cells per day, and that there would be no need to discontinue the service, as he has cells that he would take along to fill in in the meantime.

I would recommend that his offer be given serious consideration.

Yours truly,

Thos. Robertson,
Inspector of Indian Agencies,
Saskatchewan.

The Secretary,
Dep't of Mines & Resources,
Indian Affairs Branch,
Ottawa.

NOV 12 1938
RECEIVED

Regina, November 9, 1938.

Dear Sir:

I beg to attach Touchwood Voucher No.414A in favour of W. Swan, Architect, Punnichy, for $27.00.

Mr. Swan was employed by either the Department or the Contractor on the Gordon's School when it was built. Last Summer Mr. Frayling, the Principal, called Mr. Swan in and consulted him on the water situation, as he (Mr. Swan) had had considerable to do with the installing of the old system. Mr. Swan inspected the water supply and prepared a plan and report, which were forwarded to the Department. About 10 days ago I received a telephone call from Mr. Dempster, who stated that he had received instructions from his Department to arrange for a conference with Mr. Swan and Archdeacon Irwin, and he asked me to arrange with Mr. Swan to meet him in Regina, which arrangement was made.

The above is in explanation of this account, which I trust the Department will find satisfactory. I would recommend that the account be paid.

Yours truly,

Thos. Robertson,
Inspector of Indian Agencies,
Saskatchewan.

Nov. 7, 1938

Mr. D. H. Blake Bradford,
Suite 2,
1745 Scarth St.,
Regina, Sask.

Dear Sir:

I understand you are tendering on rebuilding type W.13 Globelite battery for the Indian Department and that they are asking some reference in connection with your ability to handle such work.

I am pleased to state that when engineer of the Department of Telephones, we used you for rebuilding some of the batteries of that organization which apparently had reached the stage when a replacement was absolutely necessary. The rebuilt batteries were entirely satisfactory and met all the guarantees you furnished and resulted in an appreciable saving in costs.

Yours truly,

S.R. Parker
Engineer

Regina, November 8, 1938.

Dear Sir:

With further reference to my #312-11A CE of November 2nd, regarding batteries, Gordon's School: Since I wrote the above letter, one of the battery representatives called at this office and I enquired of him as to the possibility of rebuilding these batteries. He claims the time, labour and material involved make it impossible to economically rebuild them. He also states that if the re-charging of the battery is not done under proper supervision, the life of it is very short.

In the meantime, however, Mr. Bradford has called again and left a letter which states that Mr. Bradford has rebuilt batteries for the Saskatchewan Department of Telephones, which were entirely satisfactory and resulted in an appreciable saving.

Personally I know nothing about batteries, but am passing this along for your information.

Yours truly,

Thos. Robertson,
Inspector of Indian Agencies,
Saskatchewan.

Dear Sir:

Ref: Your #121-1-5 of November 3rd,
Batteries, Gordon's Residential School.

I have taken the above matter up with Agent Waddy, who reports that he visited this School and found the batteries were out of use, and the engine running all the time they use the lights.

He states it will be necessary to get new batteries or have the present ones rebuilt.

Yours truly,

Thos. Robertson,
Inspector of Indian Agencies,
Saskatchewan.

Memorandum:

DEPUTY MINISTER

I attach purchase order for a new set of batteries for the Gordon's Indian Residential School.

As this set of batteries will probably cost over $500.00 I should appreciate it if the Honourable the Minister would give his approval for the purchase.

The batteries at present in use were supplied in 1935 and in a letter recently received from Inspector Robertson he states that these batteries are practically useless at the present time and must be replaced immediately.

[illegible]. Hoey

In connection with your memorandum of the 25th instant, your file No. 121-1-5, and requisition for one set of batteries, 56 cell, 252 a.h. for the Gordon's Residential School, I may state that I have been asked to ascertain why the old set is worn out in such a short time. I would therefore appreciate receipt of the following information from you:-

(a) The make and description of battery supplied in 1935.

(b) The cost of same.

(c) From whom purchased.

(d) Remarks or explanation, if any, from the Principal of the School, or from Mr. Waddy, Indian Agent, which would have a bearing on the question indicated in Paragraph 1 above.

EX'D.

Ottawa,
December 1, 1938.

Memorandum:

MR. BAILEY

With reference to your memorandum of November 29 regarding the set of batteries ordered for the Gordon's Indian Residential School I trust that the following is the information that you require:

(a) 1 W13, 13 plate 252 ampere hour battery

(b) Cost of battery .....$ 787.50
Allowance for old battery 42.00

745.50

Discount 20-5%
Net cost .....$ 577.58

Freight on battery from
Winnipeg to Punnichy 44.15

Total cost .....$ 621.73

(c) Battery purchased from Mumford Medland, Limited, Wall Street & Portage Avenue, Winnipeg, Man., invoice dated August 13, 1935.

(d) Inspector Robertson's first letter requesting a new set of batteries for the Gordon's School was dated October 29 and I wrote to him on November 3 with a view to ascertaining why new batteries were required and also asked him if it would be possible to make the present batteries last for another year.

Inspector Robertson replied in a letter dated November 12 stating that he had again discussed the matter with Indian Agent Waddy who reports that he visited the school and found that the batteries were out of use. This necessitated running the engine every time lights are used.

From the information received from Inspector Robertson it would appear that a new set of batteries is absolutely essential.

My #312-11ACE, " 12th.
Batteries Gordon Residential School.

I beg to advise that I have to-day had a telephone call from Mr. Waddy stating that for the last two months the lights of the Gordon School have been run directly from the engine. That is, the engine is running continuously when the lights are on. Mr. Waddy stated that if this condition is allowed to continue it will only be a short time until extensive repairs or a new engine will be necessary.

If funds are at all available, new batteries should be supplied or the old ones rebuilt at the earliest possible date.

Yours truly,

Thos. Robertson,
Inspector of Indian Agencies,
Saskatchewan.

Dr. McGill

Re - Water supply, Gordon's Indian Residential School, Punnichy.

In reference to the above work which is being undertaken on a cost-plus basis by Mr. W.H. McDiarmid, Contractor of Regina, I am quoting herewith from a telegram received from our Engineer, Mr. Dempster:-

> "Gordons Residential School STOP Cofferdam excavation completed and twenty feet of cast iron pipe laid STOP Before more could be completed dam gave way in quicksand section STOP Lazorka informs me cost to complete laying of pipe would be prohibitive as it would necessitate redriving much of the cofferdam in bad foundation conditions due to washout STOP He informs me that flow through filtration gallery already completed is more than adequate to supply school STOP Have instructed Lazorka to complete gallery and abandon laying cast iron pipe STOP Will try and obtain credit for remainder of pipe STOP Kindly advise by wire if my action approved."

As I advised you by telephone this morning, in view of the circumstances, we have approved Mr. Dempster's action. Fortunately, there has been a great improvement in the flow of water and as long as this is maintained, the requirements of the school will be satisfactorily met.

For your information I might say that Mr. Lazorka is a graduate Engineer and Assistant to Mr. Dempster.

File 312-11A CE

Regina, February 2, 1939.

Dear Sir:

Ref: Your 121-1-5 of January 24th,
Water Supply, Gordon's School.

- - - - - - -

The school had some difficulty after the contractors had completed the work, due to the fact that they had only covered the pipes to a depth of 3½ or 4 feet, allowing them to freeze. There was also a leak in two or three of the couplings.

The Principal got some men, uncovered the pipes, tightened up the couplings, and covered the pipes to a greater depth. They have had no trouble since. I was talking to Mr. Frayling yesterday and he informs me the water supply is quite satisfactory at the present time.

Yours truly,

Thos. Robertson,
Inspector of Indian Agencies,
Saskatchewan.

The Secretary,
Dep't of Mines & Resources,
Indian Affairs Branch,
Ottawa.

Mr. Boston-
per ak auditor.

Ottawa,
February 11, 1939.

Dear Sir:

I am in receipt of your letter of the 2nd instant referring to your letter of November 9 with which you enclosed an account in favour of Mr. W. Swan.

Mr. Swan was not engaged by the Department to do any work in connection with the water situation at the Gordon's Indian residential school. Under these circumstances it is not possible for us to favourably consider payment of his charges for inspecting the water supply and preparing a plan and report of proposed changes.

However, you were instructed to have him proceed to Regina to discuss the water supply with Mr. Dempster and yourself and in view of this it is felt that it is only fair that we should allow payment of the item of $12.00. This amount will go forward to Mr. Swan.

Yours truly,

R. A. Hoey,
Supt. of Welfare & Training.

File 312-11A CE

Department of Indian Affairs
MAR 13 1939
RECORDS

Regina, March 10, 1939.

Dear Sir:

Mr. Waddy writes that the Poorman's Band are asking that there be erected, at the Gordon's School, a shed for horses and a shack for the people who visit the school to see their children. He states that so far as the Principal is concerned, there is little chance of him putting up shelters, as aside from the cost, he feels it upsets the pupils to have their parents hanging around.

The erection of such a building would no doubt be of considerable benefit to both the horses and the people, but if not under complete control, it would prove a nuisance. Lebret School has, in my opinion, the best system in this respect that I have met with, but there the Indians provide their own food and fodder, and are only allowed to remain, I think it is 24 hours.

With regard to this request, if it is favourably considered, I think the Band should be required to do the work themselves and pay for any material required out of their own Band Funds.

Yours truly,

Thos. Robertson,
Inspector of Indian Agencies,
Saskatchewan.

Ottawa,
March 21, 1939.

Dear Sir:

I am in receipt of your letter of the 10th instant with reference to erecting at the Gordon's school a shed for horses and a shack for the people who visit the school to see their children.

If such a building were erected I know you will agree with me that it would have to be kept under very close supervision. This would hardly be possible if the building were erected from Band funds as the Indians would probably consider that they had special privileges when they had provided the cost of the building.

Taking everything into consideration I feel that it is inadvisable to consider the erection of such a building at the Gordon's school at the present time.

Yours truly,

R. A. Hoey,

Dear Sir;-

Re letter 121-1-5 of May 31 1938 regards an old bake oven at this place.

Nothing has been done about disposal of this oven since you wrote last.

I enclose a letter received from a Mr. W.G.Latta offering $25.00 for the oven, this chap keeps a few foxes and thinks he could cook some food for the animals if he got the old oven.

If the matter is referred to the salvage department they might accept this offer.

Mr. Waddy
Indian Agent
Punnichy, Sask.

Dear Sir:

I understand that second hand pie oven stored at the agency might be for sale.

As it isn't good for baking bread it isn't worth much but it would be worth $25.00 to me.

If they want to sell it, would you let me know soon.

Yours truly,

W. G. Latta.

Memorandum:

EX'D.

MR. BAILEY

There is an old bake oven at the Touchwood Indian agency, Punnichy, Saskatchewan, which has not been used for some years. This oven was at one time used at the Gordon's Residential School but has not been in operation for several years.

The Indian Agent, Mr. J. W. Waddy, Punnichy, Sask., advises that he has received from Mr. W. G. Latta an offer of $25.00 for this oven. Mr. Waddy considers that this is a fair price and recommends acceptance.

I enclose Mr. Latta's offer and would appreciate your advising what action you desire taken in the matter.

Indian Affairs Branch
JUL 10 1939
REGISTERED

Regina, July 6, 1939.

Dear Sir:

I am in receipt of a letter from Mr. Waddy, Touchwood Agency, advising that the stucco on the exterior of the Farming Instructor's house at the Gordon Indian Residential School is in bad shape, a lot of it being off altogether, and the covering coat is crumbling and should be repaired.

He states the plasterer there is Mr. W. R. Johnstone, who is on the approved list. Mr. Johnstone is asking $20.00 for labour. He would also supply the necessary gravel for $2.50, water for the job at $1.25, and cement from the N.A.L. company there would be (8 sacks) $9.60. This makes a total of $33.35.

The above work would include taking off all loose stuff from wall, repairing all bare spots, and refinishing with pebble dash.

Mr. Waddy says that the work should be done if funds are available. There is no doubt this work is necessary. I would, however, draw attention to the abominable, I might say criminal, condition that exists, when after spending millions of dollars in educating and establishing the Indians, our Agents and School Principals have to employ white labour to do work which the Indians should have been taught to do themselves. The Indians protest against this condition and are quite justified in doing so. I now think it is time for the Department to take a firm stand and notify both our Agents and our Principals that all future work of this kind must be done by the Indians. If they have no Indians competent to do this work, it is up to them to teach the Indians to do so, and I have no hesitation in saying that there are men on the Reserves who can do it.

Yours truly,

Thos. Robertson,
Inspector of Indian Agencies,
Saskatchewan.

Memorandum:

Mr. Christianson.

I am forwarding, herewith, in duplicate, an account received from W.H. McDiarmid for expenditure incurred in return of equipment from Gordon Indian School Punnichy to Regina, totalling $94.39.

Encl.

It will be noted that freight on shovels, etc., $5.74 has been struck out, this is due to the fact that we have not yet been able to obtain a voucher for same. Should it be received, it will be forwarded to you later.

The payments of $1.00 re use of saw and $10.00 to cover time loading and unloading have been struck out as they are not being allowed.

As we have no funds transferred this year to this Service for Gordon Indian School, I am forwarding this account to you for attention.

Memorandum:

Mr. Christianson

These Were Refused
to Agent. Letter returned on

On the 3rd ultimo I forwarded you, in duplicate, an account received from Mr. W. H. McDiarmid for expenditure incurred for return of equipment from Gordon's Indian Residential School, Punnichy, to Regina. At that time the freight on shovels, iron, pipes, etc., was struck out as a voucher had not been received to cover same. I am now enclosing herewith voucher received from the Canadian National Railways and would ask to kindly have cheque for the sum of $5.74 forwarded to Mr. McDiarmid.

Sept 13 1939

Dear Sir;-

Re letter 121-1-5 of Sept 1st regards enclosed account of $94.39 submitted by W H McDiarmid of Regina, Sask., for services returning equipment from Gordon Indian Residential School to Regina etc.

Although I know about this affair I have no responsibility regards it. Just about the time it happened a phone message was received at this office from Inspector Robertson, Regina, asking that I get quotations from local people to do this work. Before I could do this I found that the material had already been removed by Mr. McDiarmid. This information was given to the inspector.

If the account is sent to Dr. Robertson he will no doubt be able to handle it, he probably has necessary authority from some source for the expenditure.

Your obedient servant,

Indian Agent.

Ottawa,
September 20, 1939.

EX'D.
A.

Dear Sir:

The attached account was recently forwarded to the Department and I sent it to Indian Agent Waddy for a report.

In a letter dated September 13 he returned the account and writes as follows:

"Although I know about this affair I have no responsibility regards it. Just about the time it happened a phone message was received at this office from Inspector Robertson, Regina, asking that I get quotations from local people to do this work. Before I could do this I found that the material had already been removed by Mr. McDiarmid. This information was given to the inspector.

"If the account is sent to Dr. Robertson he will no doubt be able to handle it, he probably has necessary authority from some source for the expenditure."

Yours truly,

R. A. Hoey,
Supt. of Welfare & Training.

Regina, Sask., Sept. 23, 1939.

Dear Sir:

Reference your 121-1-5 of Sept. 20th.
Attached account of W. H. McDiarmid .

This account is in connection with the work done at the Gordon School last year for the purpose of securing a water supply. This work was handled by the engineering department through their engineer Mr. Harry Demster of the Prince Albert National Park. The contract was on a cost plus basis but owing to the snow coming before the work was completed it was impossible to return the equipment to Regina until this spring.

Mr. Demster informed me at one time during the winter that McDiarmid in his opinion was asking an excessive price for the return of the equipment and that he was trying to get him to cut it down. Some time this last spring the Engineers Office at Prince Albert National Park called me by phone and asked me to secure prices from some of the local cartage people on moving this equipment back to Regina. I called Mr. Waddy by phone and asked him if there were any cartage people there who could move this equipment and if so to secure prices. I did this as I considered we could get a better price from a man at Punnichy than we could from local concerns as they would no doubt use Indian labor where the Regina people would take their van from Regina. Mr. Waddy agreed to do this but, about an hour later informed me that the goods had already been taken away and I notified the engineers at Prince Albert of this fact.

This work was all done by the Engineering Department and under their supervision. Neither the Agent

nor myself had any authority. Consequently no authority was given by us for any expenditure. The only action we took was to give the engineers any assistance possible.

Voucher returned herewith.

Yours truly,

Thos. Robertson,
Inspector of Indian Agencies.
Saskatchewan.
